FRANKFURT, West Germany — Chrysler Corp. has asked its West German dealers to stop re-exporting Jeeps to other European countries — a controversial practice that has inflated the company's official registration figures in Germany.

Chrysler concedes that some of its dealers here are registering Jeeps themselves and then quickly de-registering the units before re-exporting them.

West Germany's official new-car registration agency, the Kraftfahrt-Bundesamt, recently began monitoring short-term registrations. The first statistical report, covering the last four months of 1988, showed Jeep with the highest percentage of short-term registrations among all makes. Nearly three-quarters of the 1,466 Jeeps registered in Germany from September through December were de-registered within 31 days. Chrysler sold 3,376 Jeeps in West Germany during 1988.

Short-term registrations are widely depicted here as a means by which carmakers can manipulate official sales numbers. They also are considered a way to permit new cars to be sold as used, thus sidestepping German laws against discounting.

The issue is a sensitive one for Chrysler because the company's year-old return to the European market after a decade's absence is being watched closely. Sales started last year in Germany, the Netherlands, Belgium, Switzerland and Austria. Chrysler will return to France later this spring.

Klaus Hadulla, director of European operations for Chrysler International, insisted said combined Jeep and Chrysler registrations last year in Germany totaled 5,150 and will nearly double this year.

"This year, we will achieve a minimum of 10,000 registrations in Germany," he said. "We're running an average of 1,000 over the last three months."

The Kraftfahrt-Bundesamt reported that during the September-December period, 271 Jeeps were de-registered within one day, 367 within three days, 423 in four to seven days and 28 in eight to 31 days. The total of 1,089 short-term registrations amounted to 74.28 percent of total Jeep registrations for the period.

Hadulla said the company had tracked only about 400 de-registrations. He said internal inquiries indicate that the units in question were de-registered by dealers only for the purpose of gray-market exports and that a large proportion were diesels. Diesel sales have fallen sharply in West Germany during the past year.

Hadulla denied that units have been de-registered for purposes of discounting or padding sales fig-

Mazda to use Ford engines in Flat Rock cars

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

Mazda's thoughts of building its own U.S. engine plant have been put to rest with its agreement to use Ford engines in most cars produced at the Japanese maker's Michigan assembly plant.

Mazda Motor Manufacturing (USA) Corp. announced last week that by the mid-1990s it would rely on Ford Motor Co. to supply the "majority" of engines for the Ford and Mazda models built at Mazda's plant in Flat Rock, Mich.

The company revealed few details about its plans. Last year, however, Mazda said it was exploring the possibility of adding an engine plant. So the announcement marks the conclusion of that study. Other Japanese makers — Honda, Nissan and Toyota — have built or are constructing engine plants to serve their U.S. assembly operations.

Another alternative was to continue to source engines for its cars from the parent company in Japan.

The Flat Rock plant, which opened in 1987, builds the Mazda MX-6 and the Ford Probe. Both are powered by a 2.2-liter four-cylinder engine imported from Mazda Motor Corp.

The decision was driven in part by economics said a Mazda spokesman.

"Ford had indicated that they wish to put their engines in their badged product, which means that a significant portion of the production in Flat Rock would have Ford engines," the spokesman said.

Since Ford is guaranteed at least 50 percent of the plant's production, the number of Mazda-sourced engines would have been cut substantially from current levels. As a result, the per-unit cost of the imported engines would rise as economies of scales were reduced, the spokesman explained.

Mazda said it was too early to say how many Ford engines would go into its cars. But the company could continue to import its own engines for certain cars, such as high-performance models.

The move also will help increase the local content of the plant's combined Ford and Mazda output. That local content figure, which reflects the value of parts and components sourced from the United States and Canada, is expected to reach 65 percent by the end of this year and 75 percent by the 1992 model year, the spokesman said.

The phase-in of Ford engines begins next year when a Ford V-6 will be used in some Ford Probes.

Currently about 65 percent of the plant's production is devoted to the Probe and the balance to the Mazda MX-6. When Mazda adds its 626 model to the line this fall, its share of the output is expected to increase to the 40-50 percent range. The plant can produce up to 300,000 units per year with overtime.

Ford would likely need to increase its own engine capacity to be able to supply most of Flat Rock's production. A V-6 version of Ford's new modular engine is expected to go into production in 1992 at an engine plant near Cleveland.

The Ford-Mazda engine deal will mark another link in the partnership between the two companies. Ford owns 25 percent of Mazda Motor Corp. The two have signatures on such cars as the Mercury Tracer and Ford Festiva.

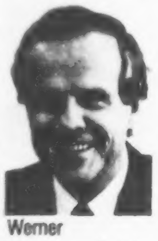
Daimler world truck out; global parts in

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

STUTTGART, West Germany — Daimler-Benz, the world's largest maker of heavy trucks, has given up on the concept of a world truck and is now pursuing a global component sourcing strategy.

Its new strategy of developing bases for common parts around the world rather than built-up common trucks is designed to take advantage of its plant spread in 43 countries. One of those includes Freightliner in the United States.

The cradle of the new effort is in Brazil and the concept should spread around the globe in a modified form, according to Helmut Werner, head of Daimler's commercial-vehicle operations.



Werner

"In the past, everyone thought there should be a world car or a world truck," said Werner. "But it is now clear that the customer would not accept the long waiting times. There is also the cost of logistics. Furthermore, we do not have a truck that suits all needs. Therefore, we have changed our philosophy completely from a CBU (completely built-up) world concept to a component world concept."

The so-called world component truck is envisioned as a price-competitive vehicle using common parts produced around the world. Production could then be shifted around based on cost and currency exchange conditions.

"We are banking on things that can be made available from our own group," said Werner. "But we also are trying to include possibilities offered by component manufacturers already active in the respective countries."

Werner took over as head of Daimler's commercial-vehicle operation in late 1987. He was recruited from the West German tire maker Continental and is widely reckoned as the likely successor to current Daimler-Benz AG Chairman Edzard Reuter.

Since coming to Daimler-Benz, he has implemented rigid cost control to improve the division's sluggish profitability and has pushed the global component concept.

"We are developing a kind of cluster principle around our own assembly or manufacturing facility," said Werner. "We are analyzing in each country what can be made available locally, what kind of support can be given directly to build up additional supply capacities and what can be done to encourage suppliers who may be working for us here in Germany, Brazil or in the United States to do the same for us."

The concept is already being tested. For example, a Mercedes bus currently produced in Nigeria uses components from Argentina, Brazil and Germany.

"I believe the strength of our company is in our talent to harmonize the different components. We have learned that since our acquisition of Freightliner," said Werner. "Our technicians have said whether or not it is a Mercedes component is not so important. What is important is whether the end product, the vehicle, offers Mercedes quality."

Daimler's fledgling relationship with Mitsubishi could play a role in the strategy. Though plans to co-develop a light-duty van for production in Spain have been canceled, Werner said the partners will cooperate on components.

Werner said the basis for a true world-component-type vehicle is taking shape in Brazil with the medium-duty truck Mercedes produces there.

"The mainframe for that truck has been developed in Brazil, and we are starting to sell it in Brazil," he said. "That is the mother formula, and we are exporting it.

In a modified version, the concept being developed in Brazil can be used around the world in different configurations, he added.

Werner said the booming world truck market is beginning a period of stabilization.

He predicted that Daimler's world truck production — which ranges from 2.5-ton light vans to 40-ton heavy trucks — will rise from 258,000 in 1988 to about 265,000 in 1989.

Werner said Mercedes truck profitability is growing at a much faster rate than revenue, which increased 18 percent last year to 23 billion marks ($12.2 billion).

He said earnings improved "tremendously" last year and that the 1988 numbers were well within the 2.5 to 3 percent profit margins generally accepted for other European truckmakers.

Daimler is capacity constrained in Europe. The heavy-truck plant in Woerth, West Germany, produced 20 percent over plan in 1988.

"We will have another increase this year without going into an investment," said Werner.

Most major European manufacturers are constrained, but there is an industrywide nervousness about adding new production capacity.

"I would find it extremely dangerous to expand capacity today," he said. "If somebody started, most of the others would follow because everybody is short. If you expanded today, the first products would come out in two or three years. Then the market might have changed. If Mercedes raised capacity, in my opinion, everybody would have to react. I'm very much for optimizing utilization of existing capacity. We are not going to have more demand for units by the end of the century."

Werner said Daimler has no interest in buying capacity in Europe, though other European truckmakers have done so. Two manufacturers thought to be available are Spain's Pegaso and Austria's Steyr-Daimler-Puch. Mercedes is occasionally rumored to be interested in both.

"Strategically, we prefer not to buy capacity," said Werner. "If you buy something, you have to buy a market. That would apply to Steyr and Pegaso."

In the United States, Werner said, Freightliner's profitability "has given us the justification to go into some big investment programs."

Daimler recently bought the MAN Truck and Bus. Corp. plant

AROUND THE WORLD

Car sales in Europe flatten out, but gain continues

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — A long-awaited downturn has yet to hit Europe's new-car market, though March sales were up less than 1 percent over last year's.

Europe's car market has confounded the experts before. A 5 percent drop last October was widely viewed as the start of a decline that is now considered to be more than a year overdue. But sales rose in each of the next four months.

Despite expectations of a 3 to 5 percent slide in 1989 from last year's record 13-million-car market, overall sales were buoyant in January and February, causing some analysts to revise forecasts.

Sales in 17 Western European countries rose 6.1 percent in the first quarter of 1989, but the market was up less than one percent in March, according to industry estimates compiled by Automotive News.

Fiat was tops among carmakers in the quarter. The Italian group effectively shared first place last year with Volkswagen AG, but analysts think Fiat may emerge as a clear winner this year.

European sales rose 0.6 percent to 1,334,200 units in March. Volume for the year-to-date totaled 3,607,700, up 6.1 percent over the same period last year.

Fiat Auto, including the Fiat, Alfa Romeo and Lancia brands, improved 1.2 percent to 201,700 units in March and ranked first in the first quarter with sales of 567,900 cars, an increase of 4.3 percent and a 15.7 percent market share. The Fiat brand was up 5 percent to 427,200 for the quarter.

Fiat's sales pattern in recent years has been a strong first half followed by a slowdown in the last six months. Meanwhile, VW, the European sales leader since 1985, traditionally gathers momentum in the second half.

Some analysts say the expected second-half downturn this year could blunt VW's normal resurgence and enable Fiat to claim first place for 1989.

Fiat supplier sources say the company's current new-car order book is 100,000 units above what was originally targeted.

"They are certainly way above budget for the beginning of the year," said analyst Enrico Ponzone, an Italian specialist at Kleinwort-Benson in London. "If (industry-wide) sales flatten, they should be in a position to take first place, given that VW would suffer from a second-half downturn."

Volkswagen AG ranked second after three months with sales of 501,700, a 13.9 percent market share and a 5.8 percent improvement over last year. The group, which includes the VW, Audi and Seat brands, was off 0.1 percent to 191,000 in March.

France's Peugeot S.A. finished the first quarter just a shade behind VW with sales of 497,300 units, a 14.7 percent increase.

Peugeot S.A., including the Peugeot and Citroen divisions, captured 13.8 percent of the market after taking just under 12 percent in all of 1988.

Its climb was slowed in March by a flat market in France, where Peugeot S.A. now controls more than 35 percent of sales. The group's sales in all of Europe rose 5.9 percent during the month to 181,500 units following a 19 percent rise in January and February.

Its surge has been led by the Automobiles Peugeot Division, which hiked sales nearly 17 percent in the first quarter to 310,400.

Fourth-place Ford toted up sales of 409,400 in the first quarter, an 11.3 percent share and a 7 percent gain over the previous year. Ford's March sales in Europe rose 4.9 percent to 147,900. March sales declined 6.8 percent to 27,300 in Germany, but leaped 27.7 percent to 63,500 in the United Kingdom, Ford's best European market.

EUROPEAN SALES

Manufacturer	March 1989	1989 share*	March 1988	Change 89 vs 88
Fiat Group**	567,900	15.7	544,400	+ 4.3

Mitsubishi	39,800	1.1	36,700	+ 8.6
Honda	31,100	0.9	34,900	− 0.9
Others	136,600	3.8	133,300	+ 2.5
Total	3,607,700	100.0	3,400,800	+ 6.1

* Total does not add up to 100 percent because of rounding
** Includes Alfa Romeo
*** Peugeot, Citroen, Talbot
**** Opel, Vauxhall, Isuzu, GM-U.S./Canada

General Motors was next with an 11.1 percent share on sales of 400,100, a 10.5 percent increase over 1988. During March, GM's 6.1 percent climb to 151,500 was the best performance of all major makers in Europe. Much of the gain was due to strong sales for the new Opel Vectra subcompact in Germany. Opel's March sales rose 6.4 percent in Germany, while the rest of the German market was down.

Renault held 10.4 percent of the European market through the first three months on sales of 374,900 cars, a 5.6 percent improvement over 1988. However, Renault declined 0.7 percent in March to 141,100 as the French market slipped.

Among Europe's specialist brands, BMW continued to show the fastest rate of growth. Three-month sales perked up 22.3 percent to 102,400, good for 2.8 percent of the total market. But BMW's March sales in Europe rose just 4.1 percent — pulled down by a 5 percent drop to 19,700 in Germany.

Rival Mercedes-Benz was off 7.3 percent for the quarter to 116,000 units, a 3.2 percent share. Mercedes dropped 11.4 percent in March to 41,500 units as it suffered a 21 percent decline to 24,800 in Germany.

Combined sales by Japanese makers were off 2.4 percent to 145,900 in March. The three-month Japanese total was 365,200 cars, a gain of 1.3 percent over last year and a 10.1 percent share.

Nissan continued to lead the Japanese makes, with a 7.3 percent improvement to 100,400 for the quarter and a 2.8 percent share.

Among national markets, West Germany ranked No. 1 in the first quarter with sales of 697,600 cars, a 6.2 percent gain over last year. But German sales slid 3.4 percent to 296,400 in March. The drop was in line with predictions that Europe's largest market will fall back from last year's 2.8 million sales.

Italian sales remained healthy, increasing 7.5 percent in March to 238,100. For the quarter, Italy was up 5.4 percent from 1988's record pace to 675,000.

The United Kingdom was next at 631,200 cars in the first quarter, a rise of 7.9 percent. In March, Great Britain's sales climbed 5.7 percent to 221,200.

France declined 1.1 percent in March to 215,000 units, but for the first quarter was nearly 10 percent ahead of 1988 with sales of 591,500.

GLOBAL BRIEFS

Renault 21 introduced as Argentine top-liner

BUENOS AIRES, Argentina — Renault Argentina introduced the Renault 21 (formerly sold as the Eagle Medallion in the United States) April 6. The company said the debut represents a $33 million investment.

The 2.2-liter car is built locally with 60 percent Argentine content from 108 local suppliers. Renault said local content will increase to 85 percent within two years.

The R21 is aimed at the top of Argentina's 130,000-unit-a-year market. Renault, which has a market share of 33 percent, expects to produce 400 R21 units a month for the rest of 1989.

Renault is also Argentina's leading auto component exporter. Last year, it accounted for 37 percent, $50 million worth, of auto parts exports. The company expects to increase exports 20 percent this year.

— **Cristina Bonasegna**

Ford radio firm in Brazil told to bring back profits

SAO PAULO, Brazil — A Brazilian federal court ordered Ford Industria e Comercio, a manufacturer of car radios in Sao Paulo, to bring back $33 million in profits sent to Ford Motor Co. in the United States during 1984.

The decision grew out of a dispute between Ford and Brazil's Central Bank, which charged an additional tax on the profits to cover exchange rate variations.

Ford went to court, arguing that taxes should not take exchange rates into account. But the court decided in the bank's favor and ordered Ford to repatriate the funds and pay the tax. Ford said it will appeal the decision.

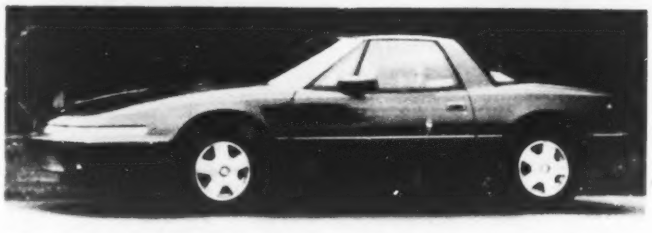
Mertz says Reatta is doing the job as Buick's 'halo' car

By Jim Henry and Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTERS



Mertz says Reatta is for people who want a Corvette but don't really want one

Buick General Manager Ed Mertz said his division's Reatta two-seater is an effective "halo" car that reflects well on the rest of the line, although sales are barely on target.

To pump new life into the car, the division said it is stepping up advertising to introductory levels.

"What we did (with the Reatta) was go after a market that didn't exist," Mertz said in New York.

"It's got room; it doesn't ride like a rock, as some sports cars do; you don't sit on the ground. It's a luxury car for people who really want a Corvette, but they don't really want a Corvette. Starting a new market is always tough," he said.

Mertz acknowledged that Reatta production was slowed in part because sales have not met expectations, but he said sales are growing and are considered satisfactory.

Jay Qualman, Buick's director of advertising, said Reatta advertising will soon be boosted to its highest level since last year's launch, when the Reatta ad budget was reported to have been about $10 million.

With the heavy introductory ad campaign, Reatta sales took off, surpassing the supply. Buick backed off its Reatta advertising and shifted the advertising dollars to other Buick models, particularly the Regal, Qualman said.

Inventory is growing and sales are at the low end of Buick's target of 7,000 to 8,000 Reattas for the 1989 model year. In mid-April, Buick said it had sold 3,500 units and that March's total of 689 was a record. In the 1988 model year, Buick sold 2,759 Reattas against an estimate of 3,000.

Qualman said "now, we're shifting back," to introductory levels of advertising in an effort to boost sales. Included is a new series of 15-second and 30-second television ads, radio spots and a new magazine and newspaper campaign.

Besides the slackened demand, Mertz said Reatta production was interrupted in January to retool for the Reatta convertible, which is due for production in September.

He acknowledged that Reatta's styling is less aggressive than that of some competitors. He said the car may not accelerate as fast as some, but Reatta was intended to be more things for more people.

"The car is very well balanced. It might not be leading-edge, but it's easier to do a (one-dimensional) car that's very great in acceleration, or very great in handling. It's much more difficult to do everything well. I think that's a much higher level of sophistication," Mertz said.

He said the average income for Reatta buyers is $100,000 a year, well above average for the rest of the Buick line. He said Reatta has sold well as a conquest car, and it has served its purpose as a "halo" car, drawing attention to Buick.

One-third of Reatta buyers add the car without trading in a car, Mertz said. One-third trade in a General Motors make, including Buick; and another one-third are conquests from high-line luxury cars, both European and domestic. He said the most numerous conquests are BMW and Porsche.

One of the new Reatta television ads explains the concept of the car and its position as a unique, luxury two-seater. The commercial features a BMW 325is, a Reatta and a Mercedes-Benz 560SL. The ad claims that for approximately $26,000, Reatta offers fresh styling and value compared with its competitors. The tagline is, "The others pale by comparison."

Another spot shows a Reatta in a row of Mercedes, BMW and Saab models. The camera spans the cars, then returns to the Reatta, with the line: "In a sea of ordinary cars, Reatta deserves a second glance."

Qualman said Buick wants to establish Reatta's name before the convertible is introduced.

Delayed for a year for further engineering work, the convertible is expected to account for up to a third of all Reatta sales.

Mertz dismissed the notion of Buick adding a minivan or all-purpose vehicle to its lineup, as Oldsmobile will do in the fall. The Oldsmobile action angered some Chevrolet and Pontiac dealers.

"We looked at it, of course, and we found that for every truck owner who buys a Buick, there was a virtually equal number of Buick owners who bought a truck. That just isn't our focus. That's not where we ought to be putting a lot of capital and effort," he said.

RESALE

FROM PAGE 1

tively, while the average values of the two luxury import cars declined 10.00 percent and 15.65 percent in the first year.

Real-world dealer resale prices seem to confirm the heat of the marketplace.

"Here in the Southwest, the sport-utility, four-by-four and pickup markets are so strong, and never seem to weaken, that we've been asking ourselves when the bottom is going to fall out. It just doesn't seem like it's going to happen," said Steve Trompeter, used-vehicle sales manager at Lou Grubb Chevrolet in Phoenix, Ariz. Trompeter said he retails 185 to 250 used vehicles per month.

He said that while the equipment level doesn't seem to matter to buyers of the used units, more equipment means a greater profit. But, "There just isn't an area that's slow for us," he added.

The study showed that the better performers in this arena are domestic models. Only a few of the imported sport-utility vehicles had higher values than their domestic counterparts after 12 months.

For example, Toyota's 4Runner SR5 declined 17.41 percent and the Isuzu Trooper II LS lost 17.82 percent of its initial retail value after the first year.

Still, sales and resale prices remain strong for both Toyota's 4-Runner and its Land Cruiser, and one dealer said he believes currency exchange is as big a factor as the quality of the product.

"We are the fourth largest Toyota dealer in the country and we sell about four Land Cruisers a month — I could sell 14 or 40 if I could get them," said David Wilson, president of Toyota of Orange in Orange, Calif.

Wilson said the resale value on nine-year-old Land Cruisers is so strong that he's able to get up to $1,000 more for them today than what they sold for new in 1980.

"Southern California is so dominated by imports," he said. "And I think that's one reason there is such strength in the used-car market. With the yen/dollar relationship, and the way it has reacted in the past several years, used-car prices have been pulled up by the new-car price spiral."

According to the CCC study, poor price performers in the used sport-utility vehicle sample were smaller off-road vehicles. The Jeep Wrangler Laredo declined 21.95 percent and the Suzuki Samurai JX lost 30.77 percent or nearly a third of its initial retail value in the first year.

But Jeep's larger Cherokee Limited depreciated only 15.68 percent in the first year.

"We've found used Cherokees are real hot. They've taken the original retail knock and they're no longer $18,000 but are getting, on a rough average, $15,000," said Wayne Brander, sales manager of Reno Jeep-Eagle in Reno, Nev.

Leading the resale charge are 1987 and 1988 two- and four-door models with the 4-liter V-6, he said.

In the minivan class, the Plymouth Voyager LE was not far behind top sport-utility models in the CCC survey. A one-year-old Voyager held 88.1 percent of its original retail value. The 1988 Voyager LE listed for about $18,500 new and on March 1, 1989, it was selling for $16,300.

The reason for the sales strength is supply and demand, according to dealers and auto analyst Christopher Cedergren of J.D. Power and Associates in Agoura Hills, Calif.

"There isn't a strong well of used vehicles," to draw on, Cedergren said. "It's the case that the obviously limited supply commands high retail prices."

Cedergren also said the domestic minivans hold their value better than the Japanese models because of their designs.

"You're going to find a Dodge-Plymouth minivan will hold its value better than the Japanese models simply because the domestics have done the best job of executing the compact van concept," he said. "The Japanese have failed in that regard; they are considered to be crude. And it is one of the segments in which the Japanese lag behind the domestics."

Partly fueling the high sport-utility numbers may be the buyers themselves, Cedergren said. While buyer profiles of both minivans and sport-utility vehicles are similar in age, there are differences in the image they want to convey.

"People who are generally buying sport-utility vehicles certainly are not truck buyers," Cedergren said. "They are younger to middle-aged baby boomers who want a high image and a very versatile vehicle. They want a common-sense 3-series BMW. So it's not uncommon that when you look at a young attorney's shopping list, it will have a BMW and a Jeep Cherokee Limited.

"Vans are not image vehicles, not yet. They are common-sense vehicles generally bought by younger, maturing baby boomers with families," he said.

"The bottom line is that demand is still very strong for both vehicle types," Cedergren said. "What will have an impact will be a greater supply of those vehicles. The Japanese have a strong, aggressive plan to add more models to those segments. That, combined with a growing number of used vehicles in this market, that will reduce resale prices to more typical levels."

Demand for short-supply used minivans has kept retail values high in spite of extended travel mileage, according to CCC's Geen. Most of the used minivans in CCC's sample held their values better than the sport-utility vehicles sampled.

Other than the Mitsubishi LS van, which sold for 19.40 percent less after a year, the vans in the sample varied less than 3 percentage points in resale value, depreciating only 12 to 15 percent.

"This type of vehicle has truly taken charge in an otherwise flat market," Geen said, adding that the number values may vary a little because prices are based on suggested retail rather than dealer invoice.

Unlike car models tracked in previous CCC used-car studies, these used vehicles showed little regional price variation.

The CCC sample included 4x4s, wagons, off-road vehicles and minivans with "upgraded equipment and trim levels." The CCC data base reflects numbers gathered for auto insurance company "loss or theft valuations."

The new 1988 sport-utility vehicles were priced from $10,400 to $25,300, and selected minivan list prices ranged from $17,500 to $19,000.

After 12 months, those vehicles sold for about $7,200 to $19,900. Their original values dropped 10.22 percent to 30.77 percent.

France skips Japan quota for U.K. Nissans

By Jean-Jacques Renaux
STAFF CORRESPONDENT

BRUSSELS, Belgium — France has agreed to let British-built Nissan Bluebirds to be sold in the country without coming under the government's quotas on Japanese cars. The agreement ends a dispute with the United Kingdom over the car's European content.

But Italy reaffirmed its position that it will still count the British Nissans against its annual quota of 2,600 Japanese cars.

Until last week's shift in position, France maintained the U.K.-produced cars should be included with its quota limiting Japanese imports to 3 percent of the total market, which was 66,000 units in 1988. The French government maintained that the cars should have a local content level of 80 percent to be considered European-produced vehicles.

Britain countered that the vehicles, which are currently 70 percent local content, are expected to reach 80 percent in a few years.

Nissan, which has already shipped 3,000 cars this year to France from England, welcomed the move, as did other Japanese carmakers seeking to establish European transplants prior to the EC's 1992 market unification.

But, France's agreement was specific to the Nissan question and does not apply to other Japanese manufacturers. Toyota, which announced plans for a 200,000-unit United Kingdom plant last week, is not mentioned in the agreement.

As part of that pact, France got the promise from Nissan and Britain that they would seek to reach a 80 percent local content soon.

Jacques Calvet, head of the PSA French car group, interpreted the agreement as meaning the European Commission officially recognizes France's right to maintain a 3 percent quota on Japanese car imports. But that commission is also calling for an end to such unilateral quotas and local content rules.

France and Italy insist Europe should not open itself to Japanese imports or transplants without several guarantees such as reciprocity.

QUOTA

FROM PAGE 1

The total for 1988 was approximately 40,000 units less than the previous year, when shipments of 2.21 million also fell below the 2.3 million limit.

Most companies shipped close to quota, but Nissan fell short by 114,538 units. That was primarily due to the need to cut back exports in the first half of the year in order to reduce large inventories in the United States, the company said.

The high inventories were caused by stagnant sales during a period when Nissan had no new models to offer. But exports increased when Nissan introduced the new Maxima and 240SX in the second half of the quota period. Shipments for the first half of the period were 155,899 compared to 270,063 for the second half. Shipments in March, the last month of the period, were 74,042 units.

Earlier this year, Japan's Ministry of International Trade and Industry decided to extend voluntary export restraints for another year beginning April 1, but so far has made no decision on allotments for individual companies.

Company representatives indicate they don't expect a decision from MITI until this summer. Automakers say they have been shipping below quotas, sometimes regardless of demand, in response to MITI's announcement that it will not lift the restraints until it determines that exports to the United States are declining.

So far, MITI has given no indication it will change the individual allotments this year, although Daihatsu Motor Co. has asked for an increase. Last year, Daihatsu's quota was increased to 17,000 units from 11,498 a year earlier.

But Daihatsu officials do not consider an increase likely, partly because it would depend on other companies not meeting quotas and agreeing to surrender some of their allotments. Also, Daihatsu shipped only 14,217 cars to the United States last year, well below its quota.

U.S.-made Sentra models being studied for Europe

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

NASHVILLE, Tenn. — Nissan Motor Manufacturing Corp. U.S.A. is considering export of Sentra subcompacts to Canada, Puerto Rico and possibly Europe.

Rick Sommer, manufacturing vice president, said the company has begun a feasibility study to determine whether it should ship an unspecified number of U.S.-assembled vehicles through Eastern ports.

Sommer said the plan would involve "on the order of several hundred vehicles a month" and would begin with the 1991 model year.

But he added that Sentra sales are strong and if that continues, exporting would be unlikely. In the first quarter, Nissan sold 27,089 Sentras, up from 17,621 a year ago.

Sommer said the export plan would not include the new vehicle that Nissan plans to produce here starting in 1992, an unnamed mid-sized replacement for the Stanza. The company announced last month that it will spend $490 million to expand the Smyrna plant to build up to 220,000 of the Stanza replacements annually.

"That vehicle will be for domestic consumption only," Sommer said. "We're looking only at the Sentra for now."

He said Canada and Puerto Rico are the first priorities, but added, "Europe would have to be the next step." He said a decision will be reached later this year.

The export strategy currently under study may enable Nissan to boost sales in Europe by overcoming quotas and proposed local requirements for Japanese cars.

Should Nissan decide to export the Tennessee Sentra to Europe, the car might avoid the European debate over Japanese content in imported cars. Nissan is already targeting 75 percent North American content for that vehicle by 1991. Europe currently has no trade restrictions against North American vehicle content.

The company said the U.S.-produced Sentra is 66.7 percent locally sourced, but plans to add U.S.-built engines and plastic bumper parts will boost local content to 75 percent.

The company has scheduled additional production this summer to increase Sentra availability, Sommer said.

Exports from the Tennessee operation to date consist of a 1988 shipment of less than 100 King Cab trucks to Japan. The plant produces about 100,000 pickups and about 120,000 Sentras annually.

Nissan currently sells vehicles in Puerto Rico that are produced in Japan. Sommer said sourcing those sales in the United States would allow the company to redirect Japanese capacity.

Car output reaches '89 high point

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

Domestic automakers last week scheduled their highest output of the year. Targeted production of 161,087 units was the highest since the week ended Dec. 24 when 161,138 cars were assembled.

Estimated output last week was 0.36 percent above previous week's 160,513 but was 2.68 percent below the year-ago week's 165,519.
week's 165,519.

So far this year, 2,379,900 cars have been built, 9.51 percent more than the 2,173,211 completed last year at this point.

Last week's scheduled output was shared as follows: General Motors, 48.08 percent; Ford Motor Co., 24.52; Chrysler Motors, 13.66 percent; Honda of America Manufacturing, 4.81 percent; Mazda Motor Manufacturing (USA) Corp., 3.13 percent; New United Motor Manufacturing Inc., 2.48 percent; Nissan Motor Manufacturing Corp. U.S.A., 1.28 percent; Toyota Motor Manufacturing U.S.A., 1.25 percent; and Diamond-Star Motors, 0.79 percent.

Truckmakers scheduled 95,892 units last week, 7.50 percent more than the prior week's 89,203 and 8.44 percent more than the year-ago week's 88,425.

Year-to-date, 1,438,949 trucks have been built, 7.27 percent more than the 1,341,445 assembled last year at this time.

Three GM facilities resumed output last week after being idle to cut inventories. They were Doraville, Ga.; Reatta Craft Centre in Lansing, Mich.; and the Allante line at the Detroit-Hamtramck plant.

Chrysler's Jeep Grand Wagoneer line in Toledo, Ohio, resumed operations today after being shut down because of high inventory.

Overtime was slated last Friday at GM's Janesville, Wis., plant.

GM's Lakewood, Ga.; Lordstown, Ohio; and Flint, Mich., plants were scheduled for overtime last Saturday.

Ford slated overtime last Saturday at its Wayne, Mich.; Norfolk, Va.; and St. Louis plants.

Canadian cars dip; trucks rise

Canadian automakers scheduled production of 21,274 cars last week. That was 4.95 percent below the prior week's 22,381 and 20.22 percent below the year-ago week's 26,665.

So far this year, 318,014 cars have been completed, 12.96 percent fewer than the 365,360 built last year at this point.

Truck production was targeted at 21,137 units last week, 13.46 percent more than the 18,629 and 4.65 percent more than the year-ago week's 20,197.

Year-to-date, 320,752 trucks have been assembled, 4.80 percent more than the 306,053 produced last year at this time.

Chrysler Motors' Bramalea, Ontario, plant was closed last week to cut inventory. The company said the plant is tentatively scheduled to resume operations May 1.

Debate over CAFE heats up

Talk of 40-50 mpg frightens industry

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Concern over global warming may translate into higher fuel economy standards, but how much higher they must go will fuel a debate as hot as last summer's weather.

That hot summer and a drought in some areas of the country focused attention on the "greenhouse effect" — a combination of gases, mostly carbon dioxide, that may trap heat and threaten the earth's environment through higher temperatures.

While Congress considers five proposals and an EPA position paper calling for average mileage of 40 to 50 mpg by the year 2000 and 75 mpg by 2025, domestic automakers are looking at alternative product plans to help them meet the tougher standards.

The Big 3 stand to lose heavily to Japanese automakers if the standards rise abruptly. Many Japanese manufacturers have a greater variety of small-displacement engines with efficiency- and conservation-enhancing features such as four valves per cylinder.

Legislators such as Sen. Timothy Wirth, D-Colo., and Rep. Claudine Schneider, R-R.I., claim that a 40 mpg-plus standard would reduce the global warming by reducing CO2 produced by automobiles.

The Department of Energy estimates that U.S. cars and trucks contribute about 3 percent to total CO2 emissions linked to global warming. Passenger vehicles account for about 2 percent.

The call for much greater fuel efficiency comes at a time when consumers are demanding higher performance and gasoline-consuming options, and features that improve safety but add fuel-consuming weight.

In official statements, the Big 3 say a higher corporate average fuel economy standard would require much smaller cars that wouldn't sell and put them at a competitive disadvantage to the Japanese.

And those rivals don't seem worried.

Thomas D. Mignanelli, executive vice president of operations for Nissan Motor Corp. in U.S.A., said, "In Tokyo, they're (Nissan officials) saying: 'Tell us what the (CAFE) standard is, and we'll meet it.' I think there will be a clear intent on our part to meet the standards."

Mignanelli, a former Lincoln-Mercury executive, pointed out that "every time we put out a new

Progressive halts dealer payments

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

Progressive Acceptance Corp., one of the nation's largest companies financing high-risk car loans, has told dealers it cannot make payments on paper it has committed to buy.

In a letter dated April 21, Progressive told dealers that an investor stopped buying Progressive's commercial paper, and the company is at the limit of its line of credit. Progressive said dealers may ask for the contracts back so they can seek other funding, or dealers may leave the contracts with Progressive, which will fund them "as soon as we obtain new investors."

Progressive's problems come on the heels of those experienced by other financers of subpar credit and at the same time that several new companies, particularly on the West Coast, are entering the market.

Progressive buys retail and lease paper from dealers, packages the loans and sells them to investors in pools of $1,000,000 or more.

Progressive, based in Tulsa, Okla., declined to answer questions, but said in a statement it has stopped originating loans "until it it can find stronger long-term commitments."

It is not known how many dealers remain unpaid.

Progressive buys paper from more than 2,000 franchised dealers and independent leasing companies.

The problem for dealers is that after Progressive approves a contract sent by a dealer, the customer signs it and drives away with the car. The dealer sends the contract to Progressive for the money and is without the car and without the money until Progessive's payment comes through.

Two independent lessors who contacted Automotive News said their contracts for which payment was over four weeks late totaled $68,000.

Progressive's troubles are not unusual in the world of high-risk auto finance.

Some dealers were saddled with the cost of sold vehicles when IDFC, based in Carlsbad, Calif., failed to pay for approved contracts (Automotive News, June 6, 1988 and July 4, 1988).

IDFC subsequently charged in a suit that Reseda Finance breached its contract to buy the retail paper that IDFC acquired.

Progressive packages the loans it buys from dealers and sells them to investors such as banks, savings

see PROGRESSIVE, page 66

Big 3 trim schedules for 2nd quarter output

AUTOMOTIVE NEWS ROUNDUP

Detroit's Big 3 automakers last week modestly sliced their production schedules for the second quarter from their original estimates, so that the industry now expects to build 3.19 percent fewer cars than it did in the second quarter of 1988.

But several independent analysts said they expect further cuts in the schedule before the quarter closes. Many of the Wall Street analysts have downgraded their auto market expectations for 1989 and 1990.

"The industry's plans still look rich in the second and third quarters," said Bernard Campbell, director of automotive services for Data Resources, Lexington, Mass. "It looks as though between now and the end of August, they will have to cut at least 50,000 . . . and perhaps as much as 100,000 units from their plans."

Although sales and production appear to be in balance in the second quarter — both down about 3 percent — the imbalance created by the first quarter still plagues U.S. makers, he said. In the first quarter, production was up about 10 percent from 1988, while sales were down about 10 percent, he said.

DRI is forecasting lengthy downtime during model chan-

BURGER: *Outspoken, respected Chevrolet chief retires; marking 'end of era' at GM*

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Robert Burger remembers the second dealer call he ever made, as an assistant zone manager in Oldsmobile's Detroit office. It was a Michigan outlet owned by two former General Motors employees. One partner was great to work with; the other, ornery.

"The file on him was that he was impossible to get along with," Burger recalled. Burger's predecessors avoided calling on the dealership when he was in.

But Burger wasn't so lucky on his initial visit. After listening to the man's litany of complaints for just so long, Burger snapped back: "Why are you so miserable?" The partner told him, the air was cleared, and Burger looked forward to later visits.

"You always have to level with car dealers," said

2 die in Ford Rouge blast
An explosion in an underground utility tunnel shattered pavement and overturned cars at Ford Motor Co.'s Rouge complex in Dearborn, Mich., last week. Two workers from a maintenance contractor were killed in the tunnel. The deaths were attributed to carbon monoxide poisoning and drowning. The tunnel carries electric, water, steam and compressed air services to several buildings. Some operations, including the Mustang assembly plant, were closed for a day.

Fischer recalled to VWoA post

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

Peter Fischer, the former Audi of America chief who was re-assigned at the peak of the crisis over unintended acceleration, will return to Volkswagen of America in two weeks.

Fischer will rejoin the company from Volkswagen AG, where he has been in charge of worldwide training and advertising for the company's central marketing group. The move is one of several appointments effective today.

The native of Germany will be one of nine executives reporting directly to Hans Hungerland, the new president of VWoA. Fischer will oversee the company's market planning, product planning and distribution and logistics operations. Some of those duties had previously been held by Vice President Richard L. Mugg, who left VWoA's central staff 15 months ago to head Audi.

In another move, Vice President Philip A. Hutchinson Jr. assumes control of the legal department and central public relations in addition to his current responsibilities for industry and government relations. He will continue to be based in Washington. The company's general counsel, N. Richard Skipper Jr., will resign, effective June 1, and work in private practice.

Fischer left VWoA in November 1986, shortly before a CBS "60 Minutes" segment portrayed the Audi 5000 as a car prone to accelerate out of a driver's control. The broadcast capped a year of damaging publicity that has been the chief cause of Audi's troubles in the U.S. market.

Fischer's departure after more than four years on the job set in motion a revolving door through which two other chiefs passed before Mugg restored some stability to the post.

This year, government reports in Canada and the United States concluded unintended acceleration is caused by drivers who mistake the accelerator for the brake pedal. Audi says it has been vindicated by

VW's new test drive: Keep car for days

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

TROY, Mich. — Car buyers with a gleam in their eyes for a new Volkswagen are being invited to put hundreds of miles on one of the company's cars in an extended test drive.

Volkswagen United States dealers are handing over the keys to company-owned VWs for days at a time under a program that expires May 31. While the company knows its styling is dated, it hopes to sell buyers on performance and handling. Hence the long test drive.

As one dealer explained, "VW is the kind of car that you fall in love with if you drive it for a couple of days."

The test fleet is owned by VW. One high-volume dealer said he had three dozen cars. Another mid-sized dealer said he had about 13. Dealers said VW pays for insurance; dealers are responsible for gas and keeping the cars clean.

A company spokesman declined to comment on the program. It is not being advertised. And it is up to the dealers to decide which shoppers can use it. Dealers said it was designed for those who are close to a deal but not committed.

The extended test drive is another element of a recovery program created by William Young, who took over as head of the Volkswagen division Feb. 1.

It coincides with a plan that essentially provides $500 to $2,000 toward a downpayment.

In the first quarter, VW sales were down 36 percent from 1988.

Dealers reported a range of reaction to the newest efforts.

"Our traffic is probably up 300 percent," said Jack Price, a dealer in Albuquerque, N.M.

He credited the test drive for a big boost in his store's closing ratio.

Gary Hunt, a VW general sales manager at Meltebeke Volkswagen, La Habra, Calif., said he likes the programs but it's too early to judge them. So far, the new incentives haven't helped much, he said.

1990 product race: GM ahead of Ford

By David Versical and Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTERS

The new-product coin gets flipped in the 1990 model year, as Ford Motor Co. — which recently has been surpassing General Motors in the number of all-new models introduced annually — will debut only the rebodied Lincoln Town Car, while its competitor across town introduces a new minivan series, sedan versions of its mid-sized GM10 line, four convertibles and a longer Oldsmobile Toronado.

The first official description of the Big 3's lineups for 1990 was revealed in the 1990 vehicle preview specification book published by LMV Leasing, Pittsburgh. It is being distributed to LMV's fleet customers.

The highlights of future products for Ford and GM follow; those for Chrysler appeared in the April 24 issue of Automotive News.

POPULAR MECHANICS/JIM DUNNE

Toronado is reskinned and stretched 12 inches for 1990

Ford Motor Co.

After a succession of busy product launches, Ford will catch its breath in the 1990 model year.

The company will introduce just one new entry during the 1990 campaign, a substantially revised and reskinned Lincoln Town Car.

In the past two years, all-new Cougars, Thunderbirds and Continentals have reached showrooms, while such nameplates as Probe, Tracer, Festiva and Scorpio have been added to Ford's sales charts.

Ford will pick up the pace again in the 1991 model year. Its most significant products will be replacements for the current Escort and Tracer, as well as a new Bronco II sport-utility vehicle. All are scheduled to go into production in early 1990.

Two new import entries are also expected as 1991 models: the Australian-built Mercury Capri and a notchback version of the European Scorpio, with an optional high-performance Cosworth engine. Production of the next-generation Crown Victoria/Grand Marquis, codenamed EN53, will begin in the early 1991 calendar year.

Ford has had its share of developmental tasks this coming year, as standard air bags are being added to the driver's side on eight lines. The safety restraints will appear on Ford Mustang, Taurus and Crown Victoria; Mercury Sable and Grand Marquis; Merkur Scorpio; and Lincoln Town

Automotive News Congress dates set

The 14th annual Automotive News World Congress is set for Jan. 7-10 at the Westin Hotel in Detroit. The World Congress, usually held in mid-summer, now dovetails with the North American International Auto Show, also in Detroit.

Top auto industry officials will speak at the World Congress.

This year the World Congress is co-sponsored by the University of Michigan. In turn, Automotive News will join the university in its automotive management briefing seminar, Aug. 9-11 in Traverse City, Mich.

Keith Crain, publisher of Automotive News, said the move "would make two successful conferences even better."

David E. Cole, director of automotive transportation studies at the university, said, "It will allow us to jointly select themes and speakers for both conferences, providing the best possible programs to our registrants."

World vehicle giants gain in '88

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

The world's top dozen vehicle makers all enjoyed production increases for 1988, with General Motors again leading the pack, building nearly 8.11 million vehicles.

For 1988, the 12 leading motor vehicle producers worldwide combined to build some 36.96 million cars, trucks and buses. That represents a 6.73 percent increase over their 1987 production figures, which totaled some 34.63 million vehicles.

Overall ranking for vehicle producers remained as they had been in 1987, with Ford Motor Co. (6.52 million) and Toyota Motor Corp. (3.85 million) rounding out the top three spots.

But there were some significant changes in rankings compared to five years ago.

In 1984, Volkswagen AG was the world's sixth largest vehicle maker; in 1987 and 1988, after digesting Spanish maker Seat, it ranked No. 4. Fiat Auto S.p.A. climbed from ninth place in 1984 to seventh place, but Renault fell from fifth place to ninth. The others on the most current list of the world's top dozen vehicle makers were already on the list in 1984, although some gained or lost a place in the intervening five years.

Europe's top 1988 vehicle maker remained Volkswagen, with some 2.85 million vehicles built. That number represents a 2.78-percent increase over the previous year.

In a ranking of world producers by nationality, Detroit's Big 3 automakers came out on top with a combined 1988 total of more than 17.19 million vehicles produced at home and overseas.

The five Japanese-headquartered automakers that made the list had combined worldwide production in 1988 of more than 9.74 million.

The four European automakers on the world's top dozen list produced 8.92 million vehicles worldwide in 1988.

The automaker which enjoyed the greatest production growth in 1988 was Nissan Motor Co., with an 18.75 percent increase over 1987. Double-digit percentage increases were also realized by Chrysler Motors, up 13.57 percent, and Honda Motor Co., up 12.73 percent. Increases for the world's other leading vehicle makers were Fiat, 8.72 percent; Ford, 6.58 percent, Peugeot S.A., 6.53 percent; Toyota, 5.78 percent; GM, 4.41 percent; VW, 2.78 percent; Mazda Motor Corp., 2.67 percent; Mitsubishi Motors Corp., 1.32 percent; and Renault, 1.05 percent.

With 1988 world production estimated at 48.27 million, the 12 leaders combined to make up nearly 77 percent of all vehicles built.

Shop sales take tumble in February

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

Service and parts business at new-car dealerships took a roller coaster ride as sales volume tumbled in each of five major categories in February.

February's slide followed a sharp increase in parts and service business in January.

In February, shop volume fell 6.7 percent, compared to February 1988, according to the Automotive News Service Index. In January, shop volume rose 9.8 percent over January 1988.

Shop volume for the first two months of 1989 was up 2.7 percent over 1988 figures.

The number of repair orders written in February 1989 declined more than any other indicator — 9.9 percent, compared to the same period last year. The category registered a 2.0-percent decrease for the first two months of 1989.

Labor sales (including customer-paid and warranty) dropped 6.6 percent in February from the same period a year ago, but increased 3.0 percent for the first two months of 1989.

Shop parts sales (customer-paid and warranty) fell 1.4 percent in February 1989 compared to February 1988. But the category saw an increase of 5.3 percent for the first two months of 1989 compared to early 1988.

Parts and accessories sales to off-premises customers dropped 8.7 percent in February, yet grew 1.5 percent for the first two months of 1989.

SERVICE INDEX
101.9★

	Feb., '89 vs. Feb., '88	Jan.-Feb., '89 vs. Jan.-Feb., '88
Gross Profit on All Labor and P&A Sales	−7.1%	+1.7%
Repair Orders Written	−9.9%	−2.0%
Total Labor Sales (Customer & Warranty)	−6.6%	+3.0%
Shop Parts Sales (Customer & Warranty)	−1.4%	+5.3%
Sales of All P&A...........	−8.7%	+1.5%

★ Survey by Automotive News shows that dealers' service and parts business in February 1989 was 101.9 percent of business in February 1988. Service business in the first 2 months of 1989 was 93.3 percent of business in the corresponding period in 1988.

SERVICE BRIEFS

All aboard

Mitsubishi Motor Sales of America claims to be the first auto company to invite every dealership parts manager to attend a national meeting at one location.

Nearly 150 of the company's 250 dealership parts managers and numerous regional and corporate personnel attended. The seminar provided insight into business management, marketing and Mitsubishi parts policies and programs, a company spokesman said.

Robert F. LaBossiere, parts operations director, said a new Southeastern Parts Distribution Center in Atlanta will be joined by new regional offices in Orlando, Fla., and Dallas.

MEMA elects McCurdy

Larry McCurdy, president and chief executive officer of Moog Automotive, has been elected chairman of the Motor and Equipment Manufacturers Association.

In addition, five new directors have been named: Robert Hirsch, president, Gold Eagle Co.; Dale Johnson, president, SPX Corp.; James Krause, president and general manager, Sherwin-Williams Automotive Aftermarket Division; John R. Moore, president, automotive group, Midas International Corp.; and Michael Plumley, chairman, Plumley Cos.

Jaguar's finest

Jaguar Cars, Leonia, N.J., named 10 dealership service technicians to the Jaguar Master Technicians Guild and five dealership service advisers to the Jaguar Service Advisors Association.

Technicians were judged on their Automotive Service Excellence test scores and on their skills in explaining their recommendations for technical improvements in Jaguar components. The service advisers were chosen on the basis of three written examinations and one administered by telephone.

Winners were honored at a banquet and awarded a week-long visit to England.

The winning technicians were Vincent Fortgang, Westchester Jaguar, White Plains, N.Y.; P. Bruce Mochrie, Jake Kaplans Ltd., Providence, R.I.; Hing H. Easton, Rusnak Pasadena, Pasadena, Calif.; Gary Zuniga, Hornburg Jaguar, Santa Monica, Calif.; Elliott D. Anderson, Lee Imported Cars, Wellesley, Mass.

Also, Ricky Clanton, Chaisson Motor Cars, Las Vegas, Nev.; Michael J. Schafer, Performance Jaguar, Austin, Texas; Richard Kaufman, Jaguar of Darien, Darien, Conn.; Ken Tripkos, Jack Roach Jaguar, Kansas City, Mo.; and Michael Toliver, Manhattan Jaguar, Rockville, Md.

Winning service advisers were Peter Zorzy, Sportique Motors, Huntington, N.Y.; Carolyn Vincent, Tom Payette Jaguar, Louisville, Ky.; Mike S. Allen, Tameron Jaguar, Birmingham, Ala.; Douglas C. Skeen, Performance Jaguar, San Diego; and William L. Swisher, Mark Jaguar, Denver.

Sun, GM a team

Sun Electric Corp., Crystal Lake, Ill., has been appointed by General Motors Service Technology Group as exclusive distributor of the Tech 1 hand-held tester to independent service firms in North America.

Lobbying inspections

The Automotive Service Association, representing independent service and body shops, committed $16,600 to a group lobbying for emission inspection and maintenance programs.

The Coalition for Safer, Cleaner Vehicles claims among its members the Automotive Parts and Accessories Association, Automotive Warehouse Distributors Association and National Automobile Dealers Association.

Megadealer structured to satisfy

Calif. operation stresses service in training, advertising

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

IRVINE, Calif. — It's not by accident that Campbell Automotive Group is rapidly acquiring a reputation for satisfying customers who buy cars and have them serviced at its eight franchises and two body shops in southern California's Orange and Riverside counties.

Campbell

John B.T. Campbell III, president and chief executive officer of Campbell Automotive, proclaims a "deep commitment" to providing Campbell customers with service that is a cut above manufacturers' standards.

The so-called "Campbell Way" of doing business is prominently featured in the company's advertising campaigns.

Customer satisfaction drives every facet of the company's business operations, Campbell said. For example, all salespersons must attend courses not on sales techniques, but on ways to keep customer satisfaction high.

The company develops and continuously updates in-house training courses on sales and service.

Some 1,200 customers are queried every month by a customer relations department. The calls are placed within 48 hours of service.

A day-long service advisers' class "teaches how we want them to deal with customers, how to go through the process and what specific things they have to do to deliver the 'Campbell Difference,' as we call it, to the customer."

A customer-contact class is given to all employees other than salespeople.

"This is a half-day class and, basically, it teaches employees how to deal with people, how to be nice, use the customer's name as soon as they know it," Campbell said. "There are little tricks we teach the employees to impress the customer and to come across that they are caring for the customer's needs, and obviously, how to deal with any customer who has a problem."

The company has yet another quality class that runs two days and is required for all dealership employees.

"This class simply teaches our people how to deliver quality service in whatever job they are in, to whomever their customers are, even if their customers are internal within the dealership," he said.

The class teaches a management system advocated by the Phillip Crosby Quality College in Winter Park, Fla., Campbell said.

Campbell's goal for the service advisers' training is to "have continued refinement so that, essentially, the way that the advisers should treat the customers becomes a system — certain things they do every time, certain things they say every time, etc."

Campbell believes many of the problems encountered by dealerships are related to communications between the customer and service adviser.

"For example, the customer says his car has a thump in the right front of the car, and the service adviser puts down 'bump or noise in the right front,' or whatever.

"So one of our requirements is that the service adviser, after he has written it all down, must read back to the customer what he has written on the service order and ask the customer if that is a correct description of the problem.

"If they do that, it should all but eliminate the situation where we look for the wrong thing in the wrong place."

Satisfying the customers is expensive, Campbell said. For example, some of the extras offered by Campbell Automotive include a toll-free hotline to assist customers Monday through Friday; service and parts departments fully staffed and open six days a week; free loaner cars, while others offer discount rentals and free oil changes when cars are brought in for service.

The companywide service comeback rate has been "running about 7 percent," Campbell said.

"We are not particularly happy with that," he said. "It came down a little bit from last year's 8 percent. We have some dealerships that are consistently in the 3 to 4 percent range, and we have a few in the 12-percent range.

Customer comeback rates, which measure the frequency with which customers must return to fix a problem that should have been fixed the first time, are monitored closely by Campbell Automotive.

If tracking charts indicate that a dealership has a high comeback rate, Campbell says the company first looks for "ideas from managers. The ideas will be carried out better if they originate from them. And then we will throw in some of our own ideas.

"I am not looking at this as a cop-out in any sense, but some product lines are going to have more comebacks than other simply because the cars have more defects and have more repairs."

Campbell acknowledged the company has fewer of these problems at its Japanese dealerships than at its domestic and European outlets.

For the future, Campbell said the company is considering, among other things, unconditional service guarantees in an effort to compete with independent service outlets, which the public perceives to be less expensive than new-car dealerships.

The firm also is studying ways to reduce the time it takes to get a car serviced.

Campbell Automotive tested at three dealerships a program that provides people who bought cars from those dealerships free loaners when they bring their cars in for mechanical or warranty work. The program was extended to all dealerships as of May 1.

"We believe the loaner program, which was very successful, will give much better service retention," Campbell said.

Since the company was founded in 1965, it has sold more than 90,000 vehicles. Each year, Campbell Automotive sells in excess of 9,000 cars and trucks and services more than 60,000 vehicles.

Campbell Automotive reported sales of $145.30 million in 1988, a 4.6 percent increase over 1987. Vehicle sales for 1988 were $118.55 million, up 2.8 percent. Service and body shop revenue jumped 17.2 percent to $11.27 million, while parts sales were $15.48 million, up 11.1 percent.

Lex Service, a publicly held British auto retailer, recently took a 50 percent stake in Campbell Automotive, making it the only dealership in the United States with public ownership.

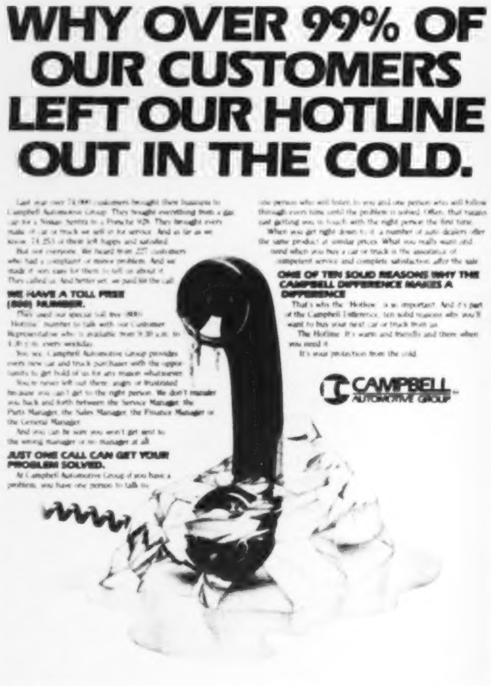
Employment at Campbell Automotive's eight new-car dealerships averages 65 persons, with the largest employing 100 and the smallest 30.

Company policy is to promote from within "to offer our employees a career path rather than just job," Campbell said. He estimated the annual turnover rate among service and parts personnel at "around 30 percent," which is "relatively low around this area," Campbell said.

He said the company also recently revamped benefit plans to encourage employees to build tenure.

"We also put together a number of award and recognition programs to assure our employees that they are an important and vital cog in our wheel," he said.

Campbell operates Campbell Buick-GMC Trucks of Corona; Campbell Ford, Garden Grove; Campbell Mazda, Buena Park; Campbell Mazda, Costa Mesa; Campbell Nissan, Buena Park; Campbell Nissan, Huntington Beach; Campbell Porsche-Audi, Buena Park; and Campbell Volkswagen, Buena Park. Its paint and body shops are in Anaheim and Fountain Valley.



WHY OVER 99% OF OUR CUSTOMERS LEFT OUR HOTLINE OUT IN THE COLD.

WE HAVE A TOLL FREE (800) NUMBER.

JUST ONE CALL CAN GET YOUR PROBLEM SOLVED.

Big 3 weigh contingencies in face of higher CAFE threat

The automotive market's trend toward power and high performance will collide head-on with environmental concerns if Congress raises fuel-economy standards to slow the greenhouse effect.

In the past few months, product planners have been given an urgent mandate: Come up with contingency plans for a line of cars that could meet a dramatically stiffer corporate average fuel economy standard.

"We're looking at a parallel (product) plan — one assuming business as usual, the other assuming a greatly increased CAFE," said Chrysler Motors President Robert Lutz.

A high-ranking General Motors engineering source said "the possibility of stricter CAFE certainly is in our thinking on future engine programs and a little bit on car programs. That has changed in the last six months with the new administration and the vibes we're getting from Washington."

While auto companies are peering uncertainly into the post-Reagan 1990s, they already fear some vehicles may be in trouble.

At Chrysler, production of the proposed Dodge Viper V-10 sports car would be torpedoed by a tougher CAFE, Lutz said.

Even as his own company hopes to introduce a minivan, Subaru of America Chairman Harvey Lamm predicts the long-term demise of minivans: "I think you are going to see it legislated off the market."

One-third of the passenger-carrying vehicles in the United States are trucks. "That one-third emits more (pollutants) than the other two-thirds," Lamm said. Today's CAFE laws, which allow minivans to be counted in the laxer truck standards, "were written in another world," he said. "Trucks had only 20 percent of the market and there were no minivans."

He predicted that large passenger vehicles such as minivans will be forced eventually to run on alternate fuels.

Yet Subaru is not holding up its product planning — including hopes for a minivan or sport-utility-type vehicle — to await a CAFE decision, Lamm said.

A draconian plan to clean the air in the Los Angeles area has been proposed at the same time as Congress is looking at increasing CAFE to slow global warming. The California plan calls for heavy use of alternative fuels by the end of the 1990s, and elimination of the gasoline engines by 2007.

"California's going to do it first," predicts Thomas Mignanelli, executive vice president for operations at Nissan Motor Corp. in U.S.A. "I don't think the EPA is going to get their act together as fast as California."

Those converging environmental concerns emerge at a time of increased performance, power and fun in the automobile industry. Some auto executives see a sort of golden age of performance cars threatened by the environmental problems.

"If CAFE gets increased," Lutz told a group of automotive reporters in February, "I think everybody is just going to have to refocus on weight and fuel efficiency. And that means what possibly might have been a next generation of superb, American-built, world class rear-wheel-drive luxury sedans may be open to question again."

Last month, William K. Reilly, the administrator of the EPA in the new Bush administration, released a preliminary report calling for a CAFE standard of 40 or 50 mpg by the year 2000.

Auto industry executives compare the new environmental issues to the energy crises of 1974 and 1979, which shook the domestic industry and sped up the market penetration of smaller, more fuel-efficient Japanese cars.

Michael J. Schwarz, emissions control planning manager for the environmental and safety engineering staff at Ford Motor Co., said, "There's no question that global warming is legitimate — that is, there are a number of chemicals that reside in the atmosphere that result in warming the earth."

He said Ford advocates more research and the reduction of carbon dioxide and chlorofluorocarbons "without causing a major disruption in the economy or the industry. We don't think there is a scientific basis for treatment as a panic situation."

Schwarz and other executives contend that the government shouldn't push technology so fast that it results in a bad product.

While the Big 3 have international partnerships for the development or sale of engines, giving them more flexibility than they had a decade ago, Japanese makers remain the big leader in the numbers and kinds of small displacement engines.

George Peterson, an auto product-planning analyst and president of The AutoPacific Group in Newport Beach, Calif., said Japanese manufacturers would be able to respond much faster than domestics because they make smaller cars with more four-cylinder engines, and they develop vehicles with shorter lead times that have shorter life cycles.

Lutz: "If CAFE gets increased I think everybody is just going to have to refocus on weight and fuel efficiency."

"But it would be much more of a problem now for the Japanese than in '74 and '79," Peterson predicted. "They have moved farther upscale than before," with larger cars and more V-6 engines.

Despite the air of urgency in Washington, the Big 3 point out that long product planning times mean that mileage improvements won't come immediately.

"You can't even speak of big CAFE improvements in the next few years," said Albert Slechter, Chrysler Motors' director of federal government affairs. "We are in the process now of designing 1993 and 1994 model products."

And in the early days of the Bush administration, automakers find themselves in limbo. They assume that CAFE will be increased, but they don't know when and by how much.

"The external pressures cause us to lay on paper a series of plans," Slechter said.

"Any company the size of Chrysler, General Motors or Ford has got to put together alternative plans to meet crisis situations. But you can only do so much of that.

"It puts us in a great deal of uncertainty. We go into sort of a continuous mode of contingency planning through the year 2000."

General Motors

GM is concentrating its resources on engine technology more than redesigning entire vehicles to meet existing and possibly stricter future CAFE standards.

Improving existing engines to get better fuel economy is easier in the short term. On the last go around prompted by the 1979 oil crisis, GM downsized and shifted virtually all of its fleet to front-wheel drive.

The company's approach to meeting existing and possibly stricter fuel economy standards while still meeting the market's demand for higher performance is a two-pronged effort: squeeze more horsepower out of existing engines without sacrificing fuel economy and maybe even improving it; and applying new technologies, primarily, multi-valve technology, into new engines. The majority of focus is on V-6 engines.

"Rather than going after the big, bold V-8 engines," said one high-ranking engineer, "we're now concentrating on high-revving V-6 engines, turbocharged engines and multi-valves.

"In the last couple of years," he added, "we have taken our eye off CAFE and fuel efficiency. We have looked at getting raw

see CONTINGENCY, page 23

V-8s dwindle in the '80s

Since 1978, V-8 engine installations in domestic cars have plummeted. While four-cylinder powerplants have taken the lion's share, six-cylinder engines have hit their highest level in eight years.

CAFE PUSH

FROM PAGE 1

product, it has a new engine in it." So Nissan can be flexible in the face of a tougher CAFE.

Domestic auto engineers and product planners say small gains in fuel economy are possible by "tweaking" the technology in the current mix of different-sized cars, but achieving 40 mpg would require a revolution in technology and in the size mix of the new car fleet.

Some government studies apparently agree with the engineers.(See story on Page 24.)

Domestic automakers argue that they build and sell large cars because that is what the market demands.

"Look at the success of the larger cars: Lincolns, Cadillacs," said an engineer with long-time domestic experience, principally in powerplants. "The mid-market is going upscale with larger, heavier cars. If the market tells us they don't want to buy efficient cars, we can't improve CAFE if we can't sell the cars."

Government, he added, will have to convince the public it is in their interest to purchase economical cars.

Deborah Lynn Bleviss, author of a book that has been influential in forming the fuel economy policies forwarded lately by environmentalists and government agencies, argues that the domestic manufacturers will be hurt by their inability to build small cars.

Import manufacturers, particularly the Japanese, will be able to ship their smaller home-market cars to the United States and will limit the number of captive imports they supply to their domestic partners, thus gaining more control over the market, she said.

But Bleviss maintains that as an alternative to re-entering the small car market, domestic manufacturers can create a niche of larger, fuel-efficient cars by using lighter materials, aerodynamics and advanced engine technology.

Bleviss, a physicist and executive director of the International Institute for Energy Conservation, a non-profit group which explores energy efficiency improvements for developing countries, studied the technology of auto manufacturers around the world. The result was her influential book, The New Oil Crisis and Fuel Economy Technologies.

New government proposals call for CAFE requirements of 40 to 50 mpg by the turn of the century, a prospect that frightens many manufacturers who are struggling to meet the current corporate average fuel economy standard of 26.5 mpg.

While the domestic industry argues for caution in raising CAFE, some analysts, environmentalists and government officials say the technology already exists to achieve substantial increases in fuel economy.

They cite experimental and prototype vehicles built by automakers to demonstrate fuel-economy technology. These vehicles include:

- The Volvo LCP 2000, a 65 mpg diesel-powered car.
- The Volkswagen E80, a diesel research vehicle that has returned 74 mpg city and 99 mpg on a highway test.
- The Toyota AXV diesel, which returned 89 mpg city and 110 mpg highway.

But domestic automakers did not offer any diesel-powered cars in 1988, down from nearly 7 percent of the market in 1981.

As for any significant short-term gains in fuel economy, domestic automakers have told Congress they're tapped out.

"Exotic experimental vehicles that have achieved very high fuel economy at GM and elsewhere are not evidence that cost-effective technology exists," said Marina v.N. Whitman, vice president and group executive of General Motors public affairs staff,

GLOBAL WARMING?

CONTINGENCY

FROM PAGE 22

power. Now we're looking at how do we get power with technology?"

Of the new technologies, four-valve engines are receiving the most attention. GM presently is the only domestic automaker to produce its own multi-valve engine — the 2.3-liter Quad 4. The engine is also the only domestically produced four-valve four-cylinder powerplant.

But the only other four-valve four-cylinder under consideration is a variation of the engine used in Saturn.

For the most part, GM is looking at using four-valve technology in its V-6 and V-8 engines. GM is known to have under development a 3.4-liter, 24-valve, overhead cam V-6 engine that will debut in the 1991 model year in GM's mid-sized line and a year or more later in the Pontiac Firebird and Chevrolet Camaro. GM also is developing with Lotus a 32-valve V-8, codenamed Northstar.

Use of turbochargers and superchargers will probably be limited to niche vehicles. Turbochargers will go into high-performance, sporty models like Pontiac Grand Prix, while superchargers will be used on luxury cars to give the feel of a larger engine off the line.

One example of GM's direction is the 3300 engine, introduced this model year, which uses conventional technology to improve the V-6. Displacement of the engine was boosted from 3.1 liters to 3.3 liters; horsepower increased to 160 horsepower from 125. Refinements were made to reduce friction, increase power and make the engine more reliable. While larger and more powerful, fuel economy increased an average of 2 mpg.

At the Chevrolet-Pontiac-GM of Canada Group similar upgrades are on tap for the 2-liter four-cylinder engine used in the Chevrolet Corsica and Beretta. For the 1990 model year, the displacement will be boosted to 2.2 liters and the engine will be given substantially more low-end torque. Fuel economy will remain the same.

But most of the focus is on V-6 engines, which account for about 55 percent of the engines produced by the automaker.

A contingent of engineers and designers are lobbying for a V-12 engine for Cadillac's top-of-the-line model in the 1990s. But, the V-12 faces stiff opposition from some GM executives, including President Robert Stempel. Higher CAFE and emission standards as well as GM's cost containment efforts may kill that powerplant.

As for alternate fuels, GM is testing variable-fueled vehicles in California. The vehicles use an electrical sensor to measure the type of fuel and make adjustments in air-fuel mixture and spark advance.

GM executives are convinced attention to fuel economy and emissions will intensify in the next year and beyond. But they are trying not to overreact as perhaps they did in the past.

Jack Schmidt, Chevrolet-Pontiac-Canada Group director of powertrain systems, said while improvements in existing engines and new engines are in the works, GM is waiting to see how dramatic the changes in CAFE are before acting. "A requirement for a 40 mpg car is a lot different from putting the standard beck to an average of 27.5 mpg," he said.

Ford Motor Co.

A year after Ford made waves by launching a trio of high-performance cars — Taurus SHO, the Probe GT and Thunderbird Super Coupe/Mercury XR-7 as symbols of a new generation of performance — the company is preparing for the day when performance is defined in terms of miles per gallon, instead of miles per hour.

"CAFE has once again emerged as a major strategy issue," says a Ford product planner. He said resurrected concerns about the environment — and the amount of gasoline cars burn — have prompted Ford product planners to begin drawing up a variety of contingency plans.

If CAFE climbs dramatically, the product planner said "maybe V-8s and luxury cars won't be a No. 1 concern."

A new modular engine program that includes a V-8 is being readied for an early 1990s launch. But if stricter CAFE calls for a different mix of products, the modular nature of the engine program would allow Ford to respond more quickly than it has before.

While the new engine program is expected to yield improved fuel economy and fewer emissions, the chief asset is in manufacturing flexibility.

Because parts and components are shared, Ford will be able to shift production from one engine to another more quickly than it has before. The head of Ford's engine division has said that his goal is to be able to respond to a shift in demand within two or three years, as opposed to twice that time currently.

The first phase will come in April 1990, when production of a modular 4.6-liter V-8 begins in Romeo, Mich. A V-6 is expected to be built in Cleveland two years later. Ford officials have said a four-cylinder powerplant could be spun from the program.

Engines built under the effort will have a range of displacements. Multi-valve engines will be available, as will aluminum and cast iron blocks.

Meanwhile, when Ford changes its Escort next year, it will rely on 1.8-liter four-cylinder engines from its Japanese partner, Mazda. A new 2.3-liter four-cylinder engine program codenamed Zeta is in simultaneous development in the United States and Europe.

On another front, Ford will take a big step later this year with its alternative fuel program. The automaker will send a fleet of cars to California that can run on gasoline or methanol.

The "flexible-fuel" idea represents Ford's efforts to develop a vehicle that is less dependent on gasoline — and less of a contributor to air pollution.

Ford's long-term goal is to sell some cars that run solely on methanol, said Harvey Klein, a manager in Ford's fuel systems and powertrains technical support department. During the second half of 1989, Ford will begin delivering 200 to 600 cars over the next three years to the California Highway Patrol and other government fleets.

He sees the effort as the first major test of a program that could bring a Ford flexible-fuel vehicle to the market by the mid-1990s. Klein thinks the system — after durability tests are completed — could be ready for showrooms within five to seven years.

Chrysler Motors

Chrysler Motors has prepared an array of product scenarios to try to anticipate various proposed regulations, according to Albert Slechter, Chrysler Motors' director of federal government affairs.

No product plans have been delayed by the uncertainty, he said.

But Chrysler Motors President Robert Lutz has said increased CAFE standards would kill production of such high-performance vehicles as the proposed Dodge Viper V-10 sports car.

Despite the mood in Washington, Chrysler continues exploring performance engine options.

Francois J. Castaing, Chrysler Motors' vice president for vehicle engineering, has said the company is contemplating development of a V-8 engine for passenger cars in the 4- to 4.5-liter range. Chrysler ceased offering V-8 passenger cars when production of the M-body Chrysler Fifth Avenue, Dodge Diplomat and Plymouth Gran Fury ended in 1988.

Earlier this year, Castaing said: "If the fuel economy and fuel supply in this country do not become a real issue in the next five years — which we don't know yet — and if we see this is the trend of the industry, we need a small V-8 for our passenger cars."

Like GM, Chrysler is working on a passel of pumped up V-6s. A new Chrysler-built 3.3-liter V-6 is slated for a fall introduction. The company is considering four-valve and turbocharged versions of that powerplant and four-valve and turbocharged versions of a 3-liter Mitsubishi-built V-6 it uses.

Chrysler's four-cylinder engine program, which includes both 2.2- and 2.5-liter powerplants, is slated to get a Lotus-designed four-valve head.

At the sheer performance end of the market, an area Lutz says may be threatened by higher CAFE, is an 8-liter V-10 program for both Viper and truck applications, a 32-valve 4.5-liter Lamborghini-designed V-8 and a 4.5-liter V-8 supplied by Mitsubishi.

Chrysler is also undertaking what it calls a "significant effort" in exploring methanol-powered vehicles, according to Richard Schaum, Chrysler Motors executive engineer for powertrain systems.

Chrysler has a program to produce a methanol-powered vehicle in limited numbers by the 1993 model year if major technological hurdles are overcome and a supporting infrastructure exists. The technology is favored for full-size car production, although the first test units will likely be based on minivans.

Chrysler is developing two families of methanol-fueled vehicles. One is a gasoline-tolerant methanol vehicle, while the other, which is getting more attention, is a flexible-fueled vehicle.

On the gasoline-tolerant vehicle, "we raise the compression ratio of the engine to take full advantage of methanol's octane," Schaum said, adding the powerplant is designed to run primarily on methanol, but would tolerate some gasoline if methanol is unavailable.

The flexible-fueled vehicles "run anywhere from pure gasoline to 85 percent methanol. The vehicle will perform equally well on either fuel," Schaum said.

Chrysler will supply five gasoline-tolerant methanol vehicles and five flexible-fueled vehicles to the Los Angeles South Coast Air Quality Management District by mid-summer for a demonstration/evaluation program, Schaum said.

In addition, Chrysler will unveil a methanol-powered LeBaron J-coupe at the SAE Government/Industry Meeting being held in Washington this week.

Automotive News Staff Reporters Mary Connelly, Michelle Krebs and David Versical contributed to this report.

Alcohol loophole could worsen global warming

A law designed to encourage the use of alcohol fuels to reduce urban ozone pollution provides automakers with a loophole that may help them beat higher fuel economy standards prompted by global warming legislation.

And ironically, those alcohol-based fuels may even contribute more carbon dioxide, a gas that is linked to global warming.

The Alternative Motor Fuels Act of 1988 allows manufacturers of cars that run on alcohol-based fuels, usually a mixture of alcohol and gasoline, to rate those cars only on the amount of gasoline consumed.

Cars that run on a mixture that contains at least 85 percent alcohol are rated by a formula that can provide for an EPA fuel economy rating nearly four times higher than a similar gasoline-powered car, according to EPA.

For example, a car that gets 27 mpg running on a fuel that is at least 85 percent alcohol can be "rated" by the EPA at 100 mpg. In actuality, though, a methanol-powered car gets about 60 percent of the miles per gallon of a gasoline-powered car.

There is no limit to the effect such alcohol-dedicated vehicles can have on a manufacturer's fleet corporate average fuel economy rating. The fuel economy credit program starts in 1993 and runs to 2004.

For so-called flexible-fueled vehicles that can run on any combination of alcohol and gasoline, fuel economy is based on an average between the amount of alcohol and gasoline consumed.

In general, such cars can carry a CAFE rating that is slightly more than 150 percent higher than a similar gasoline-powered car. But since the vehicles can burn a range of fuel from virtually pure alcohol to pure gasoline, the bill limits these vehicles' contribution to raising a manufacturer's CAFE to only 1.2 mpg over their average.

Proposed global warming legislation links reduced carbon dioxide emissions to fuel efficiency. In a one-to-one swap of gasoline for methanol, the favored fuel from a cost standpoint, carbon dioxide emissions are about equal. Methanol is slightly more efficient in an engine, according to preliminary EPA analysis, but CO2 emissions from the production process of changing common natural gas to methanol would mean no net reduction in CO2.

When methanol is manufactured from coal in a plant of current design, now a rarely used process, CO2 emissions per vehicle double, EPA analysis indicates.

CAFE PUSH

FROM PAGE 22

during Senate testimony last month.

"These highly optimized experimental subcompacts do not have the utility and performance characteristics demanded by an overwhelming majority of consumers," she said, adding that GM is involved in research on a number of fuel-saving technologies, but "there are no technological breakthroughs affecting fuel economy on the horizon."

Ford Motor Co. echoes that sentiment.

"Changes in consumer demand in the past several years have caused Ford CAFE to plateau," Helen O. Petrauskas, Ford vice president for environmental and safety engineering, said recently during a Senate hearing. "This has occurred despite our introduction of extensive new technology and emphasis on small car sales.

"To maintain high levels of small cars — it takes about two small car sales to offset (the high fuel consumption of) one large car — Ford has invested some $3 billion since 1982 in rebates and other marketing incentives for the purchase of our most fuel-efficient vehicles."

Al Slechter, Chrysler Motors' director of federal government affairs, said, "Certain fuel efficiencies take the manufacturers from the world of the possible to the world of the not possible."

In an interview, Slechter said CAFE numbers in the range of 40 to 50 mpg "are just incredible to envision."

Chrysler believes the greatest CAFE improvements are likely to come from vehicle downsizing rather than technology gains.

"We have taken the very big whacks at the internal combustion engine pretty much to its absolute limits as far as burning fuel . . . and at transmission technology, aerodynamics and tire design," Slechter said.

Substitutions of materials are unlikely to yield large improvements in CAFE, he said.

"You would have to be talking about material substitutions that would take half the weight out of the vehicle. . . . I can see going to some pieces but not on the order of 50 percent of the vehicle weight," he said.

But others aren't convinced.

Author Bleviss said, "My contention from day one is that we don't have to switch to small cars. There could be the same mix."

She advocates systems engineering — designing the car to be fuel-efficient from the ground up. The result, she said, is that the V-8 engine will fall by the wayside, but not performance and acceleration. But ultra-high performance vehicles will probably not be in abundance, she said.

"People are demanding power, but perhaps they are getting more than they need," Bleviss said.

At 45 mpg, futurists see nation of Escorts priced to sell

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Automakers would essentially give away small cars while selling luxury cars at a tremendous premium if a 45 mpg fleet fuel economy rating were to be mandated by 1995.

That's one hypothesis of a recent Department of Energy study regarding the market implications for domestically produced cars resulting from greatly increased fuel economy standards. Another hypothesis is that nearly nine out of 10 domestic cars would be Ford Escorts.

Those findings, while admittedly "absurd," show how far the current market conflicts with achieving 45 mpg.

The study predicts that a 45 mpg CAFE in 1995 would distort the market to such an extent that automakers would have to bribe consumers to buy small cars. Makers would have to knock almost $5,000, or more than half the sticker price, off the market-driven retail price of the most popular subcompact model and increase the cost of some luxury lines by as much as three times that amount to sell a fleet that would average 45 mpg.

To project a fleet of 1995 domestic cars, the researchers used a computer program that considered the sensitivity of each car to price and an initial market share that reflects current consumer demand, said David L. Greene, a member of the research staff at the Department of Energy's Oak Ridge National Laboratory and one of the authors.

When the computer model was pushed to 45 mpg, it showed that the Ford Escort cornered 88 percent of the domestic market, compared with its 5.6 percent baseline share. To entice buyers, the Escort would have to be priced at $4,906 below its market-driven retail price.

"Forty-five mpg for the fleet is pushing the model too far," Greene said. "One car that has 88 percent of the market is absurd. . . . Our point is that the market gets strange when pushed that far. There are only a handful of cars that could get 45 mpg."

The Escort fares best because of its relatively high market share going in and the fact that it will continue to be improved in Ford's future product plans.

General Motors' Saturn, which won't be introduced until 1990, comes out second under a 45 mpg CAFE with a 5.6 percent market share. At that level, the car would have to be offered with a $1,323 incentive, the model concludes.

Only one car line, a Dodge Shadow/Plymouth Sundance, would carry 0.5 percent market share in the 45 mpg model. The rest are either at a 0.3 percent market share or less.

Of the 40 domestic car lines in the model, six were eliminated altogether and 17 accounted for only 0.1 percent each of the market in the theoretical mix of cars that would achieve a 45 mpg fleet average.

The computer model also predicts the demise of some standard full-size cars such as Ford's Panther platform (Crown Victoria, Mercury Grand Marquis) and GM's H- and C-bodies. H-body cars are Pontiac Bonneville, Oldsmobile 88 and Buick LeSabre, while C-bodies are Oldsmobile 98, Buick Electra and Park Avenue, and Cadillac De Ville. In order that none of these cars are sold under a 45 mpg CAFE, the model says the Crown Victoria/Grand Marquis series would have to be priced $18,401 over its list price in a 38 mpg scenario, while the H- and C-bodies would carry disincentives as high as $15,107 and $14,409, respectively.

"The social cost of this radical alteration (a 45 mpg CAFE) is estimated at $4,177 per car, or over $40 billion per year" for a sales volume of 10 million cars industrywide, the study says.

While the study does not reflect the views of the Department of Energy, its authors submitted the work to the Energy Journal last January for peer review.

CAFE PUSH

FROM PAGE 23

The Natural Resources Defense Council cites the Bleviss book as one basis for its support of legislation requiring a 45 to 50 mpg CAFE by the year 2000, according to Richard Ayres, senior Natural Resources Defense Council attorney.

Daniel Becker, director of the Sierra Club's Global Warming Campaign, said the Environmental Group has proposed and supports legislation that calls for 45 mpg CAFE standards by 2000.

A car that returns 18 mpg, he said, emits 57.75 tons of carbon dioxide in its 10-year lifespan, compared with 26 tons of carbon dioxide from a car at 45 mpg, he said.

Over the past 15 years, automakers have doubled their EPA-certified fuel economy numbers from 14 mpg average to 28, according to Barry McNutt, a U.S. Department of Energy policy analyst. Under actual driving conditions, new cars have improved from about 14 mpg for 1974 models to 24 mpg for 1989 models, he said. As newer, more fuel-efficient cars are introduced and older less-efficient models retired, the average fuel economy of the entire U.S. passenger car fleet has edged upward from 14 mpg in 1974 to 18 mpg in the 1988 model year.

To accomplish this fuel economy improvement, automakers have switched from rear-wheel to predominantly front-wheel drive, with improved aerodynamics, engines and transmissions. Cars have also been reduced in both size and weight, while interior volume suffered little.

But in the last three or four years the public has demanded high performance and automakers have delivered. In many cases the old approach of stuffing a big V-8 under the hood has given way to producing power from smaller six- and four-cylinder engines with the aid of four-valves per cylinder, and turbo- and supercharging. Among these hopped engines are Ford's 24-valve Yamaha-built V-6 in the Taurus SHO, the 16-valve GM Quad-4 and intercooled and turbocharged four-cylinder engines by Chrysler.

While automakers are quick to tout their powerful new V-8 engines, the installation of such engines has dwindled from almost 66 percent of Big 3 production in 1978 to less than 19 percent in 1987. During that same period, four-cylinder production among domestic makers exploded from about 10 percent to 55 percent.

Japanese imports, on the other hand, won't be introducing their first V-8 engines until Toyota's Lexus and Nissan's Infiniti luxury cars bow this fall.

The renewed interest in high performance has seen four-cylinder penetration among domestic manufacturers actually decline for the first time since 1983, to 49.3 percent in 1988.

But that did not translate to more V-8s.

Rather, V-6 production grew from 26.3 percent of the 1985 domestic model mix to 33.96 last year, its biggest jump since 1980. V-8s actually declined to 16.7 percent in 1988 from 18.5 percent a year earlier.

Industry sources say the technology is available to boost CAFE to 30 to 32 mpg by the mid-1990s. But they maintain that buyers won't pay for these improvements, nor opt for smaller cars if fuel prices remain low. At Chrysler Motors, which has the highest CAFE levels among the Big 3, officials advocate a gasoline tax of up to $1 per gallon as a way of encouraging the market to buy fuel-efficient cars.

Some of the domestic engineers are reluctant to be identified because of the sensitivity of the issue. But all the engineers interviewed for this story said their credo is to extract more efficiency from the product.

"In moving from 26.5 to 27.5 miles per gallon, the industry would probably do some size-mix gymnastics," said one source. "At 30 miles per gallon, we would start looking at aerodynamics, engine technology, and lighter parts."

Improvements in aerodynamics can be made along with normal styling changes. Cars are now 20 percent to 30 percent more aerodynamic than in the 1950s and 1960s.

Ford says aerodynamic designs resulted in a CAFE gain of one mpg from 1977 to 1983, and the company is sighting another 1.5 mpg gain by 1990.

To reach 30 mpgs, one source said manufacturers might choose to incorporate lighter, less powerful engines or more efficient engines, such as those with four-valves per cylinder.

"Over 30 or so miles per gallon, we would have to re-do the car, consider alternate fuels and make drastic changes in car size and shape," the source said. "You would have to re-think your car company (lineup): how many scooters would you have to sell to sell a luxury car."

If large economy improvements — into the 35 to 40 mpg range — are mandated, the industry will have to introduce new technology and hardware. As a powertrain expert, the engineer noted that engines with four valves per cylinder offer the potential to improve fuel economy and performance. Japanese makers are far ahead of the domestics in multi-valve engines. Multi-valve engines allow more efficient passage of the air-fuel mixture and exhaust gases in and out of the combustion chamber than standard two-valve arrangement that allows only one way in and out of the cylinder.

Even so, the engineer said, "It is naive and simplistic to think we can put that technology in every existing car and leapfrog to it."

Currently, General Motors is the only domestic automaker building four-valve per cylinder engines. GM builds the Quad-4, and Mercury Marine builds the soon-to-be offered LT-5 Corvette engine for GM.

FUEL ECONOMY PREDICTIONS:

- **Department of Energy/Oak Ridge National Laboratory/Energy and Environmental Analysis:**
  - **31.9 mpg by 1995 market-driven**
  - **34.8 mpg by 1995 cost-effective**
  - **38.0 mpg by 1995 technically-feasible**
- **Deborah Lynn Bleviss, author of "The New Oil Crisis and Fuel Economy Technologies:"**
  - **45 mpg by 2000**
- **Center for Auto Safety:**
  - **55 mpg by 2001**
- **Natural Resources Defense Council:**
  - **45 to 50 mpg by 2000**
- **Sierra Club:**
  - **45 mpg by 2000**
- **Office of Technology Assessment:**
  - **33 mpg by 1995**
- **DOE's Energy Information Administration:**
  - **34 mpg passenger car by 2000**
  - **25.3 mpg light truck by 2000**
- **Martin Marietta Energy Systems' Energy and Environmental Analysis:**
  - **31.3 mpg passenger car by 2000**
  - **23 mpg light truck by 2000**
- **Data Resources Energy Review:**
  - **30.1 mpg by 2000**

And even the auto community is divided on the merits of four-valve technology as a fuel saver.

Richard Schaum, Chrysler Motors executive engineer for powertrain systems, said multi-valve engine and transmission technology are leading contenders for improving engine output. But he said multi-valve engines are primarily a performance booster.

Nobuhiko Kawamoto, president of Honda Research & Development Co., said his company considers four-valve engines the most efficient available. Honda, which currently uses four-valve technology in half its cars and three valves on the remainder, intends to apply the four-valve technology to all its future models.

Kawamoto said he believes all companies will eventually move to four-valve engines.

Cost has hindered multi-valve engines, chiefly because of the expense of building the twin camshaft arrangement that is the norm with most such designs.

As a result, most companies have reserved its use for higher-priced sporty models.

But Honda developed its single camshaft three years ago, which saves 40 percent off the cost with almost the same performance, Kawamoto said.

While the debate heightens over how to achieve higher mpg, manufacturers believe the difficulties grappling with trade-offs in cost and marketability of technology are lost on the government. At the same time, many executives privately acknowledge that they have a credibility problem stemming from the 1970s, when they argued that they couldn't meet higher energy standards — standards they have since met.

"We (in the auto industry) are interested in our national environment and energy issues," said the powertrain engineer with long-time domestic industry experience.

"There is not nearly enough understanding (in government) of the tradeoffs involved with putting technology into production."

Inventing a new fuel-efficient technology is only half the trick, he said. Then the manufacturer and its engineers have to balance fuel economy with emissions, manufacturing, cost and other considerations.

Fred J. Schaafsma, Chevrolet chief engineer, said, "I can't comment on specific fuel economy numbers. . . . Some of the numbers (projected in the proposed legislation) — wow! — are pretty far out. But do we want to do what's right for conservation and the environment? You bet."

Steven E. Plotkin, senior associate in the Office of Technology Assessment, told the House of Representatives subcommittee on oversight and investigations last month that the new-car fleet could achieve 33 mpg by 1995 by "intensifying the use of technologies that are already used in some car models."

The Office of Technology Assessment is a fact-finding arm of the Congress. Given the current market, the office predicts the average fuel economy of the new car fleet is likely to be 30 mpg or less by 1995.

The existing fuel saving technologies "will be cost-effective to consumers, but nevertheless they are unlikely to be demanded by consumers or provided by manufacturers without additional incentives," Plotkin told the subcommittee.

Studies by Plotkin's office indicate that the increase in performance of all cars from 1982 to 1987 reduced fuel economy levels by 1 to 1.6 miles per gallon from the level it would have reached at 1982 performance levels.

A new-car fleet that achieves 45 mpg will not occur without government intervention to close the gap between what the market demands and what is technically feasible, Plotkin told the subcommittee.

Daniel A. Lashof, an EPA environmental scientist who was one of the authors of the agency's report, "Policy Options for Stabilizing Global Climate," said the small percentage contribution to the greenhouse effect claimed by the domestic auto industry is probably accurate.

Ford's Petrauskas told the Senate hearing that a doubling of the fuel economy of the entire U.S. auto fleet would reduce the build-up of global warming gases by only about 0.5 percent.

But Lashof counters "Any individual contribution from an industry will look small, and it's likely that every industry will say they are not responsible for global warming on that basis. But it is a global problem that requires action."

CAFE credits help Ford, GM

But time may be running out on ways to avoid fines

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — By working a complex system of credits, Ford Motor Co. and General Motors have avoided paying multimillion-dollar fines for years in which they failed to attain gas-mileage requirements.

And while GM has potential liability of more than $150 million — a good portion of that for the 1985 model year when the corporate average fuel economy law was allowed to reach its 27.5-mpg limit — it is using the courts to push for a retroactive rollback that would reduce those penalties.

But new legislation brewing on Capitol Hill and a shift in the market may put both Ford and GM in the uncomfortable position of not attaining minimum CAFE standards even by using stored credits or court challenges.

Under the law, if a maker fails to meet CAFE for a particular model year, it is allowed to apply credits generated by exceeding the law in up to three model years prior to or following the affected model year.

If significantly higher CAFE standards are imposed in the mid-1990s, domestic automakers may find themselves in a bind. According to NHTSA estimates for the 1989 model year, Chrysler Motors is expected to have a fleet average of 27.7 mpg; GM, 26.9; and Ford Motor, 26.6, which will generate few credits against the current CAFE of 26.5 mpg. GM and Ford would have deficits if the congressionally mandated standard of 27.5 mpg were in effect.

The penalties are high. Manufacturers are liable for $5 per tenth of an mpg per car for failing to meet the standard.

Chrysler is the only member of the Big 3 that has never failed to meet CAFE. GM and Ford say they haven't meet CAFE because of consumer demand, and both have lobbied for lower standards for economic and technological reasons.

"The problem has been that manufacturers don't make changes to their cars every year," said David Kulp, manager of fuel economy and compliance for Ford.

"In the early 1990s, we should meet or exceed CAFE. The problem has been, if the sales mix is different than we expected, we need a lead of 36 to 48 months to fix things."

Automakers can make adjustments in two ways when they fail to meet the standard for a model year. They can use credits earned by exceeding CAFE in the prior three years or they can generate credits by surpassing CAFE in the three following model years. The credits were instituted in 1980 and applied retroactively to the CAFE law, which went into effect in 1978.

Neither GM nor Ford had to resort to using credits until 1983 since both exceeded CAFE in 1980-82 when the standard was 20 mpg, 22 mpg and 24 mpg, respectively. But as fuel prices stabilized and dropped and demand for large cars grew, GM and Ford had to draw on the credits generated in those previous years to avoid paying fines.

In the 1983 model year, when the standard was 26 mpg, GM posted only 24 mpg, while Ford's average was 24.3. Both used carryback credits to avoid fines.

"There were no possible means of meeting CAFE but restricting or eliminating all large cars and engine production, which would potentially have had a significant job impact," Kulp said.

Ford also blames its shortfall on late introductions of its more fuel efficient Ford Taurus and Mercury Sable and the Lincoln Continental which did not have full model-year impact on raising the company's CAFE.

Kelp said the boost of 2 mpg from 1982 to 1983 was so high "we would have fallen short of meeting it. Without the credits, we certainly would have had to do something to meet the standard."

For 1983, Ford used credits from 1980 with a value of $105 million. In 1984, Ford again fell short of the 27-mpg standard and used $120 million in credits from 1981. The shortfall occurred again in 1985, when the automaker took $68.5 million in credits earned from 1982 and borrowed $23 million in credits from 1986.

Ford and GM both exceeded the CAFE in 1986, 1987 and 1988. Ford earned $102.5 million credits in 1986; $85 million in 1987 and $42.5 million in 1988. Ford anticipates "being right on 26.5 (the CAFE level) for the 1989 model year," Kelp said.

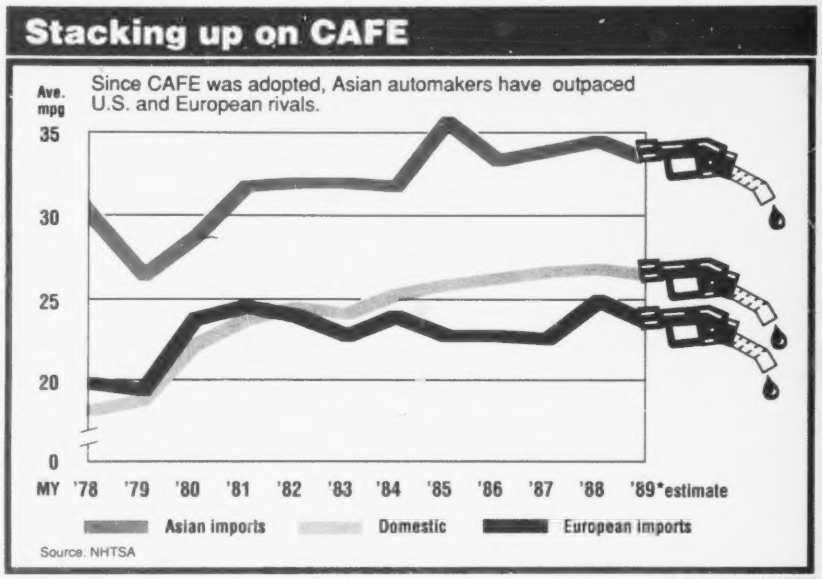
NHTSA has data only through the 1986 model year and said that Ford has credits with a value of $392.5 million.

NHTSA said GM, on the other hand, owes the government more than 140 million credits for CAFE shortfalls between 1983 and 1985. Multiplying each credit (one-tenth of a mile) by the $5 fine results in a figure of $702.65 million.

While NHTSA anticipates that most of that will be offset with credits from 1988 when GM's economy rating of 27.6 mpg was higher than the 26.5 CAFE, GM's own figures show that it may be liable for more than $150 million. That is why it has lobbied NHTSA and has gone to court over a retroactive rollback of 1985 standards. Those challenges to date have been unsuccessful.

The last available figures from GM said it had $61.5 million in credits in 1986, another $122.5 million in 1987 and at least $264 million in 1988. Compared to the NHTSA shortfall number, that leaves GM with a potential liability of $155.65 million. GM declined to provide additional information.

Chrysler has earned credits worth $942 million, but it is unlikely the company will have to use credits since it has no plans to change its car lineup dramatically within the next three years. And those credits expire if they are not used within the three-year carryforward or carryback period.



Since CAFE was adopted, Asian automakers have outpaced U.S. and European rivals.

Imports fear higher CAFE would boost fines, lower sales

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — The tougher gas-mileage requirements being discussed in Congress particularly threaten the pocketbooks of European luxury imports and their buyers.

Manufacturers already pay millions of dollars annually because their fleets fail to meet corporate average fuel economy requirements. In addition, some consumers are forced to pay a gas-guzzler tax if the individual car fails to attain an average of 22.5 mpg. For example, a Jaguar XJ-S V-12 buyer pays an additional $1,850 because the car doesn't meet CAFE.

CAFE rules "are really made for the Big 3," said A.B. Shuman, public relations manager for Mercedes-Benz of North America. "The problem for Europeans is that they're not full-line manufacturers. They don't have little cars to balance out the higher-consumption cars."

High-performance European imports helped create the trend toward bigger, more powerful engines, but now they could be among the first to be squeezed by the resurrected demand for more fuel efficiency.

"We sell performance, and we sell size," said BMW of North America spokesman Tom McGurn. "It's tougher for a company like us, going after a small part of the market, to meet those (CAFE) standards."

In fact, only one of the major high-end European importers — Saab-Scania of North America — meets the 1989 CAFE standard of 26.5 mpg. It has an estimated CAFE of exactly 26.5 mpg because it offers only four-cylinder engines.

Mercedes-Benz has an estimated CAFE average of 21.2 mpg for the 1989 model year and leads the list in fines paid by imports. Those fines are based on sales volume and the size of the miles-per-gallon shortfall.

But due to credits earned in previous years not every vehicle that misses the standard is taxed. BMW was notified of an impending $1.28 million fine for the 1986 model year and $5.12 million for 1987. But earlier credits for better-than-required CAFE reduced its liability to zero for 1986. The credits also are expected to reduce the 1987 fine to $1 million. BMW's liability for the 1988 model year is expected to be around $17 million.

Mercedes-Benz was notified last fall that based on projections it will owe some $20.5 million for failing to meet the 1987 model year standard. Last December it paid a $20.2 million penalty for the 1986 model year. But the company reserved its right to challenge the assessment in court, as Mercedes-Benz of North America is doing in connection with its 1985 model year CAFE penalty of $5.5 million.

Jaguar is expected to be liable for $8.14 million for the 1986 model year; $5.32 million for 1987; and $5.54 million for 1988.

CAFE ratings for the European luxury makes held steady or declined as the standard rose from 26 mpg for 1988 to 26.5 mpg for the 1989 model year. Meanwhile, there are at least five bills in Congress that would mandate fuel economy on the order of 40 mpg by 2000. Most of the bills are concerned with global warming.

From 1988 to 1989, Jaguar's CAFE average fell from 22 mpg to 20.1 mpg because the company sold more cars with V-12 engines. Mercedes-Benz has held around 21 mpg since 1986. BMW's CAFE average rose from 21.6 mpg to 22.3 mpg for 1989; it had been 24.9 mpg in the 1987 model year.

Volvo Cars of North America's rating fell 1 mpg for 1989 to 25 mpg.

In addition to fines for failing to meet CAFE, models that do not meet certain minimum mileage levels also are saddled with gas-guzzler taxes that are paid by the consumer. In Volvo's case, its six-cylinder 760 and 780 models carry a $500 per car gas-guzzler tax.

So far, customers seem willing to pay the gas-guzzler taxes. But a higher CAFE with higher minimum fuel economy requirements could mean a significant jump in the gas-guzzler tax.

Ron Foster, president and chief executive officer of Lotus Cars USA, said even in the price range of a $67,500 Esprit Turbo, relatively good gas mileage is a competitive advantage. The Esprit Turbo squeezes a combined city/highway rating of 24.3 mpg out of a four-cylinder engine.

"It seems if you're already spending $67,000 on a car you wouldn't worry about another $1,200 for the gas guzzler, but it's a factor," he said.

Not everyone agrees that the luxury market is sensitive to gas-guzzler taxes. Mercedes-Benz lists its gas-guzzler tax as a sticker-price line item, but Jaguar includes it in its manufacturer's suggested retail price instead of listing it separately.

"We thought it (listing the gas-guzzler tax) might be a stigma but evidently it isn't," Shuman said. "People want a certain car, and they buy it."

Five Mercedes-Benz models ranging from the 190D sedan to the 300CE coupe don't have a gas-guzzler tax. Penalties for the six bigger cars range from $650 for the 300TE station wagon to $1,500 for the 560SEL sedan and the 560SEC sport coupe.

Ford scores best of Big 3 in Massachusetts lemon index

By Helen Kahn
SENIOR CORRESPONDENT

General Motors' and Chrysler Motors' shares of lemon law cases that were accepted for state arbitration in Massachusetts last year were higher than their market shares, while Ford Motor Co.'s was below its market share.

The real winners were Jaguar, Mercedes-Benz and Acura, which had no lemon law cases in state-run arbitration last year. Next best were Honda and Volvo. Low-volume makes such as Alfa Romeo, Peugeot, Sterling and Yugo fared the worst on a "lemon index" compiled by the Massachusetts' executive office of consumer affairs and business regulation.

A total of 698 cases were accepted for state arbitration last year out of 948 requests submitted. Some of those requests were settled before acceptance or rejection by the state. The number of requests fell 9 percent last year, to 948 from 1,043 in 1987.

The lemon index is based on a manufacturer's number of lemon law cases as a percentage of the state's total caseload compared to the maker's sales penetration. No index number was computed for cars with fewer than 100 registrations in the state in 1988.

If the percentages match, a marque's index is 0. Any variance above or below a maker's penetration results in a positive or negative lemon law index (see chart). The state said a higher index may mean that a manufacturer has vehicles with a higher number of defects or it is not resolving consumer complaints before they reach arbitration or both.

The state's report on lemon law arbitration also shows that last year eight manufacturers — Alfa Romeo, Chrysler, Ford, Hyundai, Mazda, Range Rover, Suzuki and Volvo — settled more than half of their accepted cases before arbitration began.

But while the settlement rates for Ford and Chrysler were high — 73 and 57 percent, respectively — GM's rate was only 37 percent overall. Moreover, Ford settled 15 percent of its disputes before they were even accepted for arbitration — suggesting, said the report, that Ford is addressing its problems early on.

The domestic companies had the largest percentage of the 698 cases that went before state boards. GM had 50 percent, Chrysler had 20 percent and Ford had 12 percent.

When compared with market penetration, GM's lemon law case penetration was 56 percent higher than its market share, Chrysler's was 33 percent higher and Ford's was actually 46 percent less than its market share.

Chrysler's number was only 12 percent higher than its market share if American Motors-Jeep-Renault vehicles are factored out. Those vehicles had a lemon index of 122 percent above market penetration, the state said.

While low-volume import makes like Alfa Romeo, Peugeot, Sterling and Yugo had lemon law indexes ranging from 314 to 1,590 percent of their market penetration, volume imports such as Honda, Toyota and Volvo had lemon law complaints ranging from 73 to 85 percent below their market shares.

The state office said the "probable" reason for the 9 percent drop in arbitration requests, from 1,043 in 1987 to 948 in 1988, is that automakers are settling disputes with consumers over warranty repairs before car owners turn to the state for help.

Not only did the number of requests for state-run arbitration drop, but so did the percentage of cases won by consumers — from 64 percent to 58 percent. In addition, only one decision was appealed last year, compared to 11 a year earlier.

The percentage of late awards also dropped last year, to 1 percent, down from 2 percent in 1987. A late award is additional damages of up to $5,000 per day levied against manufacturers who fail to either appeal or pay a judgment within 21 days. A total of $30,000 was collected for late awards in 1988 from only two companies — Porsche and Nissan.

MASSACHUSETTS LEMON LAW INDEX

Make	State market share*	Lemon law cases	Case pct.	Case pct. U.S. market share
Alfa Romeo.	0.03	4	.58	1,590
Peugeot	0.07	5	.72	938
Yugo	0.07	2	.29	323
Sterling.....	0.07	2	.29	314
Range Rover	0.04	1	.14	303

Volvo	.91	1	.14	−84
Honda	4.7	5	.72	−85
M-B	4.9	0	0	−100
Jaguar.......	1.6	0	0	−100

*—Market shares are rounded.
NOTE: Lemon index indicates whether the number of complaints accepted against a manufacturer is greater than or less than its market share.

In 1988, a total of $3.3 million was awarded to the 236 consumers who were successful at arbitration. The state estimates another $4 million went to consumers who settled before arbitration.

By the end of 1988, Massachusetts had awarded more than $8 million in refunds/replacements as a direct result of its arbitration program, which started in April 1986. The state estimates that $9 million more has been received by owners of lemons who settled their cases before going to arbitration.

The state said the time between acceptance of a case for arbitration and settlement dropped to 46 days in 1988 from 53 days in 1987 and 58 days in 1986.

EPA calls for fines on pipe firms

WASHINGTON — Two manufacturers of standard exhaust tubing that replaces catalytic converters face more than $1.5 million in penalties from EPA.

The Justice Department filed a complaint on behalf of EPA in an Illinois federal court against Ced's Inc. of Addison, Ill., doing business as Products for Power. EPA charged Ced with breaking an agreement with the agency to stop making the pipes and is seeking $75,000 in civil penalties and more than $1.4 million in punitive damages.

In a related action, EPA issued a violation notice and proposed a $150,000 penalty against Perfection Automotive of Livonia, Mich., for the alleged manufacture and sale of catalytic converter replacement pipes.

EPA said the replacement pipes are used widely and illegally by repair facilities regulated under the Clean Air Act and do not improve performance as is often thought. The agency said its actions are part of a continuing effort to thwart the use of products that defeat emission control components.

Pontiac gives STE, 4wd to Grand Am

DETROIT — Pontiac will shift the STE designation and four-wheel-drive layout from its 6000 line to the Grand Prix for the 1990 model year.

STE, short for special touring edition, has been in Pontiac's mid-sized lineup for several years. The 6000-STE sedan, with its European-style ride and handling package, was designed to compete with German-made sport sedans. An all-wheel-drive model was added in the 1989 model year.

A four-door version of the Grand Prix will be offered for the 1990 model year. The 6000 will be dropped from Pontiac's lineup at the end of the 1990 model year.

Auto trade deficit off; imports, exports drop

WASHINGTON — The U.S. automotive trade deficit in passenger cars and light trucks declined 3.1 percent in January because of a 4 percent drop in the value of imported vehicles.

Export value dipped 9.1 percent for the month, but its impact was not as significant since it dropped from a smaller base.

January's decline in the automotive trade deficit followed a 0.9 percent increase in December.

On an annualized basis, the automotive trade deficit was $43.44 billion as of January 1989. This compares to a $46.39 billion deficit for the 12-month period ended January 1988.

For January 1989, U.S. Commerce Department figures show a trade deficit for passenger cars and light trucks of $3.59 billion. That compares with $3.70 billion for January 1988.

Total car and truck imports had a value of $4.18 billion during January 1989, while car and truck exports were valued at $593.4 million.

Passenger-car exports totaled 33,127 vehicles with an estimated value of $415.2 million in January. Light-truck exports for the month totaled 15,679 vehicles with an estimated value of $178.2 million.

Passenger car exports were up 141.6 percent to Japan and 22.5 percent to nations labeled "others" by the Commerce Department. Passenger-car exports to Japan totaled 1,655 and to "others," 12,168 units for the month.

On the import side during January, Japan's car shipments to the United States declined 12.5 percent. The value of Japanese shipments fell 9.3 percent for the month. Both the value and quantity of Japanese truck imports declined as well.

Total car and truck imports from all nations had a value of $4.18 billion in January, down 4 percent from the $4.35 billion worth of imports recorded in January 1988.

There were 406,100 finished vehicles imported to the United States in January 1989, compared with 451,545 in January 1988.

Imports of passenger cars reached 324,779 units for the month with a value of $3.46 billion. Light-truck imports totaled 81,321 units, with a value of $719.6 million. The value of imported trucks surged 36.7 percent from a year earlier, while shipments increased 13.3 percent.

The increase in the value of truck shipments was primarily due to a 95.8 percent increase in the value of trucks shipped from Canada. Canada sent 43,400 trucks to the United States in January 1989, compared with 21,934 in January 1988.

Swedish car shipments to the United States rose 38.6 percent in January with a total of 13,058. France also increased its shipments. They were up 83.9 percent for the month to 1,041 automobiles.

As noted, Japanese-car shipments dropped 12.5 percent for the month and their value was 9.3 percent lower than a year earlier.

Japanese truck imports were off 23.8 percent and their value was down 10.4 percent.

Japan shipped 150,382 cars to the United States in January, down from 171,923 one year earlier. Truck shipments were 37,849 units, down from 49,685 units in January 1988.

Also shipping fewer cars in January were: Canada down 5.5 percent; West Germany off 20.8 percent; South Korea, 22.6 percent; Mexico, 60.3 percent; United Kingdom, 2.9 percent; Italy, 30.9 percent; and Brazil, 33.6 percent. Yugoslavia sent no cars to the United States in January, after sending 4,489 automobiles to the United States in January 1988.

Mid-April sales climb, but slowly

Domestics register 4% gain after whopper early in month

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

Sales of cars built in the United States continued to climb in the second 10 days of April but at a slower pace than in the first sales period when they climbed 30.12 percent.

Retail deliveries in the April 11-20 selling period rose 3.67 percent to total 237,386 units compared to 228,991 units a year before. There were nine selling days in each year.

In April's first 20 days, sales of new domestic cars rose 13.92 percent to total 425,994 units compared to 373,945 units a year before.

Sales of light trucks also rose in mid-April but, as it was for cars, the gain was far below the 24.74 percent climb in the first sales period.

Light-truck sales moved up 7.79 percent to total 136,465 units compared to 126,600 units a year earlier.

The combined car and light-truck sales total of 373,851 units for mid-April was 5.14 percent above the year-earlier total of 355,591 units.

In the 10 days of mid-April, Nissan dealers delivered 34.27 percent less cars than a year before. Chrysler Motors' car sales dipped 10.27 percent and General Motors' were down 1.50 percent.

Toyota reported a 328.15 percent increase as sales of its two U.S.-made models rose to a combined 5,977 units from 1,396 in mid-April last year, when the company was building only one model in the United States. Mazda sales in the period were up 78.89 percent; Ford Motor Co., up 14.48 percent; and Honda, up 5.45 percent.

Mitsubishi, a newcomer to U.S. production, reported sales of 698 units in mid-April.

Among the domestic light-truck makers, only Nissan, with a 14.61 percent dip, reported a decrease in sales. GM's light-truck sales rose 15.28 percent; Ford's, 4.94 percent; and Chrysler's, 2.97 percent.

On a combined car-truck basis, Nissan sales were down 23.56 percent, and Chrysler, 3.93 percent. Ford had a gain of 10.63 percent and GM, 3.49 percent.

Atlanta firm tries multi-dealer tent sales

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

An Atlanta-area advertising firm in the coming weeks will introduce its multi-dealer "mega-tent sale" concept for selling new and used vehicles to dealers in Birmingham, Ala., Orlando, Fla., and Augusta, Ga.

J.R. Russell & Associates, an automotive ad agency based in Marietta, Ga., has staged six large tent sales around Atlanta over the past year, each one featuring 10 to 16 dealers and approximately 1,500 cars.

Agency principal Jim Russell said the firm will introduce the concept in other Southern cities.

Russell said the firm organized the multi-dealer tent sales to sell both new and used vehicles, drawing up to 5,000 prospects over a single weekend, with typical sales of 500 to 600 cars per four-day event. They have averaged a 10 percent closing rate, he said.

He said plans were not finalized, but the firm would organize both new and used car tent sales, which his firm markets under the Automania name in the other markets.

The first Automania event in Birmingham is scheduled for May 26-29. Dates for other markets have not been determined.

Russell & Associates also has coordinated Toyota Tent Sales for a number of Toyota dealer groups in the Southeast.

Russell said each dealer pays $18,000 to participate in an Automania. The fee covers marketing, selling space and props and site management during the sale.

"The secret to selling used cars is to treat them like new cars," Russell said. "No one gets excited about going to a used car sale. But if you make it bigger than life, you draw a crowd. You have to overcome the objection that it's just a used car sale."

Russell said the Automania concept relies on a combination of heavy print, radio and television advertising prior to the event. Professional models are hired to greet crowds and a fleet of golf carts is used to usher visitors from dealer to dealer, he said.

A system for sharing customers is devised prior to the event.

The sales are staged at well known locations that have a drawing power of their own, such as amusement parks, Russell said. The events also include concessions, clowns, free gifts, sky tracker spotlights and on-site radio broadcasts.

Sales continue until midnight each night with the grounds patrolled by hired security guards. Cars are washed and shined throughout the day, he said.

"A dealership might spend $50,000 to hold a typical weekend sale at the lot and sell 100 to 110 cars," Russell said. "One of these events would cost the dealer $18,000 to sell the same number.

"It costs about $150,000 to put on an event like this. One dealer isn't likely to pay that much, but when you split the cost among eight or 10 dealers, it isn't that much to spend."

He said some participants have sold between 150 and 175 used vehicles at a weekend event. It is not unusual for a participant to gross $130,000 in a weekend, he said.

"We've simply taken a good idea — the tent sale — and made it better. Dealers usually count on wholesaling their used vehicles. This environment allows them to roll the vehicles at better than wholesale," Russell said.

Van converter Zimmer files Chapter 11 reorganization plan

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

Zimmer Corp. has filed a reorganization plan in an effort to work its way out of Chapter 11 bankruptcy.

The plan, which was filed jointly by the Pompano Beach, Fla., van conversion company and its creditors' committee, would pay $2.25 million to unsecured creditors in addition to other funds the company expects to receive.

Last month, an unidentified private investor committed $2 million in cash to Zimmer.

Myron Fulle, vice president and controller, said that provides most of the payment offered in the reorganization plan.

Fulle said additional money due the company in contingent liabilities and insurance proceeds also has been committed to repaying creditors. He expressed confidence the plan will be approved since it received unanimous approval from the creditors' committee.

Zimmer filed for Chapter 11 bankruptcy last year after a number of setbacks in its van and sport-utility conversion business. Company officials expect to be back in normal operation by year-end.

The reorganization plan and disclosure statement were filed March 24. A hearing is scheduled for May 1 to determine the adequacy of the disclosure statement, followed by a July 17 hearing on confirmation of the reorganization plan.

FORECAST

FROM PAGE 1

geover this summer.

The second-quarter industry plans show a sharp dichotomy between the Big 3 — which combined plan to build 7.19 percent fewer cars than the year-earlier period — and the six foreign-based companies producing in the United States. Those foreign companies upped their scheduling plans from original estimates and now plan to build 30.23 percent more cars this quarter than a year ago.

The biggest year-to-year percentage gain is expected at Mazda Motor Manufacturing U.S.A. Corp., which plans to build 84.75 percent more cars than one year ago when it was just beginning production, while the biggest relative drop is planned by Chrysler Motors — 17.47 percent.

The reaction of the automakers to the market and economy since they issued their first forecasts in early March shows the Big 3 vs. transplants dichotomy, too. General Motors trimmed its initial forecast 3 percent, while Ford Motor Co. and Chrysler cut theirs 4 percent. New United Motor Manufacturing Inc. and Toyota Motor Manufacturing U.S.A. held tight to their schedules, but the rest of the transplants upped theirs: American Honda Motor Co., 1 percent; Mazda, 6 percent; Diamond-Star Motors Corp., 14 percent, and Nissan Motor Manufacturing Corp. U.S.A., 17 percent.

Ann Knight, analyst for PaineWebber Inc., said she expects Ford to again slice its production plans. She expects large cuts at Chrysler and modest ones at GM.

The latest reductions in scheduled production were widely expected. Although domestic-car sales skyrocketed 30 percent in the first 10 days of April, following announcement of massive industry-wide incentives, the year-to-year gain for the mid-April period slowed to less than 4 percent.

"The trigger for us is the (domestic-car) selling rate in early to mid-April, which works out to about 7.6 million to 7.7 million units annualized," Kidder, Peabody & Co. analyst Jack V. Kirnan said last week.

"That's an improvement over the first quarter, but in the biggest incentive programs in the past — in 1985, 1986 and 1987 — the selling rate jumped some 35 to 40 percent over the prior period. Now — with the biggest incentives in history — you'd expect a sales rate of 9 million to 9.5 million units, and 7.6 million to 7.7 million is the response. Things have materially slowed in the industry," he said.

Kirnan lowered his 1989 sales estimate from 15 million to 14.7 million units, including 9.9 million cars instead of 10 million, and 4.8 million trucks instead of 5 million.

PaineWebber's Knight reduced her combined car and truck sales forecast from 14.8 million to 14.5 million for 1989.

The new forecast by Wendy Beale, auto analyst for Smith Barney, is for 14.3 million sales. She lowered her car sales forecast from 10.1 million to 9.5 million, and light trucks from 5.0 million to 4.8 million.

Scott F. Merlis, auto analyst for Morgan Stanley & Co., lowered his combined truck and car sales estimate from 15.1 million to 14.8 million for 1989.

The industry sold 15.80 million cars and trucks in 1988.

Automotive News Staff Reporters Kathy Boyer and Kathleen Hamilton in Detroit and Jim Henry in New York contributed to this report.

DEDRA: *New Lancia aimed at German luxury makes; first model derived from Fiat Tipo platform*

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

MADRID, Spain — Fiat Auto's Lancia unit has launched a major upmarket push with the introduction of its new Dedra medium-sized sedan.

While it is the first model derived from the new front-drive Tipo, Fiat's volume model, Dedra is aimed at competing with entry-level luxury cars such as the Mercedes-Benz 190 and BMW 3 series. It replaces the Prisma in Lancia's line.

Lancia officials said four-wheel-drive and high-output versions of the three-box, four-door sedan are planned for the fall of 1990.

Developed at a cost of 500 billion lira ($366 million), the new notchback signals Fiat Auto's renewal of Lancia's and Alfa Romeo's medium ranges, with the former placing an emphasis on luxury and the latter on sportiness.

An Alfa version of the same platform, the successor to the 75, sold as the Milano in the United States, is slated for 1991.

Though Tipo serves as a basis for the new generation of mid-range Fiat, Lancia and Alfa Romeo products, Lancia officials stressed the differences among the cars.

While Dedra and Tipo share some floorpan components and body parts, the Lancia is 15 inches longer than the Fiat, covering 171 inches in overall length. Dedra is six inches longer than the Prisma it replaces. Both Dedra and Tipo ride on a 100-inch wheelbase.

Fiat said it has no plans to return to the U.S. market with Lancia. Instead, it will concentrate on building sales in the United States with Alfa Romeo.

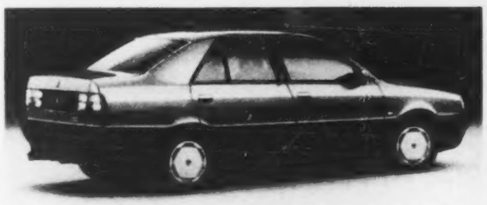
Umberto Visetti, director of Dedra marketing, said there would not be enough capacity to export the new car to America. Lancia expects to eventually produce about 100,000 units annually at the Chivasso plant near Turin, Italy. Daily output will slowly build to 400 units a day.

As a result, though the Dedra goes on sale in May in Italy it won't reach other European markets until early 1990. Lancia plans to export 35 to 40 percent to other European markets.

Dedra is part of an effort to boost total Lancia volume to 300,000 units annually by 1990. Sales last year totalled 274,000, up from 262,000 in 1987 and 232,000 in 1986.

Pricing will be in the 21-25 million lira ($15,400-$18,300) range in Italy.

The car fits into Europe's D segment, or upper-medium class, which last year accounted for sales of 3.2 million units in Europe. The segment includes such models as the Ford Sierra and Opel Vectra.



Dedra's Teutonic styling is evident in its rear treatment

But Fiat is positioning Dedra at the upper end of the segment with the likes of the Audi 80/90 and Honda Accord. This so-called "elite" sub-section of the D segment accounted for sales of 583,000 cars last year. Fiat management believes Dedra's German-influenced styling and options such as anti-lock brake system and electronic suspension damping should also make it a contender against entry-level Mercedes and BMW models.

The Dedra design was a collaboration of Turin's emerging IDEA Institute studio, which headed the Tipo design work, and Lancia's own styling operation. There is some resemblance to the BMW 5 series, especially around the C-pillar. Former BMW designer Ercole Spada heads IDEA's styling activities.

The car also carries some exterior themes reminiscent of the Mercedes-Benz 190 and 300E series. The drag coefficient of the new car is 0.29.

The Dedra has four four-cylinder engine options, ranging in displacements from 1.6 to 2 liters.

OBITUARIES

James H. Fearer

ORANGE, Calif. — James H. "Jock" Fearer, 68, director of marketing services for Daihatsu America, died April 15. Fearer joined Daihatsu at its inception in 1985.

Louis B. Neumiller

PEORIA HEIGHTS, Ill. — Louis B. Neumiller, 93, former chairman of Caterpillar Inc., died April 26. A division of the company manufactures diesel engines.

Court upholds NY lemon law

By Helen Kahn
SENIOR CORRESPONDENT

A New York state appellate court has upheld the state's lemon law arbitration system, but struck down a portion of the law prohibiting automakers from trying to prove in arbitration that the car can still be fixed.

Since Jan. 1, 1987, changes in the New York lemon law allowed consumers the option of paying a fee and using the state-run arbitration program to settle warranty disputes.

The Motor Vehicle Manufacturers Association challenged the program saying that compulsory arbitration deprived them of their right to a jury trial, violated their constitutional "right of access" to the lower civil court, and was an unconstitutional delegation of judicial authority.

A five-judge court unanimously found that the state lemon law is an "equitable remedy" and not an "action at law" to which the right to a jury trial attaches, turning aside the challenge. It also ruled the arbitration program is a "reasonable alternative" to lower civil court review because the program gives "adequate notice, an impartial arbitrator, and a 'full and equal opportunity' for each party to present his case."

Although the judges acknowledge that it is up to the consumer whether or not the manufacturer must submit to the state run program, they note "given the obvious inequality in their bargaining positions, we perceive no impropriety."

But the court agreed with MVMA in striking down a rule that prevented arbitrators from considering evidence that the defect can be fixed on another try.

While letting stand a provision that prohibits the arbitrator from ordering another repair — since the car is presumed to be a "lemon" after four repair attempts — the court said automakers must be allowed to present evidence that the car can be fixed in order to decide whether the consumer is to get a replacement vehicle or a refund.

Odometer tamperer loses high court bid

By Helen Kahn
SENIOR CORRESPONDENT

WASHINGTON — A Wisconsin man who sold used cars with rolled-back odometers to unwitting dealers failed to have his conviction on mail fraud charges overturned by the U.S. Supreme Court.

In a 5-4 decision, the court upheld 12 counts of mail fraud against Wayne T. Schmuck.

Schmuck contended innocence on the mail fraud charges because the dealers involved actually mailed the title applications containing the false information to the state's Department of Transportation on behalf of the cars' buyers.

Schmuck sought a dismissal before trial on grounds the mailings were not part of the fraud charge and wanted to be tried on odometer tampering charges only, which was a misdemeanor when the case was brought in 1983. The motion was denied and he was convicted.

A three-judge federal appeals panel reversed the lower court saying he should have been tried on the odometer tampering charges only, but the full appellate court overturned that decision. It said Schmuck could be convicted of the mail fraud charges without proving that he actually altered the odometers.

The majority of the Supreme Court agreed. It noted that Schmuck's scheme was an "ongoing fraudulent venture" to which the retail sales by dealers was essential. The court found Schmuck had used one person to roll back odometers on some 150 cars and dealt with dealers for as long as 15 years. It also found that he was paid more for low mileage cars.

Unwitting dealers profited from higher prices to consumers even though the scheme did not reach fruition until mailing was involved and titles transferred. As a result, the court said Schmuck was properly convicted of mail fraud.

NOTICE OF SALE

PLEASE TAKE NOTICE that Robert S. Hertzberg, Trustee of MCI Automotive Products, Inc., Bankruptcy Case No. 89-00692-G, has filed an Application to sell substantially all of the assets of this Estate. The hearing will be held on May 8, 1989, at 9:30 a.m. before the Honorable Ray Reynolds Graves, in his courtroom, 231 Lafayette Boulevard, Detroit, MI. The Debtor was a manufacturer and distributor of automotive brake rotors, brake drums and related products. The assets to be sold include inventory, whether finished goods, work-in-process or raw materials parts, machinery, equipment, rights in various unexpired real property leases, rights to purchase products from Pamex under the Pamex Requirements Agreement, books and records, good will, computer data, and other tangible and intangible assets.

The purchased assets do not include accounts receivable arising from the sale of inventory; certain leases in Birmingham, Michigan, Texas and Ohio, tax refunds or any causes of action which the Trustee may have under the avoiding powers provided in the Bankruptcy Code.

The Trustee has received an offer from Excel Automotive East, Inc. ("East Offer"), in the amount of $1,240,000.00. Any competitive bidder must bring to the hearing a certified check or cashiers check in the amount of $100,000.00. Any party or entity submitting such deposit or competitive bid must furnish the Trustee with Financial Statements which demonstrate an ability to purchase the assets of the Estate. A competitive bid will be considered only if: (1) it is from a financially responsible party or entity; (2) it contains the same or more favorable terms and conditions than does the East Offer; and (3) it offers a purchase price which exceeds 105% of the East Offer purchase price.

Pre-sale inspection will be held at 422 Sylvania, Toledo, Ohio 43612, on May 2, 1989, from 9:00 a.m. to 12:00 p.m. For further information contact Michael Cruse or Nanci Rosenbloom at Hertzberg & Golden, P.C., 344 N. Woodward, 2nd Floor, Birmingham, Michigan (313) 540-8282.

PRODUCTION

Car output holds firm; trucks slip

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

U.S. automakers scheduled last week's car output at 160,258, 0.77 percent below the previous week's 161,498, which was the highest week's output so far this year.

The prior week's output was the highest since the week ending Dec. 17, 1988, when 168,519 cars were built.

Last week's targeted production dipped 1.62 percent from the year-ago week's build of 162,905.

So far this year, 2,540,569 cars have been assembled, 8.48 percent more than the 2,341,932 completed last year at this point.

Companies split last week's scheduled output as follows: General Motors, 49.64 percent; Ford Motor Co., 24.07 percent; Chrysler Motors, 12.54 percent; Honda of America Manufacturing, 4.84 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.09 percent; New United Motor Manufacturing Inc., 2.50 percent; Nissan Motor Manufacturing Co. U.S.A., 1.29 percent; Toyota Motor Manufacturing U.S.A., 1.25 percent; and Diamond-Star Motors, 0.78 percent.

Truckmakers slated output at 87,991 units last week, 5.10 percent below the prior week's 92,718 and 0.12 percent short of the year-ago week's 88,094.

Year-to-date, 1,523,766 trucks have been assembled, 7.00 percent more than the 1,424,128 built last year at this time.

Overtime was slated last Friday at GM's Janesville, Wis., plant.

GM scheduled overtime last Saturday at its Oklahoma City and Lordstown, Ohio, car and truck plants.

Overtime was slated last Saturday at Chrysler's Toledo, Ohio, and St. Louis (No. 2) plants.

Daily overtime was scheduled this week at Chrysler's Belvidere, Ill.; Newark, Del.; St. Louis; Toledo; and Warren, Mich., plants.

Car output up 7% in Canada

Last week's scheduled Canadian car production of 21,431 increased 7.47 percent over the previous week's 19,942 but dropped 19.73 percent from the year-ago week's 26,700.

So far this year, 338,113 cars have been completed, 13.75 percent below the 392,015 built last year at this time.

Truck output was targeted at 21,137 units last week, 0.67 percent above the prior week's build of 20,996 and 4.50 percent more than the year-ago week's 20,226.

Year-to-date, 341,748 trucks have been built, an increase of 4.91 over the 325,750 assembled last year at this time.

As reported earlier, Chrysler Motors' Bramalea, Ontario, plant was idled last week for inventory adjustment. The company said it is tentatively scheduled to resume operation today.

General Motors' had overtime scheduled last Saturday at its Scarborough, Ontario, plant.

Kia chief: Ford 4x4 is not planned

By Matt DeLorenzo and David Versical
AUTOMOTIVE NEWS STAFF REPORTERS

DETROIT — The president of Kia Motors last week confirmed that his company is no longer pursuing a joint project to develop and export a small sport-utility to Ford dealers in the United States.

President Sun-Hong Kim said talks between Kia and Ford Motor Co. have ended. Speaking through an interpreter, Kim said that Kia has given up hope of exporting the vehicle, known by the code name UW52, to Ford.

His comments echoed sources who had said previously that Ford has dropped plans to import the vehicle (Automotive News, March 20, 1989). Instead, Ford had been looking closely at having a small sport utility produced by a North American coach builder.

An industry source said last week, however, that Ford is again reassessing its strategy and may decide to build the vehicle itself.

Ford is said to be anxious to bring the project to market to match arch-rival Chevrolet, which this year introduced its own small 4x4, the Geo Tracker. There is also concern that the segment could be saturated by the time the Ford entry would make it into the showrooms, in the early 1990s.

Sun-Hong Kim

Sources in Korea and the United States have said that Modern Engineering, a prototype firm based in Warren, Mich., has a contract to do work on the project.

Though the sport-utility deal is off, Kim said his company is satisfied with Ford's handling of its Festiva subcompact and will continue to rely on the U.S. automaker to market Kia's products in North America. As a result, Kia has no plans to set up its own U.S. distribution network, Kim said.

Ford owns a 10 percent stake in Kia.

"The Festiva is very successful," Kim said.

NADA President Ron Tonkin is interviewed at a Miami television station — just another stop in a nine-day media tour of Florida designed to improve the image of car dealers

TONKIN: *NADA president takes to the road to bolster dealer morale, image*

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

MIAMI — Ron Tonkin listens patiently as a Central Florida woman complains to several thousand listeners about the arrogance, dishonesty and treacherousness of car dealers.

The woman had wanted to buy an inexpensive car. When she thought the deal was done, the salesman told her she would have to put another $500 down to satisfy the banks. The woman walked.

"Do they think we're stupid or something?" the faceless consumer demands of Tonkin on a radio call-in show.

Tonkin, a successful dealer with 12 franchises around Portland, Ore., is dressed impeccably in dark suit, gold-rimmed glasses and a massive headphone set. He is on Day Six of a nine-day media tour through Florida. The president of the National Automobile Dealers Association came to tell the populace that car dealers are getting the short end of the car-business stick these days.

If the mass of Americans would rather talk about the pains of buying a car, his audiences of dealers throughout the country often respond to him viscerally.

Ron Goodman, a Denver Buick-GMC Truck-Nissan dealer, was one of these listed without permission as one of Tonkin's Rough Riders, the group set up to support Tonkin's case against the automakers.

At a dinner during Tonkin's stop in Denver, Goodman heard the call. "I came away a supporter," he said. "I'm behind the NADA, and I'm behind Ron Tonkin."

All over the country, groups of five or 10 dealers find themselves in animated discussions with Tonkin over what they consider factory abuses.

Tonkin finds it trickier to get the same enthusiasm from consumers.

It's the automakers — not the dealers — whose profits are soaring, he tells reporters and audiences over and over. It's the automakers — not the dealers — who are confusing buyers with rebates and finance buydowns. It's the factories whose aggressive retail policies are threatening to run the average dealer out of business.

The Florida woman goes on about how a deal's a deal, and her dealer lied to her. Observers in the studio expect Tonkin to wince: I flew 2,000 files for this? But Tonkin actually seems to enjoy the complaint.

He leans into the microphone to express sympathy.

Industry braces for new laws

By Arthur Flax, Jack Keebler and Roger Howand

WASHINGTON — Predictions of an oil crisis and tightened fuel economy and emission standards mean the government may be getting back into the auto business.

Legislators and government officials warned automakers last week at the Society of Automotive Engineer's annual government/industry meeting that something will be done this year to attack real and perceived environmental problems and the automobile is on the agenda.

Automakers trotted out alternate fuel vehicles ranging from methanol to electric power and even one manufacturer, General Motors, sponsored a methanol-fuel rally from Detroit to Washington to show it is willing to cooperate.

But how cooperative they will be in the long run depends on how far the government wants to go in raising fuel economy laws or clamping down on tailpipe emissions.

Recent events, such as rising gasoline prices as a result of the Alaskan oil spill, cutbacks in production by the Organization of Petroleum Exporting Countries and growing concern over possible global warming trends lent an air of urgency to the meeting.

Sen. John D. Rockefeller, D-W.Va., the keynote speaker, told the engineers he expects an energy crisis within the next 12 years. He said next time OPEC's pinch on oil will be even tighter than it was in the 1970s.

"We don't need to see precisely how it might be triggered, whether through renewed action by OPEC, an oil cutoff in the Persian Gulf, disruption in Mexico or Venezuela or an Exxon type of spill. The truth

RACING

GM may limit competition between divisons in bid to win

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

As General Motors' teams prepare to qualify this weekend for Memorial Day's Indianapolis 500 classic, they also are testing whether GM can make the business of motorsports more businesslike.

GM will be trying to repeat last year's feat of powering the three fastest cars and filling six of the first seven spots with Chevrolet-engined racers.

Considering GM's expensive, high-profile racing effort, it is surprising that until recently its participation was described by one insider as a helter-skelter effort.

Although GM officials are reluctant to talk about racing budgets, those associated with the series in which GM competes estimate the company spends $25 million to $30 million annually.

GM wants to dominate U.S. racing and believes one of the first ways to do so is by organizing the efforts of its divisions, subsidiaries and operating units involved in racing.

Each has been asked to participate in what has been dubbed "GM's teamwork and technology of motorsports."

GM has officially pursued racing for a short time. It has acknowledged its participation in motor-

Big 3 set records for sales, profits

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Chrysler Corp.'s record sales and its 91 percent profit increase for the first quarter boosted Big 3 results to their best level for any quarter.

Part of the reason for the sales record is that a new accounting standard, effective the last quarter of 1988, inflated sales by requiring that the results of financial subsidiaries be consolidated with parent company totals. Even so, this year's first quarter surpassed the restated sales for the first quarter of 1988.

Combined sales for the Big 3 for the first three months of this year were $69.1 billion, up 12 percent from the restated sales of a year earlier. Minus the sales from the automakers' financial subsidiaries, total industry sales were $61.3 billion, compared with $54.9 billion in the first quarter of 1988.

Combined income for the Big 3 was $3.5 billion, a 22 percent improvement over the first quarter of 1988, when the total was $2.9 billion.

Chrysler last week announced its net earnings for the quarter were $351 million, compared to $184 million in the year-ago quarter. Income in the first quarter of 1988 was reduced by a $93 million provision for plant closings in the company's Acustar Division.

Despite a higher cost of borrowing, Chrysler Financial Corp. said its first-quarter earnings of $65 million matched its 1988 first-quarter record.

By contrast, both Ford Motor Co.'s financial services operations and General Motors Acceptance Corp. saw their earnings slide because of of the higher interest rates they had to pay for their funds.

Growth in receivables offset the effect of higher interest rates at Chrysler, a company spokesman said.

Chrysler Corp. Chairman Lee Iacocca said Chrysler's first-quarter performance was helped by "a richer product mix," including Plymouth Acclaim, Dodge Spirit, Chrysler New Yorker and Dodge Dynasty and strong minivan and Jeep sales. Better cost management also helped, he said.

With the phasing out of the K-car, Chrysler's U.S. car market share fell to 10.6 percent in the first quarter from 12.1 percent in the first three months of 1988. But Chrysler's truck share rose to 19.6 percent from 19.1 percent. Chrysler's share of the minivan market edged up to 54.3 percent in the first quarter from 54.0 in the year-ago period.

Chrysler's North American factory sales in the first quarter were 622,825 units compared with 604,682 last year.

Dealers in the United States and Canada sold 540,584 vehicles in the first three months, down from 632,461 a year ago.

As a result, Chrysler — like Ford and GM — ended the first quarter with heavy inventories of vehicles, most in dealers' hands.

BIG 3 RESULTS

High-risk financing firms go to arbitrator

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

A dispute between two companies involved in financing high-risk retail automobile credit is in arbitration, with a third session set for May 18.

The case originated in a lawsuit filed by IDFC Inc. of Carlsbad, Calif., in Superior Court in Los Angeles against Reseda Finance Corp. of Burbank, Calif. in June 1988. IDFC charged Reseda broke its contract by not funding the dealer paper that IDFC, a marketer for Reseda, was sending it.

On Aug. 10, the tables were reversed when Reseda filed a petition for arbitration. The court stayed IDFC's lawsuit Oct. 18.

Reseda is seeking damages resulting from lost profits and damage to its reputation, said M. Edward Franklin, Reseda attorney. He said IDFC's charge that Reseda did not fund some contracts is false. "All paper left with Reseda has been funded," he said.

Last week, the California secretary of state's office said it had no current record of IDFC. In addition, IDFC's advertised phone numbers were disconnected and Pacific Bell had no current listing.

Gary Tabb, who said he was "affiliated with IDFC," said in an interview last week that the principals of IDFC lost their savings trying to salvage their company, and IDFC can't afford a lawyer.

Tabb said that during one of the arbitration sessions, he learned that IDFC had missed the deadline for filing a cross demand, without which the arbitrator can't find in IDFC's favor.

But at his discretion, the arbitrator may allow IDFC to file a cross demand at the session scheduled for May 18, said Reseda's Franklin.

Reseda claims IDFC caused its own problems by giving final approval to contracts, in violation of the agreement.

In its document seeking arbitration, Reseda said IDFC was supposed to obtain automobile sales and lease finance contracts from car dealers, then provide the contracts to Reseda to be funded.

But IDFC went too far, according to Reseda. The document charges that IDFC accepted sign-up fees from dealers who believed they were paying Reseda for guaranteed financing and exclusive rights in specific areas.

IDFC was also supposed to advise Reseda of how much funding was needed so Reseda could secure it, Franklin said. But IDFC didn't keep Reseda informed of its funding needs, he said.

Tabb said Reseda is blaming IDFC because Reseda couldn't come up with the funds.

The arbitrator, Thomas W. Clarke, last week declined to comement on the case.

James C. Borlaug, a director and last-known chief executive officer of IDFC, was located at a phone number listed for First Fidelity Acceptance Corp., whose articles of incorporation listed Tabb as a director, but Borlaug did not return phone calls placed by Automotive News.

Nissan says Italy accepts U.K. Bluebirds

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Nissan Motor Co.'s United Kingdom subsidiary said it is shipping British-built Bluebird sedans to Italy without restriction. But the Italian government denies it has backed down from its previous demand that the units be included in its quota for Japanese cars.

Last month, France agreed to allow British-built Nissans into that country without counting them against the government's quota on Japanese cars.

Previously, French officials refused to consider United Kingdom-built Nissans as European cars until they achieved 80 percent local content. The cars currently have about 70 percent European content, and Nissan promises to raise that to 80 percent by 1990, a year ahead of schedule.

The Italians, meanwhile, said they have not changed their position — they do not view the Bluebird as a European car. They added that any shipments in excess of 1989's quota will be counted against next year's limit.

Nissan, which two years ago opened an assembly plant in Washington, England, began exporting to the Continent last fall.

Italy limits the Japanese to shipping 2,550 units annually from Japan and 14,000 Japanese cars from other European markets.

"Basically, we've got no problems shipping and selling cars in Italy," said a Nissan spokeswoman in London. "We've been shipping according to our plan and they haven't been stopped."

She said the company has sold 558 cars in Italy this year, compared with its quota of 156 cars. In the January-March period, she said, Nissan in Britain exported 1,160 cars to Italy and plans to ship 3,164 during the calendar year.

Renato Ruggeiro, Italy's foreign trade minister, last week denied the government has backed down from its earlier position.

But a Fiat spokesman in Turin said the Italian government has decided not to set a rigid cutoff. Units in excess of the quota will be counted against next year's limit, he said.

"The government denies that there was any kind of an agreement, informal or otherwise, with the British government," said the Fiat spokesman.

In France, Japanese cars are limited to 3 percent of the total market — in 1988, that was 66,000 units. Nissan has shipped 3,000 cars this year to France from England.

Time to vote for All-Stars

Readers will pick 28 auto standouts

Dust off your scouting reports. Look over the talent. Get ready to select the Automotive News 1989 All-Star Team.

As an Automotive News reader, you are eligible to vote for persons in the worldwide automotive industry — vehicle manufacturers, vehicle importers, suppliers, auto dealers — who you believe deserve special recognition for jobs well done during the past year.

There are 28 positions listed on the ballot that appears on Page 32. They include: Chief Executive Officer — North America, Europe, Asia; Chief Operating Officer — North America, Europe, Asia; Division/Group General Manager — North American Company, European Import Company, Asian Import Company.

Positions also include these automotive specialties: Design, Engineering, Product Planning, Manufacturing, Purchasing, Finance, Marketing/Sales, Service/Parts, Truck Operations, Dealer Relations, Government Relations, Labor/Industrial Relations, Advertising, Public Relations, International Relations, Rookie of the Year, Dealer of the Year, Supplier Executive of the Year, Industry Leader of the Year.

Johnson Chevy sold in Texas

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

The former Johnson Chevrolet of Richardson, Texas, Chevrolet's largest-volume retail dealership in 1987, has been purchased by a Kansas megadealer.

Cecil Van Tuyl of Mission Hills, Kan., with his son, Larry, is an investor in 27 dealerships in eight states. He is a majority investor in 18 of those outlets, including the former Johnson Chevrolet.

Van Tuyl is a relative newcomer to the Texas scene. Just over a year ago, he purchased Crest Cadillac in Richardson, Texas. Last December, he bought Toyota of Richardson.

Van Tuyl

He also is moving an Oldsmobile franchise next door to Crest Cadillac, although a neighboring Oldsmobile dealer, Jim Allee, is protesting to the Texas Motor Vehicle Commission that it would put two Oldsmobile stores too close to each other.

Van Tuyl is operating the former Johnson Chevrolet as Reliable Chevrolet.

The dealership's general manager is Thomas Ryan. Ryan once was affiliated with Jim Johnson, former principal of Johnson Chevrolet, in an Austin, Texas, Chevrolet dealership. The partnership ended about six months ago, and Ryan was brought in by General Motors Acceptance Corp. to run Johnson Chevrolet. Jim Johnson continues to operate the Austin dealership.

Johnson Chevrolet was taken over by GMAC last September. The dealership owed GMAC millions of dollars. GMAC had been running the dealership as Patlan Chevrolet since taking it over last fall. At the same time, GMAC was searching for a buyer.

Shortly after the dealership was seized by GMAC, Johnson Chevrolet was placed in Chapter 7 involuntary bankruptcy after three Dallas-area newspapers filed petitions in U.S. Bankruptcy Court. The papers said the dealership owed them a total of more than $238,000.

Van Tuyl, who started as a Chevrolet dealer in Kansas in 1955, declined to reveal details of the Johnson Chevrolet transaction, including the purchase price. He did say he did not assume any of Johnson Chevrolet's debt, which sources had placed at $10 million to $15 million.

Correction

A headline in the May 1 issue should have said that Pontiac will shift its STE designaton to the Grand Prix for the 1990 model year, not the Grand Am. Pontiac's all-wheel-drive layout will remain on the 6000 in the 1990 model year. Pontiac officials said the 6000 won't be dropped after the 1990 model year as the story stated, though they would not give a date for its elimination from the lineup.

Worker screening gives edge

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

As two transplants add second shifts this month, an industry survey indicates both will have more long-term success with their work forces than older plants because of new recruitment procedures.

Diamond-Star Motors, the Mitsubishi Motors-Chrysler Notors joint-venture in Normal,Ill., begins a second shift this week that will eventually employ 1,000 workers, while in Georgetown, Ky., Toyota Motor Manufacturing has just completed training about 1,125 workers who will form a second shift this month.

Both plants are less than a year old. The second shifts will increase Toyota's work force to 2,800 and Diamond-Star's to 2,400.

The companies received state assistance in recruiting and screening employees and conducted extensive employee screening programs. According to an unpublished study by a national personnel consulting firm, that now-standard practice among transplants will probably give the companies long-term advantages over other companies in work force stability and efficiency.

"The company that pre-screens workers not only ends up with a more qualified employee for the immediate job, but there are apparently other, longer-term benefits that will become apparent several years down the road," said Mark Lifter, partner-in-charge at Arthur Andersen & Co.'s human resources consulting group in Detroit.

"Applicants typically demonstrate in the (screening) process that they can communicate better, work in groups and make decisions," he said.

Lifter's group recently completed a six-month study of employee screening practices at automotive plants to determine if they

Hyundai Chairman Chung Se Yung: Carefully studying overcapacity in U.S.

Hyundai reaches high in niche and capacity

By Kathleen Hamilton
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Korean automaker Hyundai is not ready to follow the Japanese into U.S. assembly because, as Chairman Chung Se Yung sees it, as many as 15 U.S. assembly plants may close within three years.

"Your demand is not increasing rapidly; however, you have about 2 million cars excess capacity coming in two to three years' time. So we're going to watch how that will be emerging, then we'll decide what to do here," he said.

Hyundai Motor Co. recently started up its new, highly automated plant in Bromont, Ontario, though, and plans to reach full capacity of 100,000 units annually by 1991 — at nearly the same cost of production as in Korea.

Chung and other Hyundai executives in Detroit for a U.S. government-sponsored conference on selling auto parts to the Koreans repeatedly emphasized that Korea is losing its status as low-cost producer.

"I think our wages will double in three years' time," said Chung, 62, chairman of both the parent Hyundai Group and Hyundai Motor Co. "Our wages average about $1,100 (U.S.) per month. That's very high."

One result is a booming Korean domestic market, which now accounts for 50 percent of Hyundai output, compared to 61 percent two years ago.

"In 1987, our (domestic) car market grew 48 percent from the previous year; last year it was only 35 percent because of short supplies because of labor disputes. But this year, if we can supply enough, we can expand 50 percent over last year, easily," Chung said.

Korea's shift in economy has another impact for Hyundai: It necessitates a shift in product.

The new intermediate-sized Sonata is one step along this path; a 2+2 based on a new Excel will be another.

"With Mercedes Benz, you are paying 100 percent for the car, 200 percent for the star," Chung laughed. "Toyota is the same, Honda is the same. So, when we build up our brand name, then naturally we can go up, too. So this is only a start."

He continued: "We hear a lot about our Sonota in the United States from our dealers. The qual-

FRANKFURT, West Germany — Shipment of Audi 100/200 kits to China under a licensing agreement signed last summer has been held up pending Chinese government approval for necessary hard currency payments.

But VW officials in Wolfsburg denied that the project with First Automobile Works in the city of Changchun has been stymied by ongoing student protests in China.

Students are demanding greater democracy and an end to what they perceive as the privileges of the Communist Party elite and corruption in government. While the government is resisting demand for greater democracy, it apparently offered a ban on the import of luxury cars as part of its initial response to the unrest, sources said.

But like most government pronouncements, the immediate impact of the announcement is unclear. Although Mercedes-Benz and VW each have small operations in China to assemble knockdown kits, the cars are still perceived by the Chinese as imports.

Meanwhile, substantive talks aimed at setting up a separate joint auto production venture in Changchun are being conducted. A delegation from First Automobile Works is visiting Wolfsburg.

The two sides are discussing the construction of a factory to build 150,000 Volkswagen cars annually, beginning in 1996. The vehicles would be for Chinese and export markets.

Volkswagen AG signed a series of agreements with First Automobile Works last year, covering licensing of the Audi 100/200, delivery of necessary tools and supplies, and delivery of parts for local assembly. The two sides also agreed to enter negotiations aimed at a second phase, which calls for construction of a new assembly plant.

The first 500 Audi kits were shipped to Changchun for assembly last summer and production was completed by November. Since that time no additional CKD units have been sent. VW plans to export another 2,000 Audi kits to China this year but the timing will depend on the central government's authorization for the funding.

The schedule announced with the signing of the licensing agreement last summer called for raising Audi output to 30,000 units annually by 1992.

A VW spokesman in Wolfsburg said there has been no delay in the timetable: "We are talking with the Chinese people about the time for shipment. It is still planned for this year, it is just a problem of financing it. They need permission from the government in Beijing because they have to pay in foreign currency. It has taken time, but it is no slower than expected."

He also said the current delay is unrelated to ongoing disturbances in China.

"The problems with the students are concentrated in Beijing, and Changchun is several hundred kilometers north of Beijing," he said.

The Changchun factory also produces a light-duty utility vehicle and the so-called Red Flag passenger car.

Volkswagen is moving forward in its negotiations with First Automobile Works on a separate joint venture in the same city.

He said a German delegation is planning a lengthy visit to China, probably in the early fall, to continue the talks. He said discussions now center on a "medium-sized" VW model, not an Audi. He said the model has not been decided.

Unlike the Audi licensing deal, he said it would be a joint venture in a new factory in Changchun, with Volkswagen holding a minority share.

Automotive News Staff Correspondent Stephen Vines in Hong Kong contributed to this report.

Automotive News expands used-car data

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Wholesale prices of late-model used cars have climbed steadily since February, collectively posting gains of about $200 per month. The figure is based on auto auction reports to the NADA Official Used Car Guide.

The National Automobile Dealers Association unit will provide data on auction prices starting this week in Automotive News.

The new graphs will provide the same information as the ones Automotive News has published for more than two decades. The difference is that NADA's data base is larger.

Lynn Weaver, editor of the guide, said the market is lagging slightly compared to the same period in 1988. But he characterized the market as strong overall.

He cited a later break in the weather this spring and confusion in the new-car retail market as reasons for the slow start.

"Days' supplies of new vehicles are up and incentives are back in full force," he said. "More of the imports are playing the incentive game and have buyback programs."

Prices have eased from last year's because of the influx of a larger number of late-model import cars involved in buyback programs, said Weaver.

In those programs, automakers either sell vehicles to the rental-car companies and then buy them back or give the rental companies a guaranteed rate of depreciation.

If the vehicles are repurchased by the automakers, they are remarketed to dealers through auctions. Under the guaranteed depreciation program, the rental companies sell them at auction and the auto manufacturers make up the price difference.

Also, as new-car retail sales soften, there are fewer trade-ins, which indirectly affects the wholesale market.

Most surprising is the continued strength of 1989 models. They have risen an average of almost 15 percent in price since February. As more 1989s enter the market, Weaver expects prices to level out.

Meanwhile, prices for 1988 models are fluctuating downward as more vehicles enter the market.

Automotive News will publish the graphs twice a month rather than every week. They will reflect a 15-day average and a monthly average of auction prices.

Data is derived from 70 major dealer-only auto auctions reporting to the NADA Official Used Car Guide every week. Those auctions deal in late-model vehicles that will eventually be sold at retail.

"This information will give Automotive News readers an opportunity to follow trends in the wholesale used-car market," said Weaver.

"It will reflect overall trends, not individual prices or local markets. It is a barometer of the used-car market."

A bar graph will show current month-to-date price average, month-ago price average and year-ago price average.

All types of vehicles sold at auctions are used in the samples, from high-dollar luxury cars to compact vehicles. "Any vehicle we get from the auto auctions except as-is or salvage vehicles go into the sample," Weaver said.

April sales up despite late slide

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Domestic car sales declined in late April despite a round of incentives from automakers that are the most generous in two years and were expected to bring buyers into the showrooms in bigger numbers.

Domestic car sales for the eight selling days in the April 21-30 period slipped 13.03 percent to 241,450 from 277,615 for nine selling days last year. The daily selling rate was 30,181 this year, compared to 30,846 last year, a 2.16 percent drop.

Industry car sales for the full month totaled 909,999, up 1.27 percent over 898,580 in April 1988.

Sales for domestic automakers were 667,444 for the month, up 2.44 percent from 651,560 a year ago. Import sales dropped to 242,555, down 1.81 percent from 247,020 in April 1988.

"April was good but not exceptional," said Perry Krabbenhoft, owner of Krabbenhoft Chevrolet-Pontiac-Buick in Northwood, N.D. "All of a sudden, it slowed down. Even our shop has slowed to a standstill."

Despite the spate of incentives offered by automakers, industry car sales for the first four months of the year fell 8.03 percent to 3,261,863 from 3,546,709.

Domestic car sales eased 7.64 percent to 2,369,684 from 2,565,582 in 1988. Import car sales skidded 9.07 percent to 892,179 from 981,127.

Ford Motor Co. was the only one of the Big 3 to report a sales gain in April; its dealers delivered 8.57 percent more cars than they did a year ago.

General Motors' sales were off 2.72 percent, and Chrysler Motors suffered a 6.67 percent decline for the month.

Conversely, three of the transplants moved up for the month. Sales of U.S.-built Hondas rose 20.63 percent; Mazda reported an advance of 78 percent; and Toyota sold almost four times as many U.S.-built autos as in 1988. Its new Georgetown, Ky., plant was the reason.

Nissan didn't share in the prosperity. Sales of Sentra models from its Smyrna, Tenn., plant declined 32.14 percent for the month.

Nissan fared better on the import side with an April increase of 9.94 percent. Honda's imports were up 30.25 percent. Hyundai sales slipped 33.19 percent in April from the year-ago total.

Chrysler: CAFE hike possible

Ford, GM opposed; all back fuel tax to stem CO2

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — At a Senate hearing last week, Chrysler Corp. veered from the ranks of the Big 3 by acknowledging that modest increases in fuel-economy regulations are possible.

But all the domestic automakers lined up in favor of fuel taxes as the best way to slow the "greenhouse" effects of carbon dioxide emissions.

At issue is the threat of global warming, caused in part by the carbon dioxide "greenhouse gas" emissions from automobiles, industry and other sources. The amount of carbon dioxide produced by an automobile is tied directly to fuel economy; i.e. the higher the mileage, the less carbon dioxide.

"Certain modest levels of improvement can be achieved in corporate average fuel economy with adequate leadtime and with an appreciation of the very large costs involved in diffusing existing technology," Robert G. Liberatore, Chrysler Corp. executive director, public policy and legislative affairs, told the subcommittee.

"Existing technology can be diffused more quickly and major technological breakthroughs will be more likely at higher fuel prices," he said, adding, "We recommend energy taxes or fees as the most effective way to spur energy conservation."

Chrysler was also the only domestic automaker to speak in support of CAFE requirements as they now exist.

Liberatore said, "Chrysler believes that CAFE can and should serve as a regulatory safety net, ensuring that zigzags in market conditions do not lead producers to let new-car CAFE erode. . . . But CAFE cannot be a total substitute for market forces."

General Motors and Ford Motor Co. essentially summarized comments made in earlier hearings. Marina v.N. Whitman, GM vice president and group executive for the public affairs staffs, said market forces and not CAFE have resulted in mileage gains.

Helen O. Petrauskas, Ford vice president, environmental and safety engineering, said CAFE puts full-line U.S. automakers at a competitive disadvantage with Asians.

Some members of the subcommittee expressed their displeasure with the GM and Ford positions.

"Your arguments (that CAFE increases will change the American lifestyle) sound like deja vu (compared with the same arguments made before CAFE regulations were first put into effect)," Sen. Richard Bryan, D.-Nev., told Whitman, "Frankly, I am not persuaded that CAFE has not had an impact on fuel economy."

New technologies, Petrauskas said, should yield incremental fuel economy improvements but will require some leadtime and could result in higher consumer costs.

But Subcommittee Chairman Albert Gore, D.-Tenn., said the U.S. fleet contributes as much as one-third of CO2 emissions and the United States emits more CO2 than any other nation. Gore said Ford's suggestions for change were so minimal that the United States would hold no weight in asking other countries to take action on global warming.

Gore has sponsored a bill that would raise CAFE in response to global warming concerns (see box).

Clarence M. Ditlow, director of the Center for Auto Safety, said that current auto company arguments against raising fuel economy mirror those presented in 1975 when CAFE levels were set at 20 mpg for 1980 and 27.5 mpg for 1985.

Ford, Ditlow said, argued that its product line would consist of sub-Pinto-sized vehicles or range in size from below subcompacts to Maverick dimensions. Chrysler, he said, predicted the legislation would outlaw most full-sized sedans and station wagons, and GM said it would restrict the availability of five- and six-passenger cars.

Deborah Lynn Bleviss, executive director of the International Institute for Energy Conservation, and Marc Ledbetter of the American Council for an Energy Efficient Economy, advocated a CAFE system based on percentage improvements over an automaker's CAFE in a baseline year. All CAFE bills now before Congress include such a system. Bleviss and Ledbetter called for a CAFE setup that would provide for a goal of 45 mpg for cars and 35 mpg for light trucks.

Although Ford does not support CAFE increases, Petrauskas said such a system based on percentage improvements would affect all manufacturers equally.

If Congress believes CAFE increases are necessary, the system should take into account the differing size mix among manufacturers and also safety, emissions and other requirements that have an impact on fuel economy, Petrauskas said.

"CAFE is a poor measure of a manufacturer's technical effort because market changes can easily offset the application of new technology," she said. "An equal percentage task for all manufacturers that is independent of sales mix would avoid these inequities."

Petrauskas added that those improvements should be made over a long period of time and not in just one year.

No easy answer to new fuels, high CAFE, low emissions

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON —Automakers, faced with the prospect of greatly increased fuel economy requirements as a response to global warming concerns, contend there is no Buck Rogers solution to doubling fuel efficiency.

Rather, many of the improvements will be incremental and focus on existing technology in the short term, while alternate fuels, such as alcohol blends, may provide a bridge between existing engines and exotic approaches such as turbines, fuel cells or hydrogen power in the distant future.

One of the most promising technologies just now gaining a foothold in production cars involves engines using four valves per cylinder instead of two.

A Department of Energy study estimates four-valve technology can improve fuel economy by 10 percent per car.

As a result, the study predicts this technology will generate a 4 percentage point chunk of the 18.3 percent increase in corporate average fuel economy expected to occur from all market-driven technology by 1995. That gain is predicated on four-valve penetration increasing 40 percent from 1987's level of just 5 percent of the fleet.

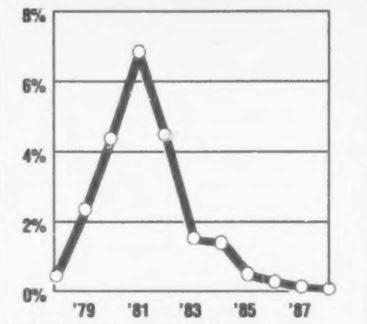
In 1988, 0.8 percent of domestically built cars had four-valve-per-cylinder engines. In import cars the percentage is considerably higher because most of the Japanese and many European automakers offer such engines.

As a well-trained athlete strains less than an unfit individual, even during light exercise, a four-valve engine can be more efficient. It is able to inhale fuel/air mixture and exhale exhaust gases more easily and in a shorter period of time than a two-valve design.

If manufacturers choose to replace large two-valve-per-cylinder engines with smaller four-valve-per-cylinder engines, the customer can get a car with the same performance and improved fuel economy.

Diesel engine installations

Percentage of domestic diesel installations dropped to zero in 1988 from an all-time high of 6.8% of total production in 1981.



*Pecentages include all engine sizes.

Source: Automotive News Market Data Book.

AUTOMOTIVE NEWS / C. BEEVER

But, if a large two-valve-per-cylinder engine is replaced with a four-valve-per-cylinder engine of the same size, the engine will likely be tuned for power and the customer is likely to use that extra power for more acceleration and speed, according to Carmen Difiglio, deputy director of the Department of Energy's Office of Policy Integration.

And that, in fact is what is happening. Most domestic automakers are concentrating their four-valve technology on larger V-6 and V-8 powerplants, while the imports have used the design on smaller four- and six-cylinder engines. General Motors' Quad 4 is the only domestically produced four-valve four-cylinder engine to date.

Ford Motor Co. is developing a 2.3-liter multi-valve four-cylinder engine, code-named Zeta, for the 1990s.

Interest in diesel-engine technology, which was a source of great interest to automakers as a means of boosting fuel economy in the 1970s and early 1980s, has diminished, the victim of stable gasoline prices, problems with diesels converted from gasoline powerplants, and concern about particulate emissions.

Particulate emissions aside, diesels generally are about about 25 percent more fuel efficient than gasoline engines, and nitrogen oxide emissions, a component of photochemical smog, are lower.

"The studies often cited to support high CAFE levels are based on concept vehicles that use diesel technologies, weigh no more than 900 to 1,900 pounds, carry two to four passengers and generally do not meet U.S. safety or emissions requirements," said Helen O. Petrauskas, Ford Motor Co. vice president of environmental and safety engineering. Petrauskas spoke last month before the Senate subcommittee on energy regulation and conservation.

Current research and development efforts at heavy-duty diesel engine manufacturers are primarily aimed at meeting EPA emissions standards rather than CAFE standards, the Department of Energy said.

But, development work on low heat rejection or adiabatic diesel engines continues at the Department of Energy and in programs supported by foreign governments. Adiabatic engine development efforts include the Ceramics Applied to Reciprocating Engine project in Great Britain, Eureka programs involving France and West Germany, the KEBOD program in West Germany and the Japanese Moonlight program.

These engines, which minimize heat loss, are expected to get as much as 30 percent greater fuel efficiency than standard diesel powerplants, the Department of Energy reports. The most likely application will be in the heavy-duty truck segment.

An energy department study released last year, assessing the costs and benefits of alternative fuels, said there are four alternative fuels that could be introduced on a large scale in the United States during the 1990s. They are are methanol, ethanol, compressed natural gas and electricity. Beyond that, technologies offering promise include fuel cells, turbines and hydrogen power.

Alcohol fuels

All of the domestic automakers have built vehicles that can run on methanol, ethanol, gasoline or a combination of the three fuels. Although there are some glitches to be worked out, they apparently offer a practical alternative to gasoline-powered vehicles.

As a result of legislation, manufacturers who introduce such vehicles can add a minimum 1.2 mpg to their CAFE fleet average for flexible-fuel vehicles to unlimited credits from dedicated alcohol-fueled vehicles.

All domestic manufacturers have said a multi-fueled vehicle could be production-ready in the early to mid-1990s.

Late last year, Ford had about 30 flexible-fueled vehicles operating in the United States and Canada. Ford uses an optical sensor coupled to an electronic engine control unit to determine the type of fuel in the car. It adjusts engine performance accordingly.

Ford also built 630 methanol-fueled vehi-

Sales drop continues in Canada

By Bill Vance
SPECIAL CORRESPONDENT

TORONTO — Combined sales of new domestic and imported cars and trucks in Canada declined in March for the third consecutive month, as car sales took their steepest drop of the year.

Rising interest rates were blamed for the downturn. Manufacturers dusted off incentive programs to spur the market.

Combined domestic and imported vehicle sales were down 16.04 percent, compared with the year-earlier period, and were off 9.53 percent for the first quarter.

Combined domestic and imported passenger-car sales were down 16.21 percent in March, compared with the year-earlier period, and declined 11.50 percent for the first quarter.

Domestic and imported truck sales, meanwhile, skidded 15.67 percent in March and slipped 5.32 percent for the first quarter.

"A slowdown in the pace of sales, since the beginning of this calendar year, has been evident and is attributable to the rise in interest rates," said William Atkinson, General Motors of Canada vice president for sales, service and marketing.

Car-sales activity picked up during the second half of March after GM introduced 9.9 percent financing. But GM's car sales were still down 21.87 percent from the year-earlier month.

Ford of Canada's domestic-car sales slipped 17.43 percent in March, prompting the company also to offer low-interest loans.

"It's clear we've got a battle on our hands to combat consumer apprehension about current interest rates," said Jack Clissold, Ford of Canada vice president for sales and marketing. "The industry now is doing that with the most aggressive finance subvention rates in years."

In mid-March, Ford offered loans with interest rates as low as 8.9 percent. "It's definitely a buyer's market out there," said Clissold.

Chrysler Motors suffered the biggest decline among the domestic automakers on a percentage basis as car sales dropped 32.97 percent. In response, it launched the most aggressive incentive program of the Big 3, offering loans with interest rates as low as 6.9 percent for a 24-month term.

Among the imports, Toyota had the highest increase in car sales on a unit basis, with deliveries up 1,166 units over March 1988. Overall, imported-car sales dropped 6.06 percent for the month.

Sales of the Big 3's domestic trucks dropped 19.56 percent in March from the year-earlier period.

Imported trucks also were down, although models sold by GM, Suzuki and Mazda all posted gains. Mazda was the import-truck sales leader for the second consecutive month on the strength of its MPV minivan.

SUNDAY BAN: *VW Canada limits ad melody that resembles popular hymn*

By Alex Law
STAFF CORRESPONDENT

TORONTO — Complaints about the similarity between the music in one of its television commercials and a popular hymn have lead Volkswagen Canada to stop airing the commercial on Sundays.

The melody in the commercial, titled "Changes," is nearly identical to "What a Friend We have in Jesus." Approximately 50 people complained about what they called the misuse of the hymn since the commercial began airing last month in Canada.

Bill Wilson, Volkswagen's advertising and merchandising manager, said some people believe it is sacrilegious to use a hymn for secular purposes. The lyrics to the song used in the VW commercial, which were written by Alan Price for the movie "O Lucky Man" in 1973, deal with the inevitability of change in life.

The commercial, which brought a similar response in Great Britain, shows a woman walking out on her husband or lover. On her way out she discards a ring, a string of pearls, a brooch and a fur coat. When she gets to a Volkswagen GTi, she contemplates throwing the keys down a drain but changes her mind and drives off in the car.

As is the practice with all commercials, Canada's two national networks, the Canadian Broadcasting Corp. and Canadian TeleVision, considered the VW spot before it ran. When complaints were received, they reconsidered it and again gave their approval. A Canadian TeleVision affiliate in Ottawa, Canada's capital, has stopped running the commercial.

Wilson said that to him, Price's song and the hymn sound similar. As a courtesy, and to show that the company had no disrespect for the Christian faith, VW asked the networks to stop airing the advertisement on Sundays.

Future GM cars will use powerful microchip

AUSTIN, Texas — General Motors has told Motorola Inc. it plans to use a new Motorola 32-bit microprocessor for managing a number of functions in its next-generation vehicles.

The microprocessor, a single chip, is the 68332 and is the first in a new Motorola product line, the 68300 family.

Peripheral devices mounted on the chip in addition to its 32-bit core boost overall system performance to more than 10 times that of conventional controllers, said Gary Daniels, general manager of Motorola's microcontroller division here.

"We're putting the power of a Macintosh II into a car," Daniels said. Most high-performance computers rely on a single central processing unit, but the 332 distributes processing power among several units.

Microprocessors are used in cars for such applications as engine and transmission control, traction management, anti-lock brakes, instrument panel displays, radios and tape players and on-board diagnostics.

Truck output sets record for April

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

U.S. truckmakers set an April record with assembly of 367,592 units. The total surpassed the previous April peak of 340,385 in 1988.

But despite the monthly high, truck output dipped 7.18 percent from the March total of 396,020.

Scheduled truck production of 89,585 last week dropped slightly (0.15 percent) from the prior week's 89,720 and slipped a bit (0.48 percent) from the year-ago week's 90,021.

Year-to-date, 1,615,080 trucks have been assembled, 6.47 percent more than the 1,516,864 completed last year at this point.

Carmakers built 637,187 units during April, 2.29 percent below the March assembly of 652,146 but 4.42 percent more than the year-ago month's 610,206.

Last week's targeted auto production of 155,258 was 4.70 percent below the previous week's 162,922 and was 3.33 percent below the year-ago week's 160,603.

So far this year, 2,698,491 cars have been built, 7.99 percent more than the 2,498,937 cars built last year at this point.

Companies split last week's scheduled output as follows:

General Motors, 47.09 percent; Ford Motor Co., 24.71 percent; Chrysler Motors, 14.04 percent; Honda of America Manufacturing, 4.99 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 2.89 percent; New United Motor Manufacturing Inc., 2.58 percent; Nissan Motor Manufacturing Corp. U.S.A., 1.49 percent; Toyota Motor Manufacturing U.S.A., 1.40 percent; and Diamond-Star Motors, 0.81 percent.

GM shut down its Reatta Craft Centre in Lansing, Mich., last week because of high inventory. The plant was expected to resume operations today.

April build tops 1988 in Canada

Canadian automakers produced 85,296 cars in April, a decline of 22.57 percent from the March build of 110,143 but an increase of 23.51 percent over the year-ago month's 69,050.

Last week's targeted car output of 21,205 rose 4.60 percent over the previous week's 20,272 but fell 20.66 percent below the year-ago week's 26,727.

So far this year, 358,159 cars have been assembled, 14.44 percent below the 418,596 completed last year at this time.

April's truck production of 82,509 was 5.57 percent below the March output of 87,379 but 2.58 percent more than the year-ago month's 80,437.

Truckmakers scheduled production of 21,137 units last week, slightly above (0.55 percent) the prior week's 21,022 and 3.82 percent more than the year-ago week's 20,359.

Year-to-date, 362,770 trucks have been built, 4.71 percent more than the 346,456 assembled last year at this point.

Imports vie for dealers

Asians may draw recruits from domestics as they expand in Midwest and Southeast

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Asian-based automakers are poised to add as many as 2,000 dealers in America's heartland by the end of 1992 to compete with the Big 3 in their strongest markets.

Many of those new dealers, mostly in the Midwest and Southeast, may come from the ranks of domestic [illegible] makers and will handle output from Japanese and K[illegible]th American transplants.

After years and billions of dollars o[illegible] in building U.S. and Canadian assembly plants and s[illegible]astructure, Asian manufacturers are turning their atten[illegible]heir distribution systems.

Through 1992, Asian makes are likely to add 1,600 dealers and capture an additional 6 percentage points of the U.S. car market, estimates Christopher Cedergren, senior analyst for J.D. Power and Associates of Agoura Hills, Calif.

"That's an incredibly large and rapid swing, but I think our figures are conservative," Cedergren said.

Publicly stated sales goals of the nine Japanese automakers in the United States and Hyundai Motor America are far higher. Long-term sales projections, often based on available production capacity, are traditionally optimistic, but Asian automakers are on the record as seeking more than 1.8 million additional car and truck sales by 1992.

And they are committed to adding more than 2,000 dealer franchises by 1992.

Much of the import dealership growth will come at the expense of domestic dealers, said Dennis Virag, vice president and managing director of Automotive Consulting Group, Toledo, Ohio.

"Some dealers are going to get tired of dealing with a domestic and see an opportunity to replace a domestic," Virag said.

McCurry says Toyota is not interested in megadealers for its new small-town points

He cited dealer unrest over General Motors' current dealer improvement program.

"GM needs to be careful they don't alienate their dealer body," he said. "Dealer bodies are going to be a strategic element in the auto industry of the 1990s. The companies with strong dealer bodies are going to have a significant strategic advantage."

Seeking domestic dealers in smaller markets in the Midwest and Southeast is a radical departure from import distribution strategies of the past in which the importers concentrated on large metropolitan markets and saturated both the East and West coasts.

Ford may kill carryover allowance

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. has told dealers it will not offer the usual 5 percent payment for 1989 vehicles left in inventory at the start of the 1990 model year if General Motors doesn't.

As a result, the Ford Dealer Council said it has warned the company that the automaker could lose sales momentum and market share if it drops the so-called carryover allowance this fall.

GM announced earlier this year that it planned to eliminate the 5 percent carryover allowance, but it did not say how it plans to help dealers clear out 1989 models once the new year begins.

Separately, Ford announced last week that it raised prices on certain options. The move echoed action taken recently by GM. Ford also lifted prices on four vehicle lines.

The carryover allowance has emerged as the No. 1 issue on dealers' minds, said Henry Hansel, chairman of the Ford Dealer Council.

In a letter to be sent to Ford dealers this week, the council will outline its opposition to eliminating or diluting the payout. Ford and its dealers will suffer if it is discontinued, the letter says.

In recent years, the carryover allowance was occasionally trimmed below 5 percent on some vehicles that carried incentives. But the payouts were less important because sales were strong and dealers had little fear of not being able to move inventory.

This year, industry car sales are off [illegible] percent and inventories are up. Although Ford sales are down less than 2 percent and car market share has risen above 23 percent, dealers say they are skittish about ordering new product. Uncertainty over the carryover allowance is making them even more hesitant as they head into the end-of-year buildout period.

On a $10,000 car, the carryover payment gives dealers $500 they can put toward advertising or other marketing efforts. Without that kind of assurance, dealers said, year-end orders become more of a risk.

For the most part, those orders must be submitted by mid-June. They are one of the factors that will help

Europe's new game: Pick '92 winners

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — As 1992 market unification edges closer, a growing sport in Europe is handicapping the winners and losers among the six volume makers.

The makers are Fiat S.p.A., Peugeot SA, Volkswagen AG, Renault, General Motors and Ford Motor Co. Each has long held more than 10 percent of the market, and each is battling fiercely for the lead.

While the battle has been between VW and Fiat, with Peugeot closing the gap, analysts feel the latter two may be supplanted by the two U.S.-owned competitors after Europe merges 12 middle-size nations into a single market of 323 million consumers.

That consensus favoring GM, Ford and VW is based mainly on their even distribution of production and sales across Europe. The thinking is that Fiat, Renault and Peugeot, which rely heavily on restricted national markets, may be more vulnerable.

Fiat Managing Director Cesare Romiti told the European Parliament recently, "It is reasonable to expect that this situation will change after 1992 and that the integration of the European market will give rise to a strenuous process of competitive selection."

Picking the winners and losers is not simple. Some analysts consider Fiat the most vulnerable. Fiat relies on the Italian market for nearly two-thirds of its European sales, and that market allows little competition from the Japanese.

But at the same time, Fiat is Europe's sales leader, has ample cash reserves and is considered to be the lowest-cost manufacturer in Europe and a world leader — Japanese included — in modernization of production facilities.

"If I would have to name the least vulnerable, I would say probably Fiat," said analyst Enrico Ponzone of Kleinwort-Benson in London. "In terms of

Acura to plug price gap with new mid-size model

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — American Honda's Acura Division plans to add a new model, positioned between its mid-priced Integra and its luxury-class Legend. It will arrive in the United States as early as next year.

The new car may carry a five-cylinder engine, originally thought to be slated for the next-generation Accord that will bow this fall. The new engine also is expected to appear in Accords sold outside the United States.

And, contrary to a statement by a top Honda official earlier this year, Acura's V-8 engine program is not dead, and the engine could appear in a new flagship model.

Referring to dealer expectations about a product between the Integra and a larger 1991 Legend, Tom Elliott, executive vice president of American Honda Motor Co., said, "I think we'll accommodate them."

The as-yet unnamed model will be positioned between Integra and Legend in both size and price, said Gerald Bengston, American Honda general sales man-

VW diesel hits U.S. showrooms; fuel price hikes cited

> **'There are more than 2.5 million people who own other brands (of diesels) and appreciate the simplicity, low cost of operation and the long cruising range.'**
> **— Bill Young**

By Jack Keebler
AUTOMOTIVE NEWS STAFF REPORTER

Volkswagen United States is back in the passenger-car diesel business it left in 1986.

Some dealerships already have four-door, diesel-powered Jettas on showroom floors, although VW will not say how many are in inventory or how many it expects to sell.

The cars are equipped with a refined 1.6-liter engine and a five-speed manual transmission and priced at $10,110. The gas-engined version sells for $9,910.

Sales of diesel-powered VWs in the United States peaked in 198 when 125,019 were sold. But by 1986, when VW decided to no longer sell a diesel model, sales had sagged to 14,630 units.

VW's experience tracked that of the domestic industry. In 1981, nearly 7 percent of the cars built in the United States were equipped with diesel engines, but the share had dropped to nearly nothing by 1987.

Bill Young, vice president in charge of VW United States, said the rise in the cost of crude oil and a 16 cent-per-gallon increase in gasoline in just the last two months stimulated renewed interest in fuel-efficient cars.

"In addition to a very loyal group of Volkswagen diesel owners who have been pleading for new VW diesels, there are more than 2.5 million people in this country who own other brands of diesel automobiles and appreciate the simplicity, low cost of operation and the long cruising range of diesel-powered cars," said Young.

Said VW U.S. Manager of Public Relations Jay Amestoy, "We have a lot of customers out there who have been well satisfied with their diesel car's performance, and now they're ready to trade in and replace with another diesel. So we want to satisfy those buyers looking for the diesel's long cruising range and low maintenance.

"This is a refined, cleaner, quieter-running engine that starts better at all temperatures" than did the old model, Amestoy said.

"Volkswagen spent lots of money developing the diesel. And there are even more sophisticated engines in development. Those more efficient and environmentally clean diesel engines could be introduced if the demand is there."

GM small-car plans ride on one platform

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

LANSING, Mich. — General Motors has hedged its small-car bets for the 1990s, backing up its showcase Saturn project with strategic shifts in existing car lines.

While GM's highly touted Saturn Corp. will use a clean-sheet-of-paper approach to produce a small car in the United States for the 1990 model year, other GM operations have quietly plotted their small-car strategy to battle the imports well into the 1990s.

The Lansing automotive division of the Buick-Oldsmobile-Cadillac Group plans to tighten production capacity so that demand exceeds capacity, focus each plant on a single product family and simplify products by eliminating models and sharing components, including body platforms, across the small-car line.

The object of the multi-pronged approach is to make GM's domestic small cars competitive in cost and quality with competitors — particularly imports — well into the 1990s.

The B-O-C Lansing automotive division is responsible for the engineering and manufacturing of about one million J-cars and N-cars annually.

The division has simplified its small-car lineup with the elimination of the Oldsmobile Firenza and Cadillac Cimarron J-cars. The Buick Skyhawk J-car will be discontinued after the 1989 model year.

In the 1990s, GM's small-car line will be further simplified by use of the same L-body platform — now exclusive to the Chevrolet Corsica and Beretta — for all domestic small cars except Saturn.

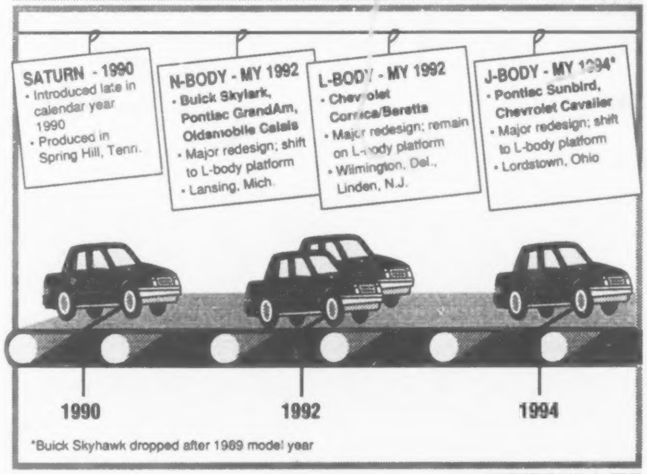
In 1992, the N-cars will undergo a major redesign and will be shifted to the L-body platform. The N-cars are the Buick Skylark, Oldsmobile Cutlass Calais and Pontiac Grand Am. Two years later, the J-body Chevrolet Cavalier and Pontiac Sunbird will be redesigned and also will move to the L-body.

The shift to a single platform saves money by driving complexity out of vehicle assembly and the component-making business.

For example, GM's Delco Moraine Division is developing an anti-lock brake system — less costly than those currently available — that likely will become standard in small cars. Delco Moraine can then develop one system instead of several.

Donald Hackworth, Lansing automotive division product manager, argues that sharing components is not a return to GM's days of look-alike cars. Different sheet metal, interiors, powertrains and suspensions will make each line distinct. Shared components will be those that are not noticeable to the customer.

GM's small-car product plans



*Buick Skyhawk dropped after 1989 model year

AUTOMOTIVE NEWS / C. BEEVER

GM's Saturn project is not the automaker's only small-car strategy. As the chart above shows, existing GM car divisions have a timetable for small-car consolidation on the L-body platform. Donald Hackworth, Lansing division product manager, right, said the move will enhance production flexibility.

Shared componentry also permits assembly flexibility. Production can be shifted among assembly plants producing models with shared components. If one model outsells its capacity, production can be added at a plant assembling another model with the same components.

Hackworth said reducing fixed overhead in the intensely competitive small-car segment is crucial.

"If we're going to succeed in this end of the marketplace, we want demand to lead capacity and not

see HACKWORTH, page 46

Dallas dealer files Chap. 11

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Forest Lane Porsche-Audi-Alfa Romeo in Dallas, one of the largest Porsche and Alfa Romeo dealerships in the country, has voluntarily filed for bankruptcy under Chapter 11 of the U.S. Bankruptcy Code.

Scot Sauder, attorney for Forest Lane, blamed the dealership's financial woes on both the five-year decline in the Dallas-area economy, which substantially reduced demand for high-end European luxury and sports cars, and negative national publicity for the Audi brand.

Last week, a Dallas bankruptcy judged allowed Forest Lane to continue to operate its sales and service facility, and he set up a payment system for one of its largest creditors, Transamerica Commercial Finance.

Other lenders are lining up at Forest Lane's doorstep. The dealership has not filed its bankruptcy schedules, but, Sauder said the store has assets in excess of $8 million and liabilities of $6 million to $7 million.

In February, the dealership's financial troubles led Deposit Insurance Bridge Bank, formerly MBank Dallas, to post the dealership's property for foreclosure. The property includes the dealership's two-year-old, 30,000-square-foot building that features a showroom with a black granite floor.

In its bankruptcy petition, Forest Lane said that in the summer of 1988, it could not meet the terms of a $1.9 million loan with Transamerica, which was financing the dealership's new-car and parts inventories.

Under the loan agreement, the dealership was to hold money generated from new-car sales in trust for Transamerica. Transamerica later sued Forest Lane in Harris County (Texas) District Court to collect all the money due.

In October 1988, Transamerica agreed to continue to fund the revolving loan if the dealership would pay Transamerica $30,000 a month for cars out of trust.

The dealership failed to make the required $30,000 payment in February and to pay the $300,000 out-of-trust balance due March 31.

In an agreement set down by the bankruptcy judge last week, Forest Lane is allowed to deposit 92 percent of the funds from the dealership's new-car sales in an account for which the dealer and Transamerica are both signatories.

Once every 30 days, Transamerica is allowed to take out one-third of the money on deposit. The

Found: Liz, Jerry, Katheryn, but not Dale

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF WRITER

Found: Geraldine Elizabeth Carmichael.

For those whose memories may have dimmed, Liz Carmichael bilked thousands of people out of roughly $3 million in 1974 when she introduced a gasoline miser dubbed the "Dale."

The three-wheel vehicle promised a nation thirsting for gasoline 70 mpg at high speeds.

It was a hoax. In 1977 she was convicted of 29 counts of grand theft, three counts of corporate security fraud and one count of conspiracy in Los Angeles, where her company, 20th Century Motor Car Corp., was headquartered.

She was sentenced to two consecutive terms of one-to-10 years each and fined $30,000 for securities fraud. While out on bond awaiting appeal of her conviction, she disappeared.

But the most startling revelation about the towering, almost burly Carmichael — learned just prior to the start of the trial — was that she was really a he named Jerry Dean Michael.

He dressed as a woman during the entire promotion of the Dale and subsequent trial, and claimed to have had hormone shots that made him a woman.

Moreover, it was learned before the trial, that federal authorities had charged him with counterfeiting in 1961. He had jumped bail then and was a fugitive until surfacing 13 years later as Liz Carmichael.

For nearly a decade Michael again evaded police, but on April 5 of this year, an NBC television program called "Unsolved Mysteries," aired an episode about the swindle and Michael's disappearance. It also asked if anyone knew his whereabouts.

Program producers pointed out

EUROPE'S BOOM

DRI now says '89 sales will match '88

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — European new-car sales — once expected to drop in 1989 — will match last year's record, according to an updated forecast by Data Resources Inc.-Europe.

But DRI-Europe projected a 2.5 percent decline for 1990 at its World Auto Outlook Conference last week.

The upward revision follows stronger than expected first-quarter sales.

Other revised forecasts have led to a consensus among analysts that Fiat will almost certainly win the 1989 European sales race. DRI-Europe last week declared Fiat the winner of the closely contested 1988 race — which most industry estimates have given to VW by the narrowest of margins.

The London-based research group is now projecting European passenger-car registrations of 12.9 million for 1989. Last fall, DRI-Europe had forecast that registrations would shrink 5 to 6 percent for the year to about 12 million units.

DRI-Europe and most industry analysts forecast a decline in the second half. But the first quarter was strong, leading many to believe the full calendar year could match last year's record.

Sales in Western Europe last year totaled 12.91 million units, the fourth successive year of substantial growth since a 2.4 percent dip in 1984.

Through the first quarter, sales were up 6 percent. But March sales were down 0.6 percent, as sales fell in 10 of 16 countries.

"We still expect demand to fall in the second half of the year, but because of the strong growth already achieved, we forecast a flat market for the year as a whole," states the DRI-Europe report.

The firm expects the decline to continue into 1990 when it expects sales to fall 2.5 percent to 12.59 million units.

With interest rates on the rise, DRI said that it is becoming more difficult for manufacturers to maintain low and interest-free financing, further impacting registration totals.

DRI gave the 1988 sales race crown to Fiat, which includes Alfa Romeo and Lancia, on the basis of having adjusted its figures from the Spanish market to reflect sales instead of registrations. The research firm said the change results in Fiat edging out Volkswagen, which includes Audi and Seat, by only 7,000 units. VW, which claims to have led Europe in 1988 sales, has been the top make since 1985.

"For 1989 we expect the gap between the two market leaders to widen considerably in favor of Fiat," said DRI-Europe. "This is partly because we expect the Italian market to remain strong this year while the West German market falls by 2 percent."

DRI also said that Fiat's 15-month-old Tipo subcompact will have increased availability in export markets this year and should take some sales from VW's Golf.

Other analysts also point out that Fiat has traditionally achieved its best sales in the first half of the year, while VW comes on strong in the second half. Fiat held a wide lead in Europe during most of 1988. A weak second-half market throughout Europe would presumably blunt VW's chances of staging another late surge.

Dodge Spirit gets bad crash mark

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The 1989 Spirit, the car replacing Aries in the Dodge lineup, fared poorly in a vehicle crash that was 5 mph faster than required by NHTSA.

Performing better in the 35-mph crashes were the 1989 Dodge Daytona, Honda Civic CRX and Ford Thunderbird. The results were part of NHTSA's New Car Assessment Program.

While a 35-mph crash generates a third more force than the 30-mph limit required, the Spirit registered a driver head-injury criterion rating of 1421, compared to the 1000 HIC level that is considered the limit for survival in the 30-mph crash. The Spirit's passenger-side HIC was 537.

Chrysler dismissed the crash results, saying its vehicles meet or exceed the 30-mph standards.

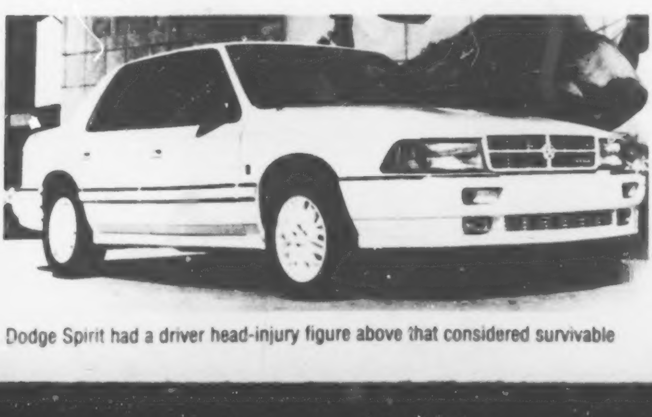
"The 35-mph barrier tests indicate nothing about vehicle performance in most accidents nor do they relate to federal standards," a spokesman said.

The Dodge Daytona had a driver HIC level of 399, passenger HIC, 297; Honda Civic CRX, driver HIC, 750, passenger HIC, 520; and Ford Thunderbird, driver HIC, 541, passenger HIC, 496. The Daytona and Thunderbird were equipped with passive restraints.

The Spirit fared better in chest-deceleration, scoring 47 G's for the driver and 45 for the passenger. In a 30-mph crash, NHTSA considers a chest-deceleration number below 60 to be survivable.

The Civic CRX tallied 39 G's for the driver, 37 passenger; Daytona, 39 driver, 32 passenger; and Thunderbird, 44 driver, 40 passenger.

Previously crashed 1989 cars include the Mitsubishi Mirage and Galant and Eagle Medallion, all of which passed the 30-mph criteria at the higher speed.



Dodge Spirit had a driver head-injury figure above that considered survivable

Days' supply of cars dips, but stocks remain swollen

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

The current round of retail incentives reduced the days' supply of unsold vehicles in April, but the May 1 figure remained higher than that of a year ago.

The month-to-month dips were not overpowering in most instances. That could mean additional retail incentives, a spate of dealer incentives or production cuts if early-May sales reports due this week do not show an acceleration in the sales pace.

Domestic new-car stocks equaled a 69-day supply on May 1 compared with a 77-day supply on April 1 and a 63-day supply on May 1, 1988, at then-current sales rates.

Although retail incentives increased the daily selling rate, the total inventory of unsold domestic cars rose slightly to 1,835,840 on May 1 from 1,822,224 on April 1. The May 1 total was the highest since the record of 1,900,096 unsold cars on July 1, 1987.

David Healy, auto analyst for Drexel Burnham Lambert, called May 1 inventories "uncomfortably-high, but not a disaster."

He said that based on present conditions, the days' supply for the Big 3 will remain high, which will probably mean continued heavy incentives and could mean production cuts later in the year.

Unsold stocks of imported cars declined to a 72-day supply on May 1 from a 79-day supply on April 1. The May 1, 1988, inventory equaled a 63-day supply. There were 698,896 imported cars on hand May 1, down from 713,783 on April 1.

The May 1 supply of imported trucks rose to a 76-day supply from a 73-day supply on April 1. On May 1, 1988, there was an 84-day supply.

The days' supply of unsold imported cars and trucks declined to 73 days on May 1 from 77 days a month earlier. One year ago, there was a 75-day supply of unsold imported vehicles.

Among the Big 3, Chrysler Motors — which is offering zero-percent financing on short-term loans to low-risk buyers — reduced its days' supply of cars by the widest margin from April to May.

Chrysler's inventory on May 1 equaled a 69-day supply, down from an 80-day supply April 1, but slightly higher than the 65-day supply on May 1, 1988.

Ford Motor Co. reduced its supply to 71 days on May 1 from 81 days on April 1. On May 1, 1988, Ford had a 64-day supply.

General Motors' stocks declined from an 83-day supply on April 1 to a 75-day supply on May 1. A year ago, GM had a 67-day supply.

By market segments for domestic cars, subcompacts were in the tightest supply with a 53 day supply on May 1.

Domestic specialty cars, with a 104-day supply, were the most overstocked.

Importers of Japanese cars reduced their days' supply the most in April. Their May 1 inventory equaled a 65-day supply, compared with a 73-day supply on April 1 and a 69-day supply on May 1, 1988.

Honda reduced its import stockpile from 40 days on April 1 to 27 days on May 1. Toyota's import inventory fell from 28 days on April 1 to 18 on May 1.

The stock of unsold Nissan imported cars rose to 106 days on May 1 from 88 days a month earlier.

Isuzu stocks remained high at 169 days. On May 1, Mitsubishi had a 101-day supply of imported cars, up from 71 days on April 1, and Suzuki had a 240-day supply of cars, down from 253 days on April 1.

Days' supplies were also far above average for Japanese cars imported for Chevrolet (114 days) and Chrysler Motors (138).

Inventory levels remained fairly stable for West German makes. On May 1, the days' supply of was 94, compared to 98 on April 1 and 85 on May 1, 1988.

At the beginning of the month, Audi stocks — the highest among the German makes — represented a 234-day supply, up from a 182-day supply on April 1, despite incentive programs including extended warranties and guaranteed resale value. Porsche's level was next-highest, at 132 days, but it was down from 170 days a month earlier. Volkswagen stocks declined during the month, to a 103-day supply.

Other importers had varying degrees of success in reducing inventories.

Sterling had a 139-day supply as of May 1, compared to 124 days a month earlier, despite its low-interest financing program and a new ad campaign.

Yugo America reduced its days' supply to 197 on May 1 from 242 on April 1. The company recently began offering dealer incentives in an effort to re-start sales following its January bankruptcy filing.

Truck sales rise in April; year is down

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Heavy incentive activity pushed light-truck sales to a marginal increase in April, as domestic manufacturers continued to boost their market share.

Total retail deliveries of 418,417 light trucks in April were up 2.90 percent from last year's 406,614.

The April gain partially offset a decline in sales during the first quarter of this year.

Four-month sales of 1,546,492 light-duty trucks were down 4.56 percent from 1,620,333 last year.

In April, Detroit's Big 3 garnered 87.56 percent of the market up nearly 2 percentage points from 85.71 percent last year.

In the first four months of the year, Detroit's market share increased to 86.48 percent from 85.54 percent last year.

GMC was the only U.S.-based manufacturer that posted sales gains for both the month and the first four months of calendar 1989.

Ford, Chevrolet and Jeep all had moderate gains in April, but were down in the year-to-date column.

The Plymouth-Dodge total was off both in April and for the first four months.

Ford's reported light-truck sales total for the first four months included more than 9,000 Class 4 Super Duty models, which some truck industry officials do not include in the light-truck count. Ford is now selling well over 2,000 medium-duty Super Duty models a month, but continues to count them as part of its light-truck total.

Among the imports, Isuzu and Range Rover bucked the overall trend by posting strong gains for January and for the first four months of the year.

Suzuki had the sharpest monthly and year-to-date reversals.

Ford demonstrates engine durability
Ford New Holland technicians Tom Cline, center, and Terry Cuthbertson tear down a 6.6-liter Ford diesel engine from a Cargo CF-7000 truck owned by Harry Kuck, right. The exercise, at the New England Truck Show in Boston, was to demonstrate the engine's durability. Kuck logged 318,350 miles with the engine, which he said has never been overhauled. Kuck is an owner-operator based in Chicago.

Utilimaster's Aeromate takes off

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

ORLANDO, Fla. — Utilimaster Motor Corp.'s strategy of producing delivery vans on its own chassis and selling them through a variety of dealers has been paying off.

B. Ross Dubec, general sales manager of the Wakarusa, Ind., company, said 70 dealers have been signed to handle its downsized special-delivery vehicle, known as Aeromate. Most are auto dealers selling Chrysler, Ford, Chevrolet, Nissan and other makes. Utilimaster hopes to have 140 dealers by the end of this year.

"That should give us all the dealers we need, without having too many," Dubec said during the American Truck Dealers convention here.

Aeromate uses drivetrains and other mechanicals — such as wiring harnesses — supplied by Chrysler's Acustar Division.

The vehicle is designed to fill the market gap between Detroit's smaller conventional cargo vans and the high-cube vans that Detroit makers and other body builders produce. The model is being purchased by florists, dry cleaners and caterers and also is being used in "applications we never considered," Dubec said.

Funeral homes engaged in multiple-body pickups, the result of plane crashes or other disasters, have purchased the vehicle. So have paraplegics, who bought it for personal use. One entrepreneur purchased the vehicle for a pet grooming service in which she goes house-to-house, clipping and washing dogs. The rear box is all aluminum, which means it will not rust.

Dubec said sales acceptance has been good. The company began shipping vehicles last September. It expects to sell 2,000 this year and 4,000 in 1990, Dubec said.

The vehicle also is being tested for fleet use by United Parcel Service and Federal Express.

The company generally doesn't sell directly to fleets. The exceptions were two national accounts, which required unique versions of the vehicle.

Utilimaster has been producing walk-in vans for 15 years. It also sells a walk-in van with a 14-foot box, built on General Motors and Ford Motor Co. chassis.

Aeromate is different from previous Utilimaster models in that it uses the company's own chassis, placing the firm in direct competition with Detroit's manufacturers for the first time.

Chassis production "gives us better control" over the vehicle's distribution, Dubec said. "We can franchise whomever we want."

The suggested retail price of the downsized special-delivery van, depending on options, is about $17,500. Automatic transmission, power steering, power brakes, tinted windshield, tilt steering and various other items are standard.

Paccar profits

BELLEVUE, Wash. — Paccar had its fifth straight record quarterly profit for the three months ended March 31. Net income of $47.3 million for the period was up from $39.9 million in like 1988.

Charles M. Pigott, Paccar chairman, said demand for the company's Kenworth, Peterbilt and Foden trucks kept truck order backlogs high and plants operating at near capacity. Pigott said sales and profits of foreign truck operations in Canada, Australia and the United Kingdom also improved.

TRUCK BRIEFS

Swift expands fleet

PHOENIX, Ariz. — Swift Transportation Co., one of the largest private trucking firms, announced a $42.5 million expansion program, including the addition of 1,050 trucks and trailers.

The expansion will be financed through long-term borrowing agreements with several lenders, such as banks, insurance companies and the finance units of equipment manufacturers.

The company will spend $32 million for equipment and $8 million to expand offices and terminals in Phoenix; Stockton, Calif.; Renton, Wash.; and Lindon, Utah. It will spend $2.5 million to build a terminal near Los Angeles.

It will add 350 tractors, 700 trailers and 450 drivers to its fleet. For the balance of calendar 1989 and for 1990, it will buy mostly Kenworth, Peterbilt and Navistar International trucks.

The company is expanding two college-based driver training programs to meet its driver needs.

Swift's revenue has increased about 300 percent in the past several years and totaled $85 million in 1988. The company expects to reach $120 million this year.

It operates in 48 states with 1,000 trucks, 1,800 trailers and 1,500 employees.

Allied-Cantire deal

ETOBICOKE, Ontario — Allied-Signal Automotive acquired certain disc brake and drum brake friction material assets from the Cantire Products Division of Canadian Tire Corp.

The acquisition includes the production operations in a 39,000-square-foot leased facility that supplies disc brake pads for cars and light trucks in the North American aftermarket.

The remanufacturing equipment and inventory will be relocated to Allied-Signal Canada's Certified Brake Division plant in Toronto.

Schwitzer restructures

PROSPECT HEIGHTS, Ill. — Schwitzer, a major manufacturer of heavy-duty truck and engine components, formed Schwitzer Inc., a new publicly held company.

Schwitzer formerly was a division of Household Manufacturing here.

It was spun off when the latter firm decided to restructure and has become a holding company for four subsidiaries: Schwitzer U.S. of Indianapolis; Schwitzer (Europe) of Bradford, England; Schwitzer Manufacturing Canada of Stratford, Ontario; and Lacom Schwitzer Equipamentos of Campinas, Brazil.

Navistar problems

CHICAGO — Navistar International Corp. expects profits to be significantly less than projected this year due to far greater than expected start-up costs related to the introduction of new products.

Deutsche Bank Capital Corp. of New York quoted management as saying costs of new lines of medium and heavy-duty trucks will be $60 million to $65 million more than anticipated.

The vehicles went into production earlier this year at Navistar's Springfield, Ohio, plant, which accounts for 60 percent of Navistar's dollar sales, according to Deutsche Bank.

Difficulties began to surface in mid-February and became more serious by mid-March. The problems, not caught in initial runs, were complicated later by more complex special-order vehicles and a just-in-time inventory system.

For example, a supplier was shipping hoods for two series of vehicles, upper Class 7 and lower Class 8 trucks, that didn't fit, Deutsche Bank said.

The vehicles accounted for about 10 percent of the production schedules and they had to be produced without hoods and pulled from the assembly line until the proper hoods could be obtained from the suppler. Navistar's paint plant is also not yet running as desired.

Navistar said such start-up problems are not uncommon in the industry. They have resulted in canceled orders and will reduce Navistar's sales. The biggest difficulties appear to be in Navistar heavy-truck production. Medium-duty production is running close to target, Deutsche Bank said.

Auto spending in newspapers climbs to record $687 million

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

U.S. automakers, dealers and importers spent a record amount on newspaper advertising for cars in calendar 1988.

The Newspaper Advertising Bureau said the auto industry, including factories, dealer associations and dealers, spent $687.8 million in 1988, up 5.3 percent from $652.9 million in 1987, the previous peak. The increase slightly outpaced the 4.1 percent rate of inflation.

The spending numbers, projected for 125 markets, are collected by Media Records. The numbers do not include national newspapers such as The Wall Street Journal or USA Today.

William J. Tausch, vice president of automotive marketing for the Newspaper Advertising Bureau, said the record 1988 expenditures were buoyed by strong increases in dealer association spending.

T.V. ad spending up, see Page 20

Dealer association expenditures on newspaper advertising showed the largest increase in 1988. Dealer advertising groups spent $87.7 million, up 42.4 percent over the $61.6 million spent in 1987. Tausch attributed the rise to an increase in he number of dealer groups and a flurry of incentives advertised by the groups.

General Motors' dealer groups increased their newspaper spending 84 percent in 1988. They spent $22.9 million, compared to $12.4 million in 1987. GM executives have said they have made an effort to be more competitive in local advertising spending. Among GM makes, Pontiac dealer groups showed the largest increase in 1988 with a 286.2 percent rise in newspaper spending.

A bureau spokesman said GM spending on newspapers was generally low in 1987 and the corporation has made a concerted effort to beef up local advertising outlays since then.

Factory expenditures on newspaper advertising fell 14.6 percent in 1988 compared to 1987. Factories spent $175.2 million in 1988 compared to $205.1 million in 1987. Factory expenditures by domestic automakers fell 11 percent ($97 million vs. $109 million) while factory spending by importers took an even bigger drop by falling 18.6 percent ($78.3 million vs. $96.2 million).

"The factories are rationalizing their roles with the dealer associations, factories are developing the brand character and dealer associations are taking on more of the retail messages (including advertising factory incentive programs)," Tausch said.

He added that one of the reasons for the decline in factory spending in newspapers may have been the large financial commitments the Big 3 domestic automakers made to advertising time during telecasts of the Olympic Games. Chrysler Motors and Ford Motor Co. purchased television time during the Winter Olympic Games, while GM was the only domestic automaker advertising during the airing of the Summer Olympic Games.

Chrysler Motors' factory spending on newspaper advertising showed the sharpest decline among the domestic automakers. Chrysler spent $10.1 million in newspaper advertising for its Chrysler-Plymouth, Dodge and Jeep-Eagle divisions and corporate campaigns, a 65.2 percent drop from the $29.1 million spent in 1987.

"We spend the bulk of our

Makers top $1 billion in network TV

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

In 1988, for the first time ever, automakers spent more than $1 billion in network television for cars and trucks. The auto industry also spent more than $1 billion in spot television for the second consecutive year.

It was a television year for the automakers with many manufacturers sponsoring network advertising during broadcasts of both the summer and winter Olympic Games and the elections.

Manufacturers and dealer associations also poured money into local spot television as regional marketing efforts increased. Many advertisers, particularly General Motors' divisions, had large increases in overall advertising budgets for the 1989 model year, much of which went into television.

Overall, factories and dealers spent $2.5 billion in television advertising for cars and trucks including both network and spot ads, up 19 percent from $2.1 billion in 1987. The large increase was fueled by a 44.25 percent increase by GM whose overall television budget jumped from $499.9 million in 1987 to $721.1 million in 1988.

Network purchases, which included all factory dollars with the exception of one network cam-

NOTES: Expenditures for television commercials advertising two nameplates or vehicle types have been divided between the two brands. Expenditures include leasing.

Broadcast Advertisers Reports identifies some automotive television expenditures as "autos and trucks," "various autos," "general promotion," etc. Unless they are clearly attributable to a brand, they are not included in the above, or in the truck data following, but are included in the company totals. In the January/June 1988 period, these expenditures were as follows: Chrysler Corp. $25,544,300; Ford Motor Co. $13,702,700; General Motors $1,762,100; Nissan $1,387,000; Toyota $1,614,500.

FROM PAGE 20

paign sponsored by Jeep-Eagle dealers, totaled $1.2 billion in 1988, up 28.62 percent from $933 million in 1987. Ford Motor Co. and Chrysler Motors sponsored advertising on telecasts of the Winter Olympics in February 1988, while GM, American Isuzu and Hyundai were the automotive sponsors of the Summer Olympics in September 1988.

Ford also sponsored all automotive advertising during the 18-hour World War II miniseries "War and Rememberance," and Chrysler continued to sponsor its "Chrysler Showcase Theatre."

The market-by-market — or spot television — category continued to explode in 1988 due to the rising interest in regional marketing by automakers and dealer associations.

Competition was intense at the local level, and manufacturers took a variety of approaches to improve the leverage of co-op programs. Some manufacturers reorganized dealer groups, others started co-op programs with their dealer associations and several makers encouraged or mandated higher per-car contributions by dealers.

"The rising expenditures on spot television are an indication of what's to come; the competition is so strong, manufacturers are relying more and more on dealer associations to move the product," said Richard A. O'Donnell, vice president of automotive marketing, Television Advertising Bureau.

For example, Chevrolet enacted a new one percent marketing charge on the dealer invoice price of all of its 1989 cars and trucks, except fleet and GM employee purchases. The charge is mandatory for all dealers — regardless of membership in a dealer association — and has generated "hundreds of millions" of local advertising dollars for the division, according to Robert Burger, who retired April 28 as Chevrolet general manager.

In spot television, GM and its dealers were far and away the largest purchasers with $316.9 million spent on market-by-market advertising in 1988, up 21.19 percent from $261.5 million in 1987. Ford Motor Co. and its dealers were the second largest purchasers of spot television with $169.4 million in 1988, up 18.13 percent from $143.4 million in 1987.

Chrysler's spot television budget, which ranked third in 1988, jumped dramatically. Chrysler Motors and its dealers spent $147.7 million on spot television in 1988, up 29.68 percent from $113.9 million in 1987.

In network television, GM also was the leading automotive purchaser. GM spent $404.2 million on network television in 1988, up 69.55 percent from $238.4 million in 1987.

Pontiac's network television expenditures jumped 82.17 percent in 1988 to $80.7 million from $44.3 million in 1987. Pontiac introduced its 1988 Grand Prix in January 1988 with an advertising campaign based on its 1988 Motor Trend Car of the Year award.

money in television followed by magazines and newspapers; we generally spend money in newspapers when our dealers co-op with us," said a Chrysler spokesman.

Ford Motor Co. registered a 24.7 percent drop in its factory expenditures on newspaper advertising for its Ford and Lincoln-Mercury divisions and corporate campaigns.

GM, buoyed by what Tausch called a "new product flurry," was the only domestic automaker to increase its factory newspaper advertising expenditures in 1988. GM spent $73.8 million on newspaper advertising in 1988, up 18.1 percent from $62.5 million in 1987. Newspaper expenditures include car advertising for its five car divisions and corporate advertising.

In light-truck advertising, makers spent $21.5 million in newspapers in 1988, down 48.2 percent from $41.5 million spent in 1987.

PERSONNEL

FROM PAGE 31

manager for COIN Financial Systems' automotive division in Atlanta.

White joined COIN in 1984.

Cooper Tire

Roderick F. Millhof has joined Cooper Tire & Rubber Co's. industrial products division in Auburn, Ind., as vice president of sales and marketing. He had been vice president of sales and marketing for Johnson Rubber Duramax in Middlefield, Ohio.

Creative Universal

Larry G. Short, president of Creative Universal, a training and publications service in Warren, Mich., has retired after 33 years of service with the firm and its parent company, Creative Industries Group.

Bernie Masztakowski succeeds Short. He has been with the firm since the parent company formed the Creative Universal subsidiary in 1970.

W.B. Doner

The automotive division of W.B. Doner & Co. in Detroit has promoted **Stacey Dobrusin** to account executive. She will work on the Gateway Pontiac, Performance Pontiac and Southern California Pontiac Dealer Association accounts.

Dobrusin had been an assistant account executive on the New England Ford Dealer Association account.

Eaton

The axle and brake division of Eaton Corp., Galesburg, Mich., has named **Paul P. Pipik** manager of service parts sales. He had been an account manager serving original-equipment manufacturers. Pipik joined Eaton in 1977.

Ferco Fabricators

Don M. Schlueter has been appointed president and chief operating officer for Ferco Fabricators in Moberly, Mo. He replaces **Mike Bowlby**, executive vice president, who has left the company.

Schlueter has been president of Eclipse Industrial Products, a manufacturer of industrial cutting tools with offices in St. Louis and plants in Michigan and Arkansas.

JPI

John R. Washbish has been promoted to vice president of sales and marketing for JPI Transportation Products in Ann Arbor, Mich. He was director of sales for the J.P. Industries unit.

GE Capital Auto Auctions

GE Capital Auto Auctions has named **Joseph D. Lyng** vice president and adviser to the president. The company is based in Barrington, Ill.

GE also promoted **Gregory J. Kobel** to general manager of the Greater Chicago Auto Auction. He replaces Lyng.

Lear Siegler Seating

Lear Siegler Seating Corp., Southfield, Mich., has appointed **Charles E. Fisher** vice president of purchasing.

Fisher joined the company in 1985 and has served as sales manager and director of purchasing.

Lintas:Campbell-Ewald

Lintas:Campbell-Ewald in Warren, Mich., has named three senior vice presidents.

They are **Joseph W. Tuskiewicz**, group account supervisor on the Chevrolet area marketing account; **Michael L. Tuite**, supervisor on the General Motors Acceptance Corp. account; and **Jeffrey Seregny**, in charge of general accounts.

Tuskiewicz was East Central area account supervisor on the Chevrolet account; Tuite managed the Rockwell International account; and Seregny has held supervisory posts on AC-Delco and other accounts.

Nylok Fastener

Anthony E. DiMaio has been appointed vice president of engineering for Nylok Fastener Corp. in Rochester, Mich.

He had been vice president of manufacturing for Marson Fastener Corp.

Ohio Rubber

Richard L. Williams has been appointed executive vice president of Ohio Rubber in Willoughby, Ohio. He had been vice president of sales. Williams will continue to supervise sales and marketing activities.

Phillips Plastics

John C. Newhouse has been appointed vice president of corporate marketing for Phillips Plastics Corp. in Prescott, Wis. He was with Ault Inc. as vice president of marketing and sales.

Varity buys Fruehauf, gets Kelsey

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Toronto-based Varity Corp. reached an agreement to purchase the remainder of Fruehauf Corp. — essentially its Kelsey-Hayes operations — creating a powerhouse supplier in the automotive wheel and brake market.

The two signed a definitive agreement under which Varity will acquire Fruehauf for about $650 million in cash, notes and stock.

Varity had sales of $2.285 billion and net earnings of $81.7 million for the fiscal year ended Jan 31. Fruehauf's Kelsey-Hayes operations reported 1988 sales of $1.11 billion and pre-tax earnings of $60 million.

Fruehauf has already sold its trailer and maritime operations to Terex Corp. of Green Bay, Wis., for $232.5 million in cash and assumption of debt.

Kelsey-Hayes' wheels, wheel-end components and anti-lock braking systems for cars and trucks are expected to mesh well with products of Varity's Dayton Walther Corp., based in Dayton, Ohio, according to Anthony Viscogliosi, analyst with Roney & Co. in Detroit.

Dayton Walther produces truck and auto wheels plus brake assemblies and components and operates 11 plants in the United States, two in Canada and one in the United Kingdom. Kelsey-Hayes, based in Romulus, Mich., operates 17 factories in North America and five in Europe.

Varity also has a components group that produces Perkins diesel engines and parts for trucks. Its third group is Massey-Ferguson, maker of farm equipment.

Varity Chairman Victor Rice said the acquisition will reduce his company's reliance on farm machinery sales to less than 35 percent of gross revenue.

The company has about $800 million in tax-loss credits in several countries, including about $500 million in the United States.

Directors of both companies have approved the transaction and recommended its adoption by shareholders. Holders of at least 80 percent of Fruehauf Class A and B shares must approve the deal if it is to become a reality.

Under the agreement, Varity will pay $66 million in cash, $430 million in new notes or debt guaranteed by Varity plus 55.5 million shares of newly issued Varity common stock. In addition, Varity will issue another 2.5 million common shares to pay expenses associated with the deal. The exact value of the package will depend on the market price of Varity stock.

While Kelsey will mesh well with Varity's automotive supply operations, its purchase will saddle Varity with additional debt.

Varity had $258 million of long-term debt in U.S. dollars for its fiscal 1989 year ended Jan. 31. Adjusted for U.S. accounting principles, the debt was $369 million. Its equity was $509 million, creating a very poor 72.4 percent debt-to-equity ratio, Viscogliosi said.

Honda Civic, aerodynamically
Here are two looks at the aero package for the 1989 Honda Civic four-door sold by Pacific Auto Accessories, Huntington Beach, Calif. The package comes with front air dam, side and rear skirts and rear spoiler.

Japanese firms make parts in 227 U.S. plants

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Foreign parts manufacturers now operate in 33 states and have created 142,000 new jobs in the United States, according to a survey conducted by an automotive parts newsletter.

The Japanese have the most auto parts manufacturers here, with 227 production facilities. The Germans are a distant second with 101 plants, trailed by the British, who operate 37 facilities in the United States.

The study was conducted by Automotive Parts International, based in Washington.

Eighty-six of the foreign parts plants are located in Michigan, where they employ 18,000 workers. Ohio is second with 72 facilities, providing more than 12,000 jobs, followed by Indiana with 47 facilities, employing 9,000. Eleven states have more than 10 foreign-owned parts plants.

Nearly half of the plants have been built since 1984, following the establishment of Japanese transplants, the survey said.

More than two-thirds of all foreign-owned parts suppliers listed the Big 3 as customers.

Of the domestic manufacturers, Ford Motor Co. was listed as a customer by 169 foreign-owned parts manufacturers. General Motors was named by 134 suppliers, followed with Chrysler Corp., named by 133 parts makers.

In contrast, 90 parts manufacturers said they supplied Honda in Marysville, Ohio; 69 listed Nissan in Smyrna, Tenn.; 56 listed Mazda in Flat Rock, Mich.; and 41 named Toyota in Georgetown, Ky.

Car output jumps 4% to 159,466

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

Last week's targeted domestic auto production of 159,466 increased 4.18 percent over the previous week's 153,062 but dipped 4.89 percent from the year-ago week's 167,669.

So far this year, 2,855,761 cars have been assembled, 7.10 percent more than the 2,666,425 completed last year at this point.

Companies split last week's scheduled output as follows:

General Motors, 48.90 percent; Ford Motor Co., 23.97 percent; Chrysler Motors, 13.23 percent; Honda of America Manufacturing, 4.86 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 2.79 percent; New United Motor Manufacturing Inc. 2.51 percent; Nissan Motor Manufacturing Co. U.S.A., 1.55 percent; Toyota Motor Manufacturing U.S.A., 1.40 percent; and Diamond-Star Motors, 0.79 percent.

Truck production was estimated at 85,235 units last week, 6.17 percent below the prior week's 90,836 and slightly below (0.54 percent) the year-ago week's 85,696.

Year-to-date, 1,701,566 trucks have been assembled, 6.21 percent more than the 1,602,027 units built last year at this point.

The Cadillac Allante line at GM's Detroit-Hamtramck plant is idle this week because of high inventories in the field. Production is slated to resume May 22.

GM's Wentzville, Mo., plant and its Reatta Craft Centre in Lansing, Mich., resumed operations last week. Both had been idle because of high inventories.

Last week, Chrysler Motors began output of its 1990 Chrysler Town & Country minivan at the St. Louis plant. The company scheduled 100 units last week.

Overtime was slated last Friday at GM's Janesville, Wis., plant.

GM also scheduled overtime last Saturday at its Lordstown, Ohio, and Moraine, Ohio, plants.

Ford scheduled overtime last Saturday at its Kansas City, Mo., plant.

Canadian cars off 14% for '89

Canadian automakers scheduled production of 24,345 cars last week, 10.79 percent more than the the previous week's 21,974 but 10.91 percent below the year-ago week's 27,325.

So far this year, 383,273 cars have been built, 14.01 percent less than the 445,708 completed last year at this time.

Truck output was targeted at 21,137 units last week, slightly below (0.83 percent) the prior week's 21,313 but 6.66 percent above the year-ago week's 19,817.

Year-to-date, 384,083 trucks have been produced, 4.84 percent more than the 366,335 completed last year at this point.

Ford Motor Co. shut down its Oakville, Ontario, plant today because of problems in the paint department. The Tempo/Topaz plant is expected to reopen May 22.

Advice on China: Forget it

Beijing Jeep sire doesn't see boom

By Stephen Vines
STAFF CORRESPONDENT

HONG KONG — Winds of change seem to be blowing in China again, but the prospects for automakers, if the students succeed in winning democratic reforms, are uncertain as ever.

The most senior American executive to have worked in China's automotive industry has some advice for the foreign auto companies thinking of investing in China: Don't bother.

The advice comes from Don St. Pierre, 47, the former managing director who helped start the Beijing Jeep joint venture between the Chinese government and American Motors in 1985.

St. Pierre said, "I don't think there is any big business for the foreign automotive industry in China. I don't think the market is going to grow by anything like the numbers you hear." The Chinese government has set a goal to produce a million units a year by 2000.

St. Pierre

He dismisses that target, saying 700,000 to 800,000 is more realistic. There are no reliable figures for vehicle production in China. St. Pierre estimates that 470,000 were made last year and says he believes output will stay around that figure for the near future.

He is also skeptical about import prospects, noting that the recent rioting in China has again highlighted the resentment about the importation of luxury vehicles and has forced the authorities to issue yet another edict saying those imports will be banned.

"There's a number of niche markets where you'll make a buck, but it's only short term, say 10 years," St. Pierre said.

He said he believes China's main aim is "to localize as much as possible and head for self-sufficiency. China has no intention of becoming a world competitor. It is only interested in taking care of its own industry and upgrading what it's got."

That strategy may be incompatible with foreign automakers who are not only eyeing the potential of China's huge domestic market, but also looking at it as a low-cost manufacturing base for exports.

St. Pierre headed the Beijing

Peugeot cuts U.S. staff

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — The boxoffice flop of the Peugeot 405 has forced Peugeot Motors of America to eliminate as many as 40 of its 250 employees and cut back operations in its Western and Central regions.

The company last week fused its national service and parts operations and will close its parts warehouse in Carson, Calif., this summer. It will ship all parts from Peugeot headquarters in Lyndhurst, N.J.

Most severely affected was the Central region office in Houston. Peugeot divided Central region administration and sales responsibilities between the Eastern region office in Pine Brook, N.J., and the Western region office in Carson, Calif. Three of the former Central region districts will report to New Jersey, and one will report to California.

The Central region retains functions in training, distribution and technical assistance, and service representatives will continue to call on dealers.

Peugeot made a similar consolidation at headquarters, combining parts and service under Edward Benz, national parts and service manager, a 14-year veteran.

George Blinn, national service manager, left the company last month, and Jean-Claude Laurent replaced him. Succeeding Laurent as national parts manager was Robert Mossman, who had been assistant parts manager. Laurent and Mossman report to Benz.

The company also will close four of its seven training centers, leaving just the three at the regional offices.

The four that will close are remnants of four regional offices that Peugeot closed in the early 1980s.

Thrifty buy is Chrysler's rental shield

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

SAN FRANCISCO — Chrysler Corp. will strengthen its position in the rental car market through the purchase and expansion of Thrifty Rent-A-Car System and possibly additional acquisitions.

Fearful of being squeezed out of the lucrative rental car market, Chrysler said Thursday it will spend $263 million to acquire Thrifty Rent-A-Car System, its second-largest customer.

Chrysler Corp. Vice Chairman Gerald Greenwald said expansion of Thrifty is anticipated and he did not rule out additional acquisitions by Chrysler in the rental field.

"Thrifty is an aggressive company," he said. "They are looking to expand and we can provide that assistance.

"We've looked at the question of whether we should go further. We're not sure at the moment. But chances are Thrifty will be a place from which to expand."

Because General Motors and Ford Motor Co. hold huge shares in the Big 4 rental car companies — Hertz, Avis, Budget and National — Chrysler was in danger of being edged out of the daily car rental market, which buys 10 percent of total U.S. car production annually.

Like Ford and GM, Chrysler is acquiring a rental car company to give it a captive customer in an uneasy economy.

"I expect the industry will continue to soften for a while," Chrysler Corp. Chairman Lee Iacocca said last week. "We might have a 5 percent to 10 percent

Makers face penalties on higher CAFE standard

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — General Motors, Ford Motor Co. and European luxury car makers will fall short of the higher 1990 corporate average fuel economy standard, which the Bush administration is returning to the congressionally mandated level of 27.5 mpg.

But the domestic makers will avoid millions of dollars in penalties by applying credits earned under a lower CAFE standard.

Meanwhile, European luxury manufacturers, whose U.S. sales are already ailing, say they won't be able to avoid the fines from the higher car CAFE. Most said their mix of cars is so limited that, unlike Detroit, they cannot simply shift production to smaller cars to increase their CAFE.

"Almost all of the Europeans are in trouble with the standard," said Gregory Dana, vice president and technical director for the Automobile Importers of America.

While all of the Japanese makers are above the 27.5 mpg standard, they are introducing more powerful and larger, upscale cars.

The Japanese can continue their attack on the lucrative upscale market because they have accumulated considerable credits to cushion their CAFEs in the future.

Manufacturers will be charged $5 per car for every 0.1 mpg shortfall in the corporate standard. GM said that its liability could be as high as $20 million for each 0.1 mpg.

NHTSA said it expects GM to hit 27 mpg for the 1990 model year and Ford to achieve 26.6 mpg. GM hit 27.6 mpg for the 1988 model year and projects 27.0 for 1989.

Ford expected to achieve 26.6 mpg for both 1988 and 1989. Those figures are good enough to meet the 1989 CAFE standard of 26.5.

Daihatsu plans to launch a four-door Charade this fall in the United States

Daihatsu picks Europe to test bigger model

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — While Daihatsu Motor Co. expands its U.S. line later this year with the addition of the Rocky sport-utility vehicle and four-door Charade, a larger car that debuted at the Geneva auto show will be introduced in Europe before going to America.

Toshio Yoshioka, the company's managing director, said U.S. shipments of the Rocky will start slowly and build to 500 per month. Shipments are tentatively scheduled to begin in the fall.

At about the same time, the company will introduce its new 1.6-liter car in Europe. A prototype of the car, called the MS-X90, was displayed earlier this year at the Geneva auto show. The front-wheel-drive, four-door notchback is 168 inches long, 65 inches wide and has a fuel-injected engine. The car's name has not been announced.

The new model replaces the Charmant, a car that flopped in Europe and is no longer sold there.

Explaining the company's strategy for the MS-X90, Yoshioka said "we would like to test" sales in Europe, where Daihatsu has an established dealer network.

"The U.S. dealer body for Daihatsu is still very young" and vulnerable, and any mistakes might hurt the company's reputation, he said. As a result, the company decided to launch the larger vehicle in Europe.

No date was given for U.S. introduction. Daihatsu America currently sells only the Charade three-door subcompact, though the lineup will be expanded this year.

Yoshioka noted it takes more time to develop a product for the United States because of safety and emission standards. For example, the effort to comply with regulations for automatic seat belts delayed production of a new Charade model equipped with a 1.3-liter engine. Base models carry a 1-liter engine.

That larger-engined Charade, which bowed earlier this year, helped Daihatsu America boost sales, he said. Sales were below 1,000 units per month before the 1.3-liter engine was introduced but rose to 1,217 in March and were 1,055 in April.

Yoshioka said the plan is to maintain sales at 1,000 Charades a month with a goal of expanding to 1,500. The four-door model is expected to help Charade sales.

Last year Daihatsu's allocation to the United States under Japan's voluntary export restraints was 17,000 units. Daihatsu has requested that the quota be boosted to 23,000, which would be 1 percent of the 2.3 million limit imposed on Japan's auto industry. The Ministry of International Trade and Industry has not announced the allocation for the April 1, 1989, through March 31, 1990 period.

Daihatsu fell 2,783 units short of its quota in the year ended March 31, 1989, leading some analysts to speculate the ministry is unlikely to increase Daihatsu's allotment. But Yoshioka said a major reason for missing the quota was the need to sacrifice overseas shipments to meet a sudden boom in domestic demand.

Daihatsu America currently has 260 dealers in the United States. Though Yoshioka admitted some observers consider that number too high for sales of 17,000 units, he said the company entered the United States as competition was becoming more intense.

Now, with new models coming, "we feel we are on the right track." He said Daihatsu is aiming for a U.S. sales ratio of two Charades for each Rocky sold.

Yoskioka said Daihatsu is looking for a European partner in order to begin production there. Daihatsu has an agreement with Carrozzeria Bertone to produce the Rocky/Rugger in Italy under a Bertone badge. That vehicle is called Freeclimber.

He called the venture "practice for us." Daihatsu is talking to European automakers, but with European companies nervous about their own futures as 1992 approaches for the unification of the European Community, discussions are becoming more difficult. An independent manufacturing venture, such as Nissan has established in Britain and Toyota is planning, is unrealistic for a small company like Daihatsu.

Ford Bronco II under fire

Magazine charges sport-utility handles poorly

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

As Ford Motor Co. officials and dealers last week downplayed the Consumer Reports article that called for sport-utility shoppers to avoid the Bronco II, one crisis manager said it should be treated as a crisis.

"Ford has to come clean and stick with the facts, show that it has credibility, integrity and concern for its consumers," said Gerald C. Meyers, former American Motors chairman and author of "When it Hits the Fan: Managing the Nine Crises of Business." "That's Lesson 101 in crisis management."

Several dealers predicted that publicity generated by the article and press release by Consumer Reports can have only adverse effects on sales.

"I believe we are going to see a cautious attitude taken by consumers and we could have a downturn in sales," said Craig Kapson, owner of Jordan Ford, Mishawaka, Ind. "At least, I am anticipating that — until we get positive publicity showing it isn't true."

Ford issued a statement saying its vehicles are safe and that the magazine's testing is flawed.

Last year, following a test of sport-utility vehicles, Consumer Reports published an article and called a news conference to report Suzuki's Samurai had a propensity to tip during its handling tests.

Consumer Reports rated Bronco II poorly

After that article appeared, several consumer rights groups petitioned NHTSA for a recall of Samurai. Even though the petition was denied, the article had a devastating effect on Suzuki's bottom line: Sales of the small Japanese off-road vehicle tumbled from an average of 6,000 per month to less than 2,000.

The magazine based its pronouncement on Bronco II on the same accident avoidance tests it used for the Samurai. Consumer Reports said that while Suzuki's Samurai earned a "not acceptable" rating, the Bronco II's emergency handling was "poor," which is not as serious.

According to the article published in the magazine's June issue, Bronco II exhibited "unsettling" behavior while negotiating a pylon-marked course at 42 mph — it reportedly lifted two wheels off the ground.

The article also cited NHTSA statistics showing 19 fatal rollovers per 100,000 Bronco IIs on the road in 1987. The magazine said Samurai was involved in six fatal rollover accidents per 100,000 vehicles.

Since its introduction in 1983, Ford has sold some 650,000 Bronco IIs.

Earlier this year, NHTSA opened a formal investigation of Bronco II to evaluate its fatality rates in rollover accidents that NHTSA said appeared to exceed the average for compact sport-utility vehicles. While Ford contends the Bronco II falls within the statistical middle of that data, the government's investigation continues.

Following the Consumer Reports release, Ford said the magazine's data is incomplete and flawed and that rollover statistics cited by Consumer Reports for 1987 also include 1986-model vehicles.

Ford said the magazine judged the Bronco II based on a single, driver-influenced accident avoidance maneuver — "one in which the driver's input can cause a vehicle to pass or fail."

Ford commissioned a test similar to that used by Consumer Reports and said it found "the Bronco II did not lift even one wheel off the ground." The test was performed by Failure Analysis of Palo Alto, Calif.

Ford said it has repeatedly put the Bronco II through a battery of stability, handling and maneuverability tests as well as computer modeling. Based on the results of those tests, the company says the Bronco II is "a safe and predictable vehicle."

A majority of dealers contacted late last week had not heard or read about the Consumer Reports story, and none could yet judge its impact on sales.

"No doubt we're going to have repercussions, but who really knows what effect it will have on sales?" said Burt Lear, general manager for Wallace Ford, Delray Beach, Fla. "Anybody with any common sense can tell (the article) is ridiculous.

"I can truthfully say I have not had one case of one Bronco II tipping over. I've driven them, my daughter's driven them. It just blows my mind. Hell, it's just like what we went through with the Pinto."

Lear said his dealership sells 12 to 14 Bronco IIs per month.

Said a Ford spokeswoman: "We actually think this to be a non-story and that it will blow over in a day or two.

"We feel this is a very safe vehicle. This action (by the magazine) is not the magnitude of what the Samurai or Audi faced. Our customers have driven the vehicle over 10 billion miles. It has a very fine reputation, and we don't expect this to damage that."

Hearings set on stricter emission standards

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Vehicles are targeted as the largest source of urban air pollution and the most cost-effective to regulate in new Clean Air Act legislation introduced in the House of Representatives by Rep. Henry A. Waxman, D-Calif.

Hearings on the bill are scheduled this begin this week in the House Energy and Commerce Committee's subcommittee on health and environment, which Waxman chairs, kicking off debate that may end in tighter vehicle emission standards.

Those standards have been the same since 1981. The basis for them — the Clean Air Act — has not been amended since 1977.

Many in Washington believe some form of clean air legislation will pass in this session of Congress, citing the support of the Bush administration, which is now preparing its own Clean Air Act legislation to be presented to Congress in early June.

Also adding to the air of urgency is that the timetable for meeting Clean Air Act standards ran out last year and, as a result, nearly 100 cities are in violation of EPA clean air standards.

Waxman's Clean Air Restoration Act of 1989 has 112 co-sponsors and the apparent support of environmentalists and the opposition of the auto industry.

It calls for stricter tailpipe emission standards, on-board refueling vapor recovery controls and a 10-year/100,000-mile warranty for emission-related components.

Current emission standards are 0.41 grams per mile of hydrocarbon; 1.0 gpm nitrogen oxide; and 3.4 gpm carbon monoxide. Waxman's bill tightens these levels to 0.24 gpm HC; 0.4 gpm NOx; and leaves CO unchanged. The standards would take effect in the 1993 model year.

The legislation, if passed, will require EPA to issue a rule within a year requiring on-board refueling vapor recovery systems.

Automakers would be required to install such systems within two model years of the EPA action.

"Overall, the bill provides a good starting point for the House," said Richard Ayres, chairman of the National Clean Air Coalition, a group that counts 35 environmental organizations as members.

"The big polluters will say that this bill goes too far, too fast. To the contrary, we support, and we think that the American people support, a program to go farther and faster," Ayres said.

An auto industry source said "the combination of tighter tailpipe emission standards combined with longer durability requirements in the Waxman bill would be a double hit for the industry."

In addition to the Waxman bill, and the expected Bush administration proposal, there is a competing bill in the House of Representatives. Titled the Clean Air Act Amendments of 1989, it was introduced earlier this year by Rep. Al Swift, D-Wash., and eight other congressmen.

It is referred to as the "Group of Nine" bill and offers tailpipe emission standards stricter than the current rules, but less strict than those of the Waxman bill. The bill tightens HC to 0.25 gpm, NOx to 0.7 gpm and leaves CO unchanged.

The bill does not require on-board vapor recovery controls but leaves the decision on such controls to the EPA.

The auto industry source said the bill "has a degree of reasonability. It is closer to what we would like."

Ford Class A motor home chassis finally debuts

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Ford Motor Co. earlier this month began production of its long-awaited new Class A chassis. Its competitive impact will begin to be felt this fall.

Currently, General Motors and Oshkosh Truck Corp. of Oshkosh, Wis., supply about about 95 percent of the Class A motor home segment. Oshkosh became a player by buying Deere & Co.'s motor home chassis business Jan. 30.

Because of Ford's late entry into the market, Chevrolet and Oshkosh have pretty well sewed up the motor home industry's orders for the 1989 model year.

Ford began producing its new 16,000-pound GVW chassis May 9 in Monterrey, Mexico, after several delays for product refinements. It had originally planned to introduce the chassis last fall.

Jerome Mittman, Ford Division RV sales manager, expects the company to produce about 50 chassis the first month, 300 a month in June and 800 a month by the end of the current calendar year.

He said start-up acceleration is restricted somewhat by parts availability.

GM has had a strong late surge in orders at its chassis plant. It recently added two extra weeks' production to its 1989 chassis buildout schedule, according to Jay Ganatra, manager of chassis products operations for the GM truck and bus group.

Ford's start-up delays have cooled some of the early enthusiasm the chassis generated when it was first announced. But Mittman said, "Once we begin building and shipping it in quantity to our pool accounts, their enthusiasm will quickly rekindle."

Some of the major manufacturers that will be building on the new chassis include Fleetwood Enterprises of Riverside, Calif.; Winnebago Industries of Forest City, Iowa.; Holiday Rambler Corp. of Wakarusa, Ind.; and Coachmen Industries of Middlebury, Ind.

Ford will be "well received by dealers and consumers in the size and GVW range they're operating in," said Thomas Klonowski, Fleetwood's director of product development for motor homes. Fleetwood is the industry's largest motor home manufacturer.

Ford's chassis is available in only two wheelbases and one GVW rating. That market segment, representing motor homes over 30 feet, makes up the bulk of Fleetwood's Class A business. The company still produces smaller Class A's that require shorter and lighter chassis.

"We have a need for smaller chassis and some need for larger ones. We'll still be using chassis produced by other people," Klonowski added.

In addition to its 16,000-pound GVW unit, Ford also has an 11,500-pound-GVW Class A, which it builds in limited quantity, and a 10,500-pound-GVW Class C RV Cutaway unit.

GM, by contrast, offers chassis in six or seven wheelbases and five or six GVWs, according to Ganatra.

They range from 6,800-pound-GVW units, used chiefly in the bakery industry, to the 10,500- to 14,500-pound-GVW units used by RV manufacturers.

GM introduced a 16,000-pound RV chassis earlier this year. It has been only moderately successful since it lacks an automatic park brake system. Officials hope to begin installing the system in the units in three to six months, Ganatra said.

The real test of Ford's success, Klonowski said, will come this fall when motor homes built on its chassis are displayed at major consumer RV shows for the first time.

Fleetwood's current orders with Ford "could be adjusted upward or downward," depending on consumer acceptance, he added.

Ford is bound to eat into either GM's or Oshkosh's business, but which will be affected the the most remains to be seen.

Ganatra said he hopes Ford's entry will help expand the market. GM believes it will be able to maintain production levels "that are economically viable for us," he said.

Klonowski said he believes Ford's entry will benefit the industry both in attracting Ford-loyal customers to the RV market and in helping hold chassis prices down.

He noted that when Deere entered the market a few years ago, GM rolled back its chassis prices for a year.

GM has built up a strong following of customers who are "used to our products," Ganatra said.

Lack of competition had led GM to take the market largely for granted, but within the past two years Ganatra and other GM officials have been working hard to establish closer communications and ties with motor home manufacturers and pay closer attention to their needs.

GM had a big meeting with all its body builders recently and showed them its future programs, how it was proceeding and how they could use those products.

It also asked for feedback from the body builders to help GM focus closely on their needs.

"My goal is to have three or four of our people service the industry on a constant basis," Ganatra said.

As previously reported, GM plans to produce a new 14,500-pound-GVW Class C motor home chassis in January that should help increase its business in that segment at the same time it is gearing up in the upper end of Class A.

Officials expect the new unit to help them maintain a steady production flow at GM's Detroit motor home and commercial chassis plant.

Shipments hold steady for March

RESTON, Va. — RV shipments continued on a fairly even keel in March, with a slight increase in van conversion shipments offsetting declines in motor home and travel trailer shipments.

RV manufacturers wholesaled 38,800 vehicles, 2.76 percent fewer than 39,900 in March 1988, according to the Recreation Vehicle Industry Association.

For the first quarter of 1989, the industry wholesaled 106,200 units, 1.14 percent more than 105,000 last year.

Van conversions continued to prop up the industry's performance.

March shipments of van conversions totaled 18,000 units, up 5.88 percent from 17,000 a year earlier.

First-quarter shipments of 51,300 were up 8.00 percent from 47,500 last year.

Shipments of seat-delete vans by Detroit's Big 3 manufacturers to converters, which reflect future conversion activity, declined in March.

Recreational Vehicle Wholesale Deliveries

	March 1989	March 1988	% change	3 mon. 1989	3 mon. 1988	% change

Source: Recreation Vehicle Industry Association.

The biggest drop was in compact vans.

Overall, General Motors, Ford Motor Co. and Dodge shipped 19,400 seatless vans to converters in March, 15.65 percent fewer than the 23,000 shipped last year.

Of this year's total, 15,700 were full-sized vans, down 14.67 percent from 18,400 shipped in March 1988.

Compact van shipments totaled 3,700, down 19.57 percent from 4,600 a year earlier.

Seat-delete shipments continued to maintain an overall lead over last year during the first three months.

In the first quarter, the industry shipped 61,200 seatless vans, 17.69 percent more than 52,000 in the first quarter of 1988.

Of the total, 48,300 were full-sized vans. That was a 23.21 percent gain over 39,200 in the year-earlier period.

Shipments of seatless compact vans totaled 12,900 in the first quarter, compared to 12,800 in 1988.

RV BRIEFS

Southern Coach's 10th

GREENSBORO, N.C. — Southern Coach celebrated its 10th anniversary in the van conversion business by introducing two special anniversary models.

One is a 2000-series conversion equipped with a color-keyed fiberglass raised roof, remote-control color TV, remote-control video cassette player, power mirrors and other luxury appointments.

The other special model has Duraflex running boards with flares, oak pedestal trim, a 12-volt vacuum cleaner, rear stereo, leather/leatherette furniture and other special items.

RV travel heats up

DETROIT — The recreational vehicle industry is gearing up for a busy travel season, buoyed by 1988's decade-high total of 427,300 new-vehicle shipments and a year-end study showing trips for outdoor recreation on the rise.

A study by the U.S. Travel Data Center shows that trips for outdoor recreation and entertainment rose twice as fast as all other travel away from home.

Outdoor recreation excursions accounted for 41 percent of all trips.

Goshen Coach purchased

ELKHART, Ind. — William L. Warrick, chairman of Mallard Coach Corp. of Nappanee, Ind., purchased Goshen Coach Corp. of Elkhart.

Mallard Coach, an RV manufacturer, was not involved in the deal.

Goshen Coach was renamed The New Goshen Coach Corp.

It produces small- to medium-duty transit buses and recently won a contract worth more than $5 million for 112 para-transit buses.

GM shocks converters

Expected rebate for vans fails to appear

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors stunned the van conversion community and many of its own dealers by failing to approve a widely anticipated consumer rebate program for conversion units.

Converters and dealers had been anticipating an announcement May 10. As proposed, it would have put a $750 rebate on full-sized conversions to help move them at retail.

GM votes no on conversion rebate for customers

Chrysler has been offering a $2,000 rebate on van conversionssince April 1 because of the softening retail market.

Top-level GM executives apparently decided to pass on the rebate, though some industry sources believe it is still alive and may be approved. The program is needed because converters and Chevrolet/GMC dealers have begun swimming in conversion units as retail demand slowed.

There is a particular oversupply of chassis with the 305-cid V-8 and three-speed automatic transmission. GM converters earlier had to take a forced mix of 305 V-8s to get the chassis with the 350-cid V-8 that are in greater demand. That was further complicated by an incentive under which GM offered converters the optional 305 V-8 free as an upgrade from the base six-cylinder engine in those vans if they ordered it with a three-speed automatic.

Most major converters were forced to offer special wholesale spiffs during the first quarter to move their products at the wholesale level.

Now, converters face the prospect of trying to force more products on dealers with such programs — and creating another price war — or paying General Motors Acceptance Corp.'s floorplanning costs on units in their inventory and hoping the market improves.

Converters must begin paying GMAC finance charges after a unit has been in a converter's inventory three months. Finance costs are $4 to $5 per day per chassis, according to one estimate.

Ford, although it also has inventory problems, isn't likely to initiate a van conversion incentive.

The company has been redistributing its chassis — funneling units that might have gone to converters into alternate dealer and fleet distribution channels.

Ford operates in a different way than Chevrolet. It still has a traditional bailment pool setup under which it picks up the cost of a conversion chassis until it is actually sold to a dealer. Thus, it has been redistributing units to cut costs.

Van conversions are caught up in a larger industry problem. The whole automotive market is soft. Inventories of cars and trucks have increased so much they are choking conversions. Even some dealers who would like to stock a few more conversions can't because they are at their limit on floorplan credit.

GM, Ford register heavy lemon law losses in New York

By Helen Kahn
SENIOR CORRESPONDENT

In New York state last year, the percentage of lemon law arbitration cases lost by General Motors and Ford Motor Co. was higher than their market shares in the state.

A report by the state attorney general said Chrysler Motors' share of the lemon law arbitration decisions favoring consumers was less than its market share. Included in the Chrysler total were disputes involving vehicles produced by American Motors.

The biggest winners and losers were imported makes, according to the report.

Mercedes-Benz had the lowest percentage of arbitration decisions for consumers compared to market share, followed by Honda, Toyota and BMW.

Compared to its market share, Yugo had the highest proportion of losing decisions — 1.8 percent of total decisions for consumers compared to its market share of 0.3 percent — or six times greater than would be expected. Yugo was in a similar situation last year in New York state.

The report issued by the attorney general detailed the results of the warranty claim arbitration system established under the state's lemon law.

During 1988, 1,253 consumers in New York state won settlements, refunds or replacement vehicles worth $16.8 million, according to Attorney General Robert Abrams.

Overall, consumers won two-thirds of the cases concluded, and more than 73 percent received their money within 45 days of the decision. Of the 811 cases settled by cash refund, the average refund was $15,451.

Like the recent lemon law report from Massachusetts, New York compared the market share of various companies with their lemon cases. The findings were similar.

The report called GM's record "significantly" out of line. "Although GM accounted for just under 35 percent of the market, it had almost half of the total decisions for consumers, 40 percent greater than its market share," the report said.

The report compared GM's performance unfavorably with that of Honda and Toyota.

"Honda's share of the market was 4.7 percent while its percentage of the total decisions in favor of consumers (0.6 percent) was only 13 percent of its corresponding market share," the report said. "Toyota's share of the market (5.1 percent) was almost five times the proportion of awards issued against it (1.1 percent)."

This is the second year of the state's revised lemon law and the state arbitration program run by the American Automobile Association which will continue to arbitrate disputes through July 1990.

The attorney general's report called the state arbitration program a "significant catalyst" in generating 371 warranty repair dispute settlements. The manufacturer with the most settlements was Chrysler/AMC with 118. The automaker with the highest ratio of settlements to total cases was Volvo with seven out of 13, or 54 percent.

Now, Abrams and consumer advocates propose a state arbitration program for used cars. Noting the success of the new-car lemon law arbitration program, Abrams said the state's used-car buyers — which number about twice as many as new-car buyers — "should have the same access to a quick, inexpensive, fair arbitration program that new-car purchasers have."

The 1984 used-car lemon law mandates a dealer warranty covering major systems of used vehicles. If the car has 36,000 miles or less, the warranty must be 60 days or 3,000 miles, whichever comes first.

For cars with more than 36,000 miles, the warranty must be at least 30 days or 1,000 miles. The terms are the same as for new-car lemons: a reasonable number of repair attempts and then refund or replacement by the selling dealer.

NEW YORK LEMON LAW RESULTS

Make	State market share	Pct. of total 1988 decisions for consumers
General Motors	34.7	49.2
Ford	19.3	20.0
Chrysler*	16.7	15.0
Nissan	5.4	2.5
Toyota	5.1	1.1
Honda	4.7	0.6
Hyundai	2.0	1.4
Mazda	2.0	0.6
Subaru	1.6	0.7
Volkswagen	1.5	1.0
Mercedes-Benz	1.0	0.1
Mitsubishi	1.0	0.5
Volvo	0.9	0.3
BMW	0.8	0.2
Saab	0.5	0.6
Porsche	0.4	0.3
Jaguar	0.3	0.3
Yugo	0.3	1.8
Others	1.8	3.4

NOTE: Includes all passenger cars, light trucks and vans up to 10,000 GVW (gross vehicle weight).

*—Includes American Motors cars.

Ford warranty back in court

ALBANY, N.Y. — New York's top court has agreed to decide if Ford Motor Co. should repay millions of dollars to car owners who paid part of the cost of repairs that were covered by warranties.

Ford had been ordered to return the money by a lower state court. But the Court of Appeals has granted the automaker a chance to argue the case once more. At issue is whether Ford could charge customers $100 for powertrain repairs that were covered by a warranty.

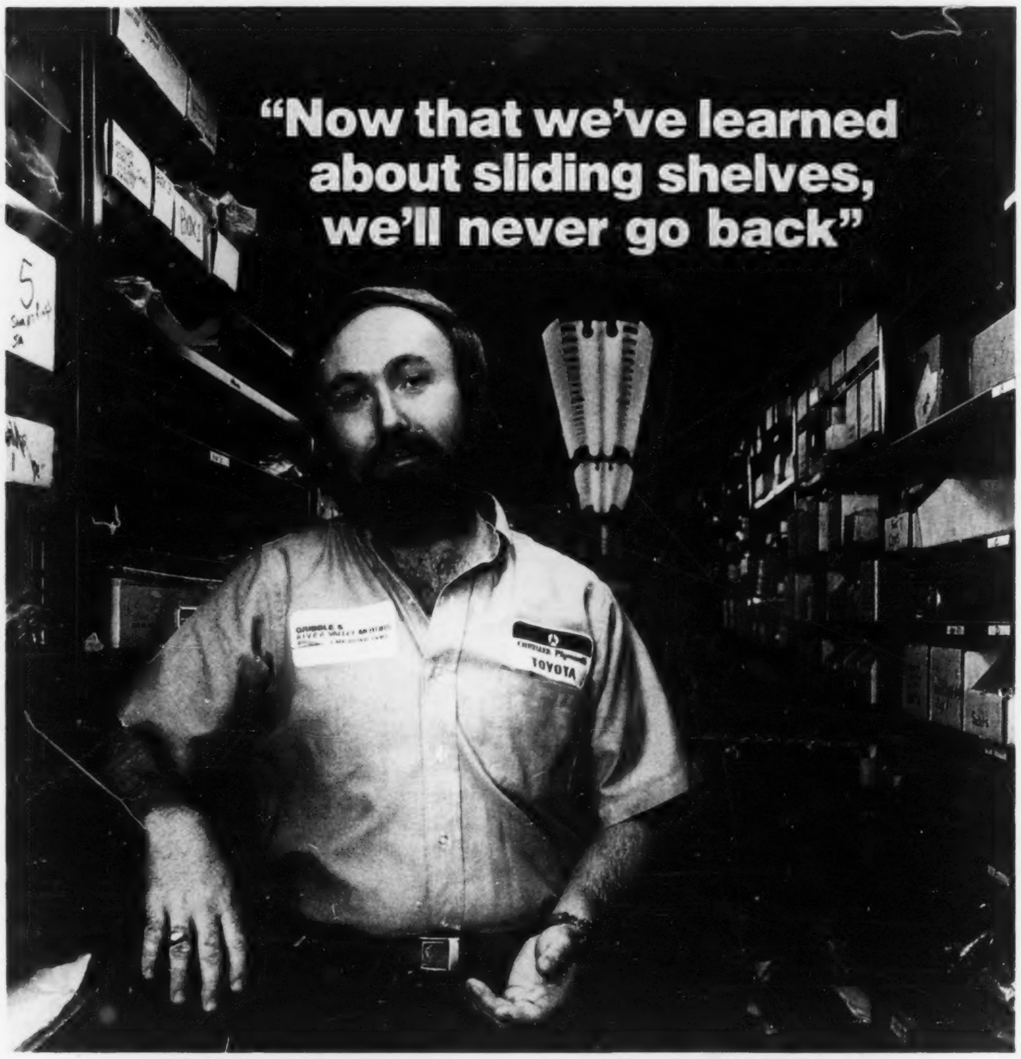
Attorney General Robert Abrams said the practice violated New York's lemon law, which says repairs in the first 18,000 miles or two years must be performed free.

Ford stopped charging the deductible in March 1987, the attorney general's office said.

Ford had said in court papers that granting restitution would cost some $5.3 million, a spokeswoman for the attorney general said.

Ross Lipman, a lawyer for Ford, said the total that will be refunded if the company loses the lawsuit hadn't been calculated and that Ford hadn't determined how many consumers were involved.

— The Associated Press



"Now that we've learned about sliding shelves, we'll never go back"
TOYOTA

Chico Griffith, Parts Manager at Gribble's River Valley Motors in Lancaster, Ohio, knows a good thing when he sees it. So when it came time to spec storage bins for the parts room in Gribble's brand new Chrysler/Toyota building, he turned to Frick-Gallagher **Quick-Bilt® Parts Bins.** The bins with the sliding shelves.

"Thanks to Quick-Bilt® we have a lot more flexibility than we ever dreamed possible when we were using the old-fashioned bolt-together bins." And, as every other parts manager worth his salt knows . . . it takes flexibility to keep things orderly in fast-changing modern parts departments.

But it also takes space. And space is becoming more precious every year. At Gribble the solution turned out to be a Frick-Gallagher **Double Deck**. Custom engineered to fit their location, but using standardized parts to cut costs. The crew at Gribble actually installed it themselves, opening up a whole new floor full of space for bulky body parts, exhaust systems and back-up storage.

We helped Gribble River Valley Motors put the finishing touches on one of the most modern auto dealerships in central Ohio. We can do it for you, too. Just give us a call. **Frick-Gallagher Manufacturing Company, P.O. Box 788, Lancaster, Ohio 43130. (614) 653-5700.**

Ex-Avanti co-owner turns limo maker, plans sports car

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Michael E. Kelly, former co-owner of New Avanti Motor Corp., has formed a limousine-building company and also plans to produce an American sports car named Legado.

Kelly sold his interest in Youngstown, Ohio-based Avanti to his partner, J.J. Cafaro, last year and subsequently founded AAMEK Corp. in Arlington, Texas, located between Dallas and Fort Worth.

Kelly said he will purchase many of the parts to produce the car, excluding the body, chassis and drivetrain, from Brazil. Much of the design work for the vehicle was done there, he added.

"We're not going to reinvent the wheel. I'm trying to introduce it (the car) at around $40,000," Kelly said.

"If we go much over that, it makes it a tough market."

The engine will be an aftermarket version of General Motors' 5.7-liter V-8 from the Chevrolet-Pontiac-Canada Group's Can Expo aftermarket sales operation, he said.

The engine, as it comes from GM, is designed for dealer installation in production Corvettes for sanctioned road-racing applications.

Experimental Automobile Corp. of Atlanta will tear down the engines, then blueprint, balance and reassemble them to closer tolerances, said Thomas Washburn, an Atlanta attorney and co-owner of Experimental Automobile.

Washburn, who was involved in stock car racing and engine rebuilding prior to becoming an attorney, said Experimental Automobile will modify the engines.

Each engine will be equipped with GM's regular Corvette injection system and an aluminum water pump for better cooling, for example. The engine, as sold by GM, has a carburetor and a water pump made of iron.

Washburn said the goal is to get about 345 horsepower from the engine.

He anticipates it will be at least three to four months before the first prototype will be submitted to the EPA for emissions testing and certification.

Legado will be a four-seater with a small back seat. Kelly said he hopes to begin producing the car on a second assembly line at AAMEK's plant by early 1990.

He acknowledged that the specialty-car field had produced "more obituaries than success stories."

"When I actually start the company, I'll probably take it public. But we won't take any investors until there's actually a prototype that you can drive," Kelly said.

Until then, he is bankrolling the vehicle's development himself.

Kelly said he won't pitch any dealers until he has a government-certified vehicle to display.

Kelly bought Avanti in 1986. Prior to that, he owned an Elkhart, Ind., van customizing company called Fantasy Vans. Before that, he ran a small-town auto body shop.

Michael Kelly's new venture, AAMEK Corp., based in Texas, builds limousines

In 1987, the Cleveland Plain Dealer reported that Kelly was sued by some of his former business partners who claimed he used at least $900,000 they invested in an ethanol plant to buy a house and the assets of the then-bankrupt Avanti Motor Corp.

The suit was settled out of court.

Kelly began producing Knight Koach limousines in suburban Dallas in mid-March and is currently turning out about two a week, he said.

AAMEK is pitching its limousines to corporate customers, hotels, resorts and funeral directors.

Knight Koach limousines are based on Lincoln Town Car and Cadillac sedans, extended 60 to 96 inches.

Sales climb; truck gain tops cars

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Helped by an extra selling day, sales of new U.S.-built cars and light trucks inched upward in May's first 10-day sales period. Trucks led the way.

Domestic sales of cars and trucks rose 3.39 percent to total 328,956 units compared to 318,169 in 1988.

Retail deliveries of cars climbed 1.51 percent and totaled 207,353 units compared to 204,270 last year.

Cars moved at an average daily selling rate of 23,039 units, 9.77 percent below the average selling rate of 25,534 in 1988. There were nine selling days in the period this year and eight last year.

Light-truck sales were up 6.76 percent in the 10 days at 121,603 units compared to 113,899 last year.

Mazda dealers delivered 46.56 percent more cars in the May 1-10 span this year than last. Honda dealers moved 20.21 percent more, and General Motors dealers sold 1.80 percent more. Nissan sales slumped 47.16 percent from the year-earlier total, and Chrysler Motors' sales dipped 3.92 percent. Deliveries by Ford Motor Co. dealers were shaved by a skimpy 0.03 percent.

Toyota dealers sold 2,624 cars built in this country in early May, up 260.44 percent from last year when sales totaled just 728 units. Mitsubishi dealerships retailed 694 units in the 10 days.

Toyota began selling Kentucky-built cars in October 1988, and Mitsubishi began selling cars built in Illinois in February 1989.

For GM, combined truck and car sales rose 7.06 percent. Chrysler's combined sales were off 1.12 percent and Ford's were off 0.36 percent. Nissan's combined sales of U.S.-built cars and trucks were 40.03 percent below those of early May 1988.

Porsche 944 sales rise, trail '88

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Although April sales of its 944 line trailed the year-earlier total, Porsche Cars North America attributed an increase over March's volume to price cuts ranging from 5.7 to 8.9 percent on those models.

According to Porsche, total sales of the 944 series in April were 249, an increase of 35.33 percent over 184 in March. Those figures include some 924 models.

But compared with last year's results, 944 sales remain dismal. April sales of 249 were down 64.73 percent from 706 in 1988. With 924 sales factored out, sales were still off 58.39 percent.

A Porsche spokesman attributed the April vs. March gain in 944 sales to the price cut and more advertising.

Porsche's total April sales in the United States were 789, down 48.19 percent from 1,523 last year. The four-month count of 2,597 was down 56.35 percent from 5,949.

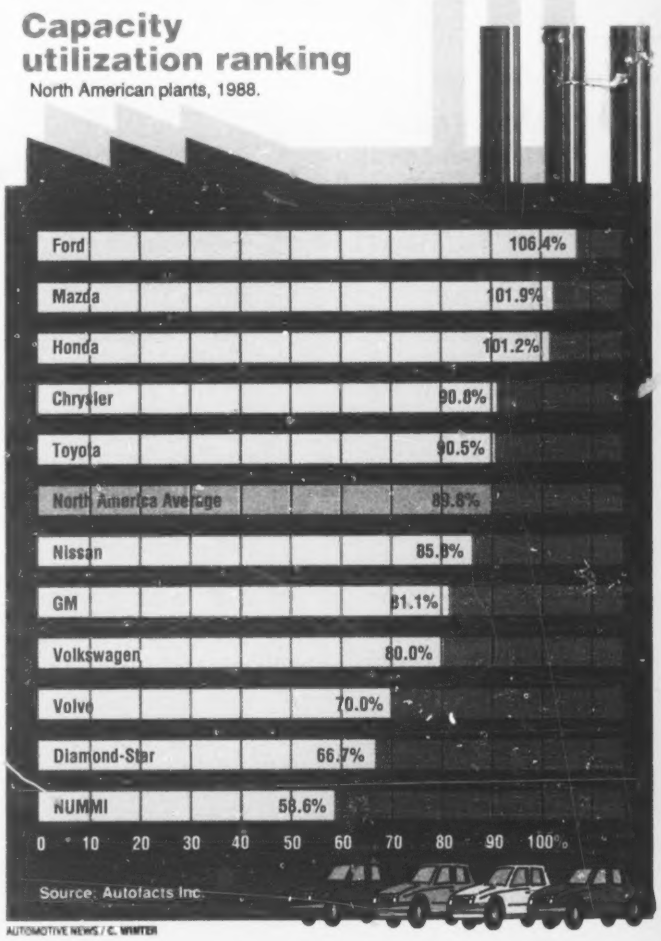
Overcapacity put at 2.2 million

Study says glut will grow; 'vulnerable' plants pinpointed



Capacity utilization ranking
North American plants, 1988.

Source: Autofacts Inc.

AUTOMOTIVE NEWS / C. WINTER

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

A new study predicts North American straight-time manufacturing overcapacity will grow to about 2.2 million cars and light trucks for the 1990 model year and to about 2.5 million in 1991 through 1994.

By adding overtime, North America is capable of building 4.2 million more units than the market demands, and that overcapacity will grow to 5.1 million units in 1994, according to a report by Autofacts Inc. of Philadelphia.

Too much vehicle manufacturing capacity in North America could have far-reaching effects on the UAW and component suppliers, said Autofacts President William R. Pochiluk.

The study concludes transplant companies are the winners, based on their ability to start up and capture production shares.

In the near term, there is a shortage of truck capacity and too much car capacity, Pochiluk said. But by the middle of the next decade, there will be too much truck capacity, he said. Mexican production was not included in the report.

Analysts for the consulting firm concluded there is little evidence that the current overcapacity problem is improving.

"People are assuming that it is getting better," said Pochiluk. "It isn't. Our analysis shows that as the transplants become more involved in the truck business, overcapacity could increase to 3 million vehicles or more" — including pickups, mid-sized vans and utility vehicles.

Pochiluk predicted that by 1994, seven assembly plants will open and three will close permanently. Straight-time capacity will expand 14 percent by 1994, reaching 16.3 million units, the study said. With overtime, it will soar to 18.9 million units.

That contrasts with Pochiluk's production projections averaging about 13.2 million vehicles per year between 1991 and 1994.

Last year, North American car and truck capacity totaled 14.3 million units. The overall capacity utilization rate in North America based on straight time was 90 percent.

There are 82 automotive plants producing cars and light trucks in North America with a combined straight-time capacity of 14.2 million light vehicles and an overtime capability of 16.6 million, according to the study.

Autofacts projected 1989 car and light-truck production at 12.4 million, representing a capacity utilization rate of 87 percent.

Ford Motor Co. led other domestic and transplant companies in capacity utilization in 1988 by a huge margin, reflecting its widespread use of overtime.

Capacity utilization for all Ford manufacturing plants was 106 percent overall, compared to 81 percent for General Motors and 91 percent for Chrysler Motors. Transplants had an overall rating of 88 percent, but many of the transplants were in start-up or changeover modes.

New United Motor Manufacturing Inc., the joint venture of Toyota and GM in Fremont, Calif., registered the lowest capacity utilization rate — 58.6 percent.

"NUMMI was bad on the car side," Pochiluk said. "It has an identity crisis that the (Chevrolet) Geo is an attempt to correct. Yet, the Geo has not caught on with the consumers because of an image and identity crisis."

Chevrolet last year began marketing its imports and its cars from NUMMI under the Geo banner.

Toyota also plans to make better use of the plant by building light trucks there beginning in 1991.

Autofacts lists the plants coming onstream as:

- Chrysler's new Jefferson Avenue plant in Detroit, going into operation in 1992. Chrysler plans to close the existing Jefferson plant thereafter.
- Ford's Avon Lake, Ohio, plant, which will build the VX54 minivan with Nissan in 1991.
- GM's Saturn plant in Spring Hill, Tenn., expected to be completed next summer.
- The Cami Automotive plant in Ingersoll, Ontario, scheduled to begin production of its new car and light truck this year. It is a joint venture of Suzuki and GM.
- Honda's East Liberty, Ohio, plant, which opens this year for 1990-model production.
- Nissan's new plant in Smyrna, Tenn., scheduled to open in 1992 for the Stanza replacement.
- A joint venture of Isuzu Motors and Fuji Heavy Industries, now in the start-up phase in Lafayette, Ind. It will build cars and light trucks for Isuzu and Subaru of America.

Typically, a plant has to average 120,000 units before it breaks even, Pochiluk said.

Canada currently represents 9 percent of the consumption of North American-built vehicles and 14 percent of production. Pochiluk expects consumption to remain steady while Canada's share of production rises to 19 percent by 1994. That could cause a rift between the UAW and the Canadian Auto Workers, he said.

"The UAW will want to know why Canada has a disproportionate share of capacity vs. consumption," he said. "If the UAW views Canada as an outsourcing problem, then it could lead to increased protectionism."

Pochiluk characterized the conclusions of the study as particularly important for parts suppliers, which often are pressured to increase capacity and reduce prices by automakers that promise huge volumes.

Some overcapacity — 750,000 to 1 million vehicles — is necessary to meet production peaks and valleys or other surprises like work stoppages, he said.

Pochiluk said no Ford plant in North America is vulnerable to closure.

Although he downplayed Autofacts' list of most-vulnerable plants, he said the report reflects the company's reading of the relationship between demand and supply. His list includes:

- Chrysler's Jefferson Avenue plant in Detroit is expected to close in 1993-94. The plant is being replaced by a new facility.
- Chrysler's Toledo, Ohio, plant, which builds Jeep Cherokee, is vulnerable in 1995 and 1996. Pochiluk predicted competition from other producers of four-door utility vehicles will reduce Cherokee market share. And Chrysler has already announced that the Jeep ZJ will be produced at the new Jefferson plant.
- Chrysler's Pillette Road plant in Windsor, Ontario, which builds full-sized vans, is vulnerable in 1993 to 1995 because of competition with extended mid-sized vans, including Chrysler's own entry.
- Chrysler's St. Louis No. 1 plant is vulnerable in 1995 and 1996 because the new LH/LX products are slated to be produced at other facilities. The LH/LX platform will be the first all-new platform for Chrysler since the K-car and will be the basis of much of Chrysler's future lineup.
- GM's Ste. Therese, Quebec, plant is said to be vulnerable in 1991 to 1993. It makes Cutlass Ciera and Chevrolet Celebrity. Pochiluk said both products are "redundant" with other GM models, most notably the Ciera wagon competing with the new Oldsmobile Silhouette plastic minivan.
- Pochiluk predicted GM's Lakewood plant in Atlanta will be replaced by Willow Run in Ypsilanti, Mich., in 1990 as the GM300 project — Chevrolet Caprice, Buick Roadmaster and the rear-drive station wagons — moves there. No product has been scheduled for Lakewood.
- GM's Lordstown, Ohio, plant is said to be vulnerable in 1993 to 1995 because it is one of two plants that build full-sized vans. GM is investing in the other plant, in Scarborough, Ontario, to build the extended full-sized van. Pochiluk expects that pressure from mid-sized vans will make Lordstown vulnerable.
- GM's Van Nuys, Calif., plant is vulnerable to closure in 1993 due to costs; the Camaro and Firebird built there are expected to move to a Michigan facility by 1993.
- Pochiluk believes GM's Lansing, Mich., plant is vulnerable to closure in 1992 because by the mid-1990s, GM will have significant excess capacity for mid-sized cars, partly because of Saturn.
- The NUMMI plant is vulnerable to closure after 1993 because it produces vehicles at the low end of GM's lineup. The Geo Prizm is in competition with GM's J-cars (like Chevrolet Cavalier) and L-cars (Corsica/Beretta) and Saturn.

A spokesman for GM said the company doesn't comment on speculation.

GM has said it will boost its capacity utilization rate to 100 percent by 1992. It has not said how it will accomplish that, but analysts say it will require the closing of up to five assembly plants.

A Chrysler spokesman said it has its house in order regarding capacity.

Autofacts has been in business since 1985 and churns out about 160 reports on the auto industry annually. The company spent six months on this study, which was conducted by questionnaires and personal interviews with company representatives and union officials. The study sells for $5,000.

Campbell, Lex shop for U.S. outlets

By Daniel Ward
STAFF CORRESPONDENT

LONDON — Campbell Automotive Group, a Southern California dealership chain that is half-owned by the publicly held British group Lex Service, plans to buy another dealership this year as it aims to double its size.

In February, Campbell bought its eighth store, a Buick-GMC outlet in Riverside County, Calif. David Beck, managing director of Lex Retail here, said expansion is likely to be with U.S. franchises rather than imports.

"We are not in a process of revolution at Campbell," Beck said. "We do want to double its size, but we don't overpay for dealerships, and some of the prices are way over the value.

"Lex is in no hurry because I want to do it at sensible prices," he added.

Beck spent a year in the United States before the joint venture with dealer John Campbell was signed last year.

Since the Campbell deal, Lex has been inundated with offers from owners to sell their U.S. dealerships. Beck said he believes many see harder times ahead.

He said the Campbell group will invest $5 million in two Saturn outlets in Southern California.

Lex is learning from its involvement with Campbell and is contributing to the California group's expansion. Beck said he does not believe that a flood of United Kingdom motor groups will follow Lex into the U.S. market.

Beck said Lex already has learned the value of a high investment in customer service to achieve high customer satisfaction index ratings. Manufacturers' use of the CSI to monitor dealer performance is still at an early stage in Britain.

The British executives have been surprised at the volatility of U.S. dealerships, whose profits are much more closely linked to the success of the manufacturer than in the United Kingdom.

Beck said that in Britain, dealers have been more successful in developing their service, parts and used-car operations, which cushion a drop in new-car sales.

Commenting on the benefits of ownership by a motor group with 82 outlets in Britain, Beck said, "Our advantage is that we can bring to an organization like Campbell the knowledge of running a large group, which is a relatively new phenomenon in America, and the long experience of operating on thinner profit margins."

DAWSON

FROM PAGE 2

some of the land was purchased by Dawson.

But Dah Chong Hong wanted to purchase some of the dealerships before the auto mall was completed and offered Dawson "a very attractive price," according to Dawson's spokesman Ekman. The sale was to occur May 1. But several regulatory and manufacturer approvals were not received in time, and Dah Chong Hong backed out.

"There were enough contingencies and conditions, and not all of the conditions were met by all of the parties involved," said Billy Wong, Dah Chong Hong's chief financial officer in its U.S. administrative office in New York.

But Kelly said the real problems for Dawson came when representatives from Dah Chong Hong sent the statutory bulk sale notice to Dawson's creditors. It listed liabilities of the properties in the proposed deal at $25.9 million and a purchase price of $20 million.

Many of the dealership chain's creditors — believing that Dawson's debt exceeded the selling price and that bills wouldn't be paid on time — demanded cash-only transactions with all the businesses of the chain.

"It looked like a fire sale," said attorney Kelly. He said the statement that Dawson would not pay its creditors on time was erroneous.

Kelly said actual liabilities for the dealership chain are "well below" the $25.9 million listed. The Dah Chong Hong representatives did not subtract the more than $6 million in loans made to the dealership by Hanley Dawson Jr.

Kelly said that in a bulk sale notice, all debts, including contested and contingent debt that may not ultimately be owed, must be listed. But the notice lists only the assets being sold and excludes other assets such as cash or real estate.

Kelly said Hanley Dawson Leasing Co., which operates the leasing, service and Chrysler-Plymouth outlet, suffered most from the creditors' cash-only requirement.

"The Cadillac-Chevrolet operations did not have as many pressures and demands from creditors and a lack of ability to operate on a cash-only basis," Kelly said.

Ekman said the leasing business and Chrysler-Plymouth sales were not up to the company's expectations. Dawson purchased the Chrysler-Plymouth store about five years ago.

Hanley Dawson Leasing is also the operating manager for the import store, though the parent company for the store is under a different corporate name.

All of Dawson's facilities are leased, and the company is completing a renovation of the Cadillac-Chevrolet store on Rush Street.

In the bankruptcy filing, Hanley Dawson Leasing Co. listed total assets of $10.4 million and liabilities of $15.6 million. Secured debt was listed at $9.3 million with "approximately three holders."

The largest secured creditor is General Motors Acceptance Corp., the floorplan lender for the entire group of Hanley Dawson companies, Kelly said.

Other liabilities, excluding contingent or unliquidated claims that might not ultimately be owed, were listed at $6.5 million with approximately 250 holders.

Among the creditors are several other dealerships, including Patrick Saab and Patrick Mitsubishi, which are owned by Dawson's son, Hanley Dawson III. The son owns the Patrick Group, a chain of dealerships in suburban Chicago. Soon after negative publicity surfaced on his father's stores, Hanley Dawson III sent out a profile sheet on his chain of dealerships.

The profile sheet explained that the Patrick Group is a "separate and distinct dealership from the 'downtown' Hanley Dawson dealerships." The father and son also own Dawson & Dawson advertising agency with long-time associate Ekman. The agency is not expected to be affected by the bankruptcy filing, but it is listed as a creditor.

Automakers and their subsidiaries listed as creditors include: Chrysler Corp., Chrysler-Plymouth Division, Chrysler Credit Corp., General Motors Acceptance Corp., Mitsubishi Motor Sales of America, Toyota Motor Distributors, Toyota Motor Credit, Saab-Scania of America and Mid-America Subaru (distributor).

Hanley Dawson Leasing Co. receives the bills for parts and merchandising materials (showroom signs, etc.) for the import stores. Therefore several import companies are listed as creditors.

Dawson continues to talk to interested parties about the sale of some of his dealerships, Kelly said.

Kelly added that the auto mall project has been halted until Dawson can find an investor to replace Dah Chong Hong.

European 'experts' wrong again

Car sales jump 10% in April despite analysts' gloomy guesses

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — European new-car sales jumped unexpectedly in April — once more upsetting predictions that a downturn in the world's largest auto market is at hand.

After zero sales growth in March, which most analysts took as confirmation that a decline had arrived, April volume rose more than 10 percent, according to industry estimates compiled by Automotive News.

Still, analysts aren't convinced that European sales will continue to expand at the record pace of the past three years. Most expect the market to decline in the second half of 1989.

"The market still reflects a very high level of incentivizing," said Stephen Reitman of UBS Phillips & Drew.

Sales in 17 Western European countries rose 7.5 percent to 4,887,900 during the first four months of 1989. Most analysts predicted 1989 sales would drop 3 to 5 percent from 1988's record 12.91 million.

The 10.4 percent rise in April to 1,263,700 units reflected gains in all of Europe's major markets.

Volkswagen AG rode the strong German market during April and narrowed the gap between itself and first place Fiat Auto in company sales rankings. VW sales increased 16.6 percent during the month to 200,300 units — 20,000 more than Fiat Group.

For four months, VW sales — including the VW, Audi and Seat brands — totaled 707,500, an increase of 9.5 percent over 1988 and a 14.5 percent market share.

Fiat Group sales — including the Fiat, Lancia and Alfa Romeo brands — climbed 11.4 percent in April to 180,200. Four-month sales were up 6.2 percent to 750,300, a 15.3 percent share.

Most analysts expect Fiat to hold its lead after finishing in a virtual dead heat with VW in 1988.

"For 1989, we expect the gap between the two market leaders to widen considerably in favor of Fiat," said DRI-Europe in its latest World Automotive Forecast Report. "This is partly because we expect the Italian market to remain strong this year while the West German market falls by 2 percent."

One surprise in April was the laggard performance of Peugeot S.A., by far Europe's fastest-growing volume maker during the past two years.

Its sales were up 12.7 percent during the first four months of the year — best among the six volume makers. Volume was 653,900, good for third place and 13.4 percent of the market. But Peugeot's 5.1 percent April increase to 154,300 units tied Ford for the lowest year-to-year gain among the Big 6.

Analysts feel Peugeot's sales were affected by arch-rival Renault's incentives on the mid-sized R-21 in France. The R-21 formerly was sold as the Eagle Medallion in the United States.

Renault's marketing push in France helped it surge 23 percent in Europe overall to 142,600 sales in Europe for the month. Its gain of 23 percent was the biggest of any European manufacturer. Renault was up nearly 10 percent to 517,400 through April, good for 10.6 percent of the market.

The gap between fourth-place Ford and fifth-place General Motors is narrowing. Ford sales increased 6.9 percent to 550,400 for the first four-months of this year, an 11.3 percent share. Meanwhile, GM was up 11.4 percent to 539,900 units, for 11 percent of the market. Last year, Ford's share was 11.4 percent to GM's 10.7 percent.

Mercedes-Benz sales in Europe were down 0.4 percent in April and slumped 5.4 percent for the first four months. Its January-April total of 154,900 equaled 3.2 percent of the market. In Germany, Mercedes was down almost 12 percent for the year.

Mercedes continues to suffer from the collapse of diesel demand in its home market, where the 190, mid-range W 124 and S-class have all declined this year.

Meanwhile, rival BMW is still running strong. Sales were up 18.9 percent in April to 37,400 and the four-month total was up 22.5 percent at 141,100 units. In Germany, BMW was 23.3 percent ahead for January-April, with most of the gain attributable to the new 5 series.

Nissan continued to lead the Japanese manufacturers with a year-to-year increase of 9.9 percent for four months. Nissan's sales were 138,400. Second-place Toyota declined 3.3 percent to 115,800 and a 2.4 percent share through April

Among national markets, West German sales through April were 7.4 percent higher than last year at 1,010,800 units. April sales were up 6.5 percent to 303,000 cars.

Italian sales rose 21.3 percent in April to 220,100 units. Italy was up 8.9 percent to 895,200 for January-April.

Sales in the United Kingdom rose 15.3 percent in April to 191,300 and for the first four months of 1989 were 9.6 percent ahead of last year at 822,500. French sales increased 9.4 percent in April to 206,000 and were up 9 percent at 791,600 for four months.

Spain, Europe's hottest market during the past three years, cooled down in March, but picked up again in April. April sales climbed 22.7 percent over last year's to 95,000 units. The four-month total of 388,200 was 12.9 percent ahead of the 1988 total.

GM adds development managers

By Dutch Mandel and Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTERS

General Motors has strengthened the role of its development engineers in bringing new products to market.

GM's Chevrolet-Pontiac-Canada Group has added senior-level engineers — now called vehicle development managers — to its vehicle development teams to work more closely in the manufacturing phase of specific models and give the group more organizational muscle.

The new assignments "reflect a refinement and enhancement" of GM's systems engineering, a C-P-C spokeswoman said. Systems engineering is the simultaneous engineering of the vehicle and manufacturing process.

Making senior engineers vehicle development managers will give greater importance to individual platforms and will give development engineers a louder voice in GM's decision-making process.

Four engineers were named.

Neil Ferguson, former director of reliability engineering for C-P-C, has been named vehicle development manager for the GM300 program. That program is charged with redesigning the large rear-wheel-drive sedans and wagons.

John W. Heinricy, former Chevrolet product engineering manager for the Corvette, Camaro and Pontiac Firebird platforms, has been named Corvette vehicle development manager.

Edward A. Vaughan, former assistant staff engineer at the GM truck and bus group, will oversee the GM200, the company's all-purpose-vehicle program.

Norman G. Fugate Jr., previously model-year manager for the 1990 Chevrolet Lumina, becomes vehicle development manager for the Chevrolet Camaro and Pontiac Firebird platform June 1.

Overseeing the vehicle development managers is Jack Turner, who is technical director of vehicle development and validation.

Alfa ads list reasons not to buy its cars

By Raymond Serafin
CRAIN NEWS SERVICE

Alfa Romeo is making an unabashedly emotional pitch for its Spider, going as far in a new campaign as listing logical reasons not to buy the car.

The Spider, a two-seater convertible, is positioned as a fun, perfect-for-summer vehicle in a series of print ads and television spots that broke May 15.

The campaign is designed to boost awareness and enthusiasm for Alfa Romeo as the company heads toward the U.S. launch of its 164 luxury sedan this fall. Jack Frakes, Ross Roy executive vice president, executive creative director, said it is important to "enhance the badge" to set the stage for the 164.

The campaign is the first major effort by the advertising agency, which acquired the account after Chrysler Motors and Alfa's Italian parent, Fiat Auto, formed a joint U.S. distribution company. Alfa Romeo Distributors of North America is relocating from Englewood Cliffs, N.J., to Orlando, Fla.

One television spot, as well as a print ad, presents reasons "against" the Spider.

In the commercial, a woman is heard thinking out loud — as the car is shown in closeups — about such issues as limited ability to carry passengers and luggage and the problem of windblown hair. The camera pulls back to reveal her on a beach with the Spider, as the voice-over says, "Two compelling facts remain — it's summer, and it's an Alfa Romeo."

In print, after reasons "against" the Spider are listed, the "for" side simply shows the Italian roadster, with its top down.

CAFE

FROM PAGE 1

tioned to lower CAFE and should have no problem meeting the 1990 CAFE, said Al Slechter, director of government affairs. Chrysler projects a 1989 CAFE of 27.7 mpg.

To try to meet the higher standard, Ford and GM could restrict the production of larger performance and family cars. But neither car company wants to limit production of those higher-profit vehicles that drag down their CAFE.

"Americans want larger, family-size vehicles, and we'll make what the market demands," a GM spokesman said.

A Ford spokesman said: "Our projection for 1990 will be dictated by the market, inflation and interest rates. We're not sure the government is ready to get in the business of telling people they can only drive a certain type of car."

Both Ford and GM said they will technically be in compliance with the law through at least 1990 by using credits accumulated during years when CAFE was rolled back.

Pleading hardship, GM and Ford petitioned for a reduction of CAFE for each of the 1986 through 1989 model years. The Reagan administration administration rolled CAFE back to 26 mpg for 1986 through 1988 and 26.5 for the 1989 model year.

NHTSA did not have projections for the foreign manufacturers for 1990. But BMW, Mercedes-Benz, Peugeot, Porsche, Saab and Volvo said that based on 1989 projections, they will not meet the 1990 standard. Only Saab expects to meet the 1989 standard.

Jaguar declined to comment, but industry experts pointed out that Jaguar had a CAFE of 22 mpg in 1988 and projects a 1989 CAFE of 20.1 mpg.

Dealers will ultimately get fewer high-performance imported cars, said Robert McElwaine, president of the American International Automobile Dealers Association.

"European carmakers who only have one line of cars don't have small economy cars to balance off luxury lines," he said.

Mercedes-Benz, which had a 1988 CAFE of 21.3 mpg, said it will import more diesels to improve its average fuel efficiency. But even with the new diesel engine the company is expected to introduce in the next year or two, "We're still looking at the numbers, and we're not sure it will work out," a spokesman said.

Volvo, whose 1988 CAFE was 26.0 mpg, said the parent company's minute size makes it nearly impossible to make overnight adjustments.

"We don't have fuel-efficient engines to whip into a car," a spokesman said.

"We don't have any choice than to pay penalties. We don't have the magic formula."

Saab met the 1988 CAFE of 26.5 and expects the same CAFE for 1989, but won't meet the 1990 standard.

"We'll have a hard time with 27.5, and though we've never paid a fine, we don't have any credits," a Saab spokesman said.

BMW has not announced model plans for 1990, "but it looks like we will still be paying a penalty," a spokesman said.

Credits will help GM and Ford for the 1990 model year. But both companies are running short of credits achieved in the heyday of the Reagan administration.

CAFE was enacted in 1975 as a gas-saving measure and the 27.5 mpg level was targeted beginning with the 1985 model year. The law allowed rollbacks which the Reagan administration took advantage of while proposing to eliminate the standard altogether.

Serious efforts to raise the CAFE standard did not mushroom until last summer, when a drought and especially hot summer focused attention on the potential of global warming.

Legislative support of a higher CAFE has grown since the new Congress went into session after the November election.

The movement to increase CAFE has received keen support from EPA Administrator William Reilly. He has advocated a CAFE of 40 or 50 mpg by the year 2000 in response to the greenhouse effect.

Some consumer advocates are heralding the decision to return to 27.5 mpg as a clear sign of what's ahead. Clarence Ditlow, director of the Center for Auto Safety, said the decision may pave the way for a CAFE of 45 mpg by the year 2000.

Previously, the decision on CAFE was left to the secretary of transportation. The latest decision was ultimately made at the White House, after recommendations from more than a half-dozen agencies, including EPA and the Department of Energy.

The decision went through so many layers that the industry knew well in advance of last week's announcement that CAFE would revert to 27.5 mpg.

In announcing the change, Transportation Secretary Samuel Skinner voiced concern over the nation's dependence on imported oil and said "that the 27.5 level would not have a serious economic impact on the auto manufacturers or on domestic employment."

While Chrysler meets the new limit, company officials have been calling for a substantial gasoline tax to encourage buyers to seek more fuel-efficient cars.

"If you want to raise fuel standards significantly above 27.5 mpg, you need two things," said Chrysler Corp. Chairman Lee Iacocca. "We need at least five years of lead time. We are finished with the 1991 and 1992 models. And we need some consumer pull in the form of a gas tax. They've got to get the consumers to demand those types of vehicles just as they do in Europe in Japan."

Because gas costs more than $3 gallon in those areas, there is no need for fuel economy laws since demand is automatically created for small cars, Iacocca said.

GM blasted the Bush administration decision, calling CAFE a "misguided regulatory program."

In a statement, GM said the 1990 CAFE endangers jobs and threatens U.S. competitiveness. A spokesman said GM would resort to closing plants if needed. GM did not provide any economic data to support its charges.

A Ford spokesman said, "CAFE does not address the problem of conserving fuel anymore."

Ford has been advocating that each manufacturer be required to make a percentage increase in CAFE, rather than have to comply with a flat figure.

That kind of remedy is also favored by AIADA as a way to relieve European luxury automakers of the massive fines they face. Mercedes has been told it will owe $20.5 million for failing to meet the 1987 standard. Last December, it paid $20.2 million for not meeting 1986 CAFE.

Jaguar is expected to be liable for $8.14 million for 1986, $5.32 million for 1987 and $5.54 million for 1988, according to NHTSA.

A percentage increase could also subject the Japanese automakers to higher CAFEs and make it harder for them to penetrate the luxury market.

Budget Rent A Car Corp., one of the nation's largest rental companies, said it does not expect manufacturers to push more subcompacts on rental fleets as a result of the higher CAFE. But a Budget spokeswoman said there will undoubtedly be fleet incentives to entice rental companies to buy subcompact cars.

"The manufacturers are making it a priority to sell us more small cars," she said.

Unaffected by the car CAFE change were the rollbacks for 1990 and 1991 light-truck fuel economy standards that had been announced in March 1988 by the Reagan administration. To change truck CAFE, NHTSA must give makers two years' lead time.

For 1989, each manufacturer must meet either a 20.5 mpg average for its light-truck fleet or 21.5 mpg for its two-wheel-drive vehicles and 19.0 mpg for four-wheel-drive versions. Those standards were rolled back to 20 mpg for combined light trucks or 20.5 mpg for 2wd drive and 19 for 4wd during 1990. The standards were rolled back for 1991 to 20.2 mpg combined and 20.7 for 2wd and 19.1 for 4wd during 1991.

Dingell vows to fight efforts to increase CAFE

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Rep. John Dingell, D-Mich., one of Detroit's staunchest supporters, said he will oppose any attempts by Congress to raise the corporate average fuel economy standard.

In a speech before the American Coalition for Traffic Safety, a safety lobby founded by the Big 3, Dingell said raising CAFE to high levels could have "anti-competitive consequences" and encourage the importing of fuel-efficient foreign-made cars.

"If we handle this matter badly, we will essentially export a major part of the auto industry," Dingell said.

"We can make cars that get CAFEs far beyond what the law now requires but there would be two problems: One is, will they sell, and the other is, will they run," Dingell said.

The current CAFE standard is 27.5 mpg. NHTSA reduced it to 26.5 mpg for 1989 models.

Rather than raise the CAFE for new cars, Congress should tighten maintenance and inspection requirements, Dingell said.

The congressman said he will introduce improved emissions inspection and anti-tampering legislation as an amendment to the Clean Air Act. "Real safety and emissions inspections must be undertaken by all states, not just a few," he said.

An aide to Dingell said the proposed amendent will close loopholes that permit tampering with emissions equipment to boost performance. The legislation has the support of the aftermarket industry, Dingell said.

Dingell is chairman of the House Subcommittee on Oversight and Investigations of the House Energy and Commerce Committee, one of the most powerful subcommittees on Capitol Hill. His subcommittee has held hearings on CAFE, but this is the first time Dingell has openly opposed raising CAFE.

CHINA

FROM PAGE 1

Jeep joint venture from September 1985 to July 1988 and left when, as stipulated in the agreement, it became the Chinese partner's turn to appoint the top executive of the company. St. Pierre could have stayed on, but he said he did not want to serve as second in command after running the operation for 2½ years.

Before Beijing Jeep, he was president of Jeep Japan, an AMC subsidiary that imported and distributed Jeeps. Earlier, St. Pierre was general manager of Jeep Indonesia, an assembly operation.

Beijing Jeep is one of the largest joint ventures with China's state-run auto industry. The company produces 5,000 to 6,000 four-wheel-drive Cherokees per year under license from Chrysler Corp., which inherited its share in the deal by acquiring AMC.

The operation gained notoriety in 1986 following a spectacular row between St. Pierre and senior Chinese government officials when it looked as though the company was going to collapse. The Chinese side had run out of hard currency and refused to pay foreign exchange for imported parts and kits.

St. Pierre managed to get a letter delivered to then Prime Minister Zhao Ziyang, now the Communist Party leader, which hinted that unless the money was made available, the Americans would pull out of the company. It asked Zhao to consider the impact of such a move on other potential overseas investors.

St. Pierre took the highly unusual step of publicizing the problem and making it a high-profile issue. The influential Zhu Rong Ji — now mayor of Shanghai — was dispatched as the government's main troubleshooter.

The result was five days of tough negotiations in May 1986 and a final agreement reached in October, after which the Chinese delivered $5 million. That cleared the way "and orders (for vehicles) started flooding in," St. Pierre said. "It was unbelievable."

Now working as managing director of FMC Corp.'s Hong Kong-based China operations, St. Pierre can speak more freely of his experiences at Beijing Jeep and give more candid views on the state of the Chinese auto industry, an industry with which he retains close connections. FMC is a conglomerate whose products include chemicals and tractors.

St. Pierre still sees opportunities for technology transfers and licensing agreements and says pickups, luxury sedans and utility vehicles remain promising niche markets in China.

But his preferred mode of operation is the joint venture rather than licensing agreements.

"I always recommend joint ventures," he said. "There's more negotiation up front but more control afterwards" since the partner is allowed to share in the operation of the venture.

In view of his run-ins with the Chinese government, there are drawbacks to joint ventures, too.

He said it is unrealistic for China to think of becoming a major exporter. He said the country cannot immediately achieve internationally recognized quality standards.

He recalled that during his three years in China, "we never got a part that made spec. Every part had one problem." He said the Chinese attitude is that "close enough is good enough. I guess that may change, but I doubt it."

St. Pierre said China keeps pushing foreign companies to use a higher percentage of locally made parts in their products, but the experience of foreign companies has been that local suppliers cannot meet the standards required. He said he feels more foreign suppliers in China could ease that problem.

P.C. Chan, business development manager for General Motors' China operation, is far more upbeat.

"We do think there are opportunities in China," he said. "There's a big potential for investment. If we thought otherwise, we would not have had an office in Beijing since 1982." GM currently has a deal for the Chinese to build four-cylinder engines under license from GM, but to date, a vehicle for the powerplant has not been announced.

Chan said that even if the Chinese are aiming at self-sufficiency, China is a big market and it will take a long time for domestic suppliers to satisfy demand.

"They need help and need investment and need technology," Chan said. "There is an opportunity for foreign companies."

St. Pierre's views appear to be widely held within the many Japanese companies that have been eyeing the China market.

An executive from one of them, who asked not to be named, said, "If you ask me what Japanese companies think about investing in China, I have to ask you: Have you heard of any Japanese company putting money into China?" To date, they have not, and the source said that reluctance is the root of "a big problem for us in our relations with the Chinese government."

Despite painting a pessimistic picture of the Chinese auto industry, St. Pierre remains convinced that AMC was right when it formed the Beijing Jeep joint venture in 1985.

"We put only $8 million in that company and have made way more than that," he said. While the assembly operation has made only about $4 million, the real money is made in selling the kits to the operation, he said.

But it also had its pitfalls, as evidenced by St. Pierre's 1986 row with the Chinese. His game of brinkmanship was played in a way that other foreign companies had not dared to try.

"The situation was desperate," he recalled. "Nobody in China seemed to understand the problem. It was like they thought the money would appear out of smoke or that AMC would supply it."

Other investors in China typically take the view that the only way to succeed is to play along and weather the storms. St. Pierre believes there comes a time when silence will not work.

"It was really surprising," he said. "There were no repercussions whatsoever. We suddenly started getting really good treatment." He maintained that the row with Beijing Jeep helped other foreign companies that were experiencing difficulties.

Car output climbs 2%; trucks firm

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

Domestic automakers scheduled production of 163,406 units last week, 2.30 percent above the previous week's 159,730 but 4.72 percent below the year-ago week's 171,493.

So far this year, 3,019,431 cars have been assembled, 6.51 percent more than the 2,834,967 completed last year at this point.

Companies split last week's targeted output as follows:

General Motors, 49.13 percent; Ford Motor Co., 23.42 percent; Chrysler Motors, 13.65 percent; Honda of America Manufacturing, 4.74 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 2.72 percent; New United Motor Manufacturing Inc., 2.45 percent; Nissan Motor Manufacturing Co. U.S.A., 1.55 percent; Toyota Motor Manufacturing U.S.A., 1.55 percent; and Diamond-Star Motors, 0.79 percent.

Last week's scheduled truck production totaled 90,316, 0.46 percent above the prior week's 89,906 but 2.10 percent below the year-ago week's 92,256.

Year-to-date, 1,796,553 trucks have been assembled, 6.20 percent more than the 1,691,637 built last year at this time.

GM shut down its Detroit-Hamtramck plant today, with the exception of the Cadillac Allante line, due to the high inventory of Oldsmobile Toronado, Buick Riviera and Cadillac Eldorado and Seville models. The plant will be down one week. It is scheduled to close for model changeover from June 16 to Aug. 11, which includes tooling for the reskinned Toronado.

The Allante line resumed output today after being idle for one week due to slow sales. The Allante line is slated to be shut down for model changeover from Aug. 15 to Sept. 6.

GM scheduled overtime last Friday at its Janesville, Wis., plant and planned overtime last Saturday at its Lordstown, Ohio, plant.

Ford slated overtime last Saturday at its Wayne, Mich., truck plant.

Car, truck build slips in Canada

Last week's Canadian car production target of 18,306 was 5.89 percent below the previous week's 19,451 and 25.32 percent below the year-ago week's 24,511.

So far this year, 396,685 cars have been assembled, 15.71 percent below the 470,620 completed last year at this point.

Truck output was scheduled at 18,552 units last week, a dip of 13.73 percent from the prior week's 21,504 but an increase of 7.69 percent over the year-ago week's 17,228.

Year-to-date, 403,002 trucks have been built, 4.78 percent more than the 384,607 assembled last year at this time.

Ford Motor Co.'s Oakville, Ontario, plant was expected to resume output today. The facility was idle last week because of problems in the paint department.

U.S. cites Japan on trade

Autos not listed, but threat remains

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Autos were not on a hit list of unfair trade barriers as the Bush administration targeted Japan, Brazil and India for talks to open up their markets.

But that does not mean autos will not be used later to retaliate if those negotiations fail.

Minivans as hcstages? Page 60

In labeling the three countries unfair traders under the 1988 Trade Act, the move triggers a section known as Super 301, which requires the administration to negotiate with the countries to remove trade barriers within 12 to 18 months.

If negotiations are unsuccessful, the law requires some sort of retaliation, including tariffs of up to 100 percent. And even though cars aren't targeted, auto importers are worried.

"There are long-term implications for the auto industry, because if the 301 practices are not resolved, ultimately, (the matter) could go to retaliation and then autos are a possible target," said a government affairs spokeswoman for Honda.

Among the targeted areas are supercomputers, forest products and satellites for Japan; import restrictions and licensing in Brazil; and trade-related investments and insurance in India.

The president also ordered negotiations to discuss structural problems that U.S. automakers have complained are bigger impediments than barriers: Japanese pricing practices, a distribution system that excludes foreign-made products, anti-competitive practices like bid-rigging and the high Japanese savings rate.

Hills

How the administration deals with those "invisible barriers" could have more important implications for the domestic auto industry than the 301 negotiations. Chrysler Corp. has been an outspoken critic of Japan's distribution system and has demanded that Carla Hills, the U.S. Trade Representative, take reprisals against Japan.

In an April filing with Hills,

Costly trade-in guarantees

Up to $13,000 per Allante; thousands on Scorpio

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

Cadillac and Lincoln-Mercury are doling out thousands of dollars to trade-in customers as a result of guarantees that pit the used-car prices of Merkur Scorpio and Cadillac Allante against Mercedes-Benz models.

Owners of 1987 Cadillac Allantes have been collecting as much as $13,000 when trading for another Cadillac. Lincoln-Mercury, meanwhile, this month began paying trade-in rebates averaging $2,000 to $2,500 to Scorpio owners who purchase 1989-model Lincolns or Mercurys.

Both programs were designed to establish Allante and Scorpio in the highly competitive luxury-car segment. Scorpio, which today lists for $25,052, was compared to the Mercedes 190E because that car was viewed as the benchmark of the class. Cadillac says it picked the Mercedes 560SL for its program because the German roadster was the only car comparable to the $57,183 Allante.

Audi of America has a similar guaranteed trade-in plan that consumers will be able to take advantage of this fall, two years after the launch of its 1988 models. Audi's formula compares trade-in values to a handful of European competitors.

At this point, Cadillac, Lincoln-Mercury and their dealers are shrugging off the suggestion that the mismatched trade-in values will tarnish the prestige of either make. Instead, they are calling the programs, as costly as they might be, successful.

Yet sales of both models continue to drop, despite discounting at the dealership level.

When Scorpio was launched as a 1988 model two years ago this month, L-M said it

Jeep-Eagle CSI threatens Chrysler boast

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — Nearly two years after Chrysler Corp. purchased American Motors, it still hasn't entirely fixed one AMC defect: poor customer satisfaction.

That could undermine Chrysler's two-year hold on its crown as the No. 1 domestic carmaker in customer satisfaction.

Chrysler in 1988 turned its CSI title into a multimillion-dollar national advertising campaign in which Chrysler Chairman Lee Iacocca proclaimed "Satisfaction is your right" and touted the company's CSI superiority over General Motors and Ford Motor Co.

Chrysler also used the CSI championship claim in its extensive $10 million "Car Buyer's Bill of Rights" campaign.

An industry source said GM was ranked No. 2 and Ford No. 3 in overall CSI among domestic carmakers in 1988, based on the widely used independent research of J.D. Power and Associates, Agoura Hills, Calif.

The stakes are high.

All vehicle makers are pressing for improved customer satisfaction. As product quality becomes comparable, companies with the best customer service will have the competitive edge.

Chrysler has made customer satisfaction a watchword of the 1990s. But when Chrysler purchased AMC in August 1987, it acquired a dealer network that historically had scored below average in satisfying buyers.

Chrysler turned the AMC dealer body into Jeep-Eagle Division. This is the first year Jeep-Eagle scores will be factored into Chrysler Motors' CSI ratings because 1988 was the first full year of Jeep-Eagle sales.

Chrysler projects that Jeep-Eagle's CSI scores will be comparable to those of Chrysler-Plymouth and Dodge divisions by year-end, according to Robert M. Williams, Jeep-Eagle dealer marketing manager. But another company source has suggested it will take several years.

Jeep-Eagle's CSI scores have been rising faster than those of Chrysler-Plymouth and Dodge in the company's own customer satisfaction index, he said. However, the latter two divisions continue to have higher CSI scores than Jeep-Eagle.

Production paced for rebates

By Kathy Boyer and Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTERS

DETROIT — Automakers appear poised for yet another summer of incentive-mania.

Third-quarter forecasts for auto production in the United States nearly match last summer's schedules, while domestic sales are 6 percent below last year's.

The Big 3 are scheduling production of about 1.2 million cars in the third quarter, about 100,000 fewer than they built in the third quarter of 1988. The reduction is due solely to cuts planned by General Motors; Ford Motor Co. and Chrysler Motors plan to produce more cars this year than last.

Hefty increases by the Japanese transplants will boost total U.S. car production schedules to nearly the same level as 1988's actual third-quarter output. Foreign-based automakers and their joint ventures are planning to build about 40 percent more cars in the United States than they did a year ago. They are scheduling about 290,000 units in the third quarter, up about 85,000 from last summer.

July downtime for changeover to 1990 model cars is a week to two weeks at most Big 3 plants, but longer shutdowns are planned for plants producing vehicles with extremely high inventories and where tooling is being installed for new models.

Detailed changeover schedule, Page 56

Even with the long downtime at those plants, industry analysts predict inventories will remain somewhat above desired levels through the summer.

That will force automakers to beef up in-

Yugo plots recovery

Incentives sweetened; 20 people recalled

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Yugo America has beefed up its dealer incentives and recalled some laid-off workers, but Yugo's inventory remains high and some dealers have quit actively selling Yugos.

Dealer incentives can amount to a quarter of the retail price of a car. And one dealer liquidated inventory by selling off Yugos for less than $3,000 each.

Last week dealers said the company needs to double its current rate of sales to about 20,000 cars a year to break even.

Through the first four months of 1989, Yugo sold only 3,331 cars, giving it an annual sales rate of about 10,000 units. The company sold 31,546 units in calendar 1988 and 48,812 in 1987. It has received no new cars since December.

When Yugo America and its parent company filed for Chapter 11 bankruptcy protection Jan. 30, Yugo America had about 6,200 cars in its inventory, and its dealers had between 9,500 and 10,000.

Since the filing, Yugoslavian manufacturer Zavodi Crvena Zastava has covered all corporate expenses, including warranty claims, dealer incentives and product development for the long-awaited Yugo Cabriolet and other new models, said John A. Spiech, president and chief officer of Yugo America.

With Zastava's help, Yugo America, based in Upper Saddle River, N.J., has recalled more than 20 laid-off employees, chiefly in customer service and field representatives. Spiech said last week the staff numbers about 80.

A handful of Yugo's approximately 260 dealers have dropped the franchise since the Chapter 11 filing. Toyota-Ann Arbor, a Yugo dealer in Ann Arbor, Mich., recently sold its last seven Yugos at the fire-sale price of $2,995.

Spiech admitted last week that some dealers have remained on the books even though they have quit actively selling Yugos.

"A lot of 'em are waiting to see what we're going to do," said Spiech, a former Fiat executive and co-founder of the American distributor for Group Lotus plc who took over at Yugo after the bankruptcy filing. "Some dealers are waiting to do a termination or to sell out."

Spiech said last week that the company had sweetened its dealer incentives to try to build sales and overcome the reluctance of dealers with stagnant inventories to order new cars.

The company has been offering dealers $750 to $1,500 off the wholesale price of cars ordered from Yugo America's inventory, which amounted to a 197-day supply of cars as of May 1, down from 242 days on April 1.

The biggest discount was for the most expensive Yugo, the GVX, which has a manufacturer's suggested retail price of $5,699 plus $1,099 for air conditioning.

Under the new programs, dealers get an additional rebate of $800 if they sell two cars and order one from inventory. The one car from inventory also qualifies for the original discount.

A dealer could also pass up the rebate and elect to receive a "free" car from Yugo America. Five retail sales earn a free GVX; four retail sales, a free GV, the basic model with a sticker price of $4,349.

Craig Watkins, vice president of Hal Watkins Yugo-Chevrolet in Oxnard, Calif., said the initial dealer cash incentive didn't interest him because he had 38 Yugos on his lot. Watkins said he hasn't sold any since March.

"That's partly because I haven't been merchandising them. I need to get them sold. I'm tired of washing 'em," he said.

Watkins said the new programs and a session with Spiech last month in Los Angeles perked up his interest in Yugo, and he's planning to resume advertising.

Yugo America resumed national advertising last month in USA Today, reminding people that the Yugo is the lowest-priced car in America and has a 12-month, bumper-to-bumper warranty.

Yugo America was due to file a reorganization plan in U.S. Bankruptcy Court in Newark, N.J., by the end of this month. But last Monday the company obtained permission to postpone the deadline 90 days.

If Yugo America fails to file a plan of its own, it could become subject to a plan devised by its creditors, said Robert Baime, the attorney for Impex Car Corp., Zastava's agent in the United States.

Spiech said he would be visiting Yugoslavia this week to update Zastava on the status of the U.S. importer and distributor.

Baime said Spiech will discuss options for a reorganization plan, including future marketing efforts, new model introductions and satisfying Yugo's creditors.

Yugo America has been offering up to $1,500 per car in dealer incentives

Opel van slated for U.S. sale

Europe may edge Brazil as builder

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — General Motors probably will go ahead with plans for a new Opel-engineered minivan that would be sold in both the United States and Europe, but the vehicle may not be produced in Brazil after all.

Instead, the minivan, which will be based on the next-generation Opel Kadett, would more likely be built in Portugal or Belgium, according to sources at Adam Opel AG.

But the company is still nervous that projected volume for the minivan isn't high enough.

The van is now scheduled to debut in late 1992 or early 1993. Company officials would like annual production of at least 125,000 units, with the bulk sold in the United States by Pontiac. GM marketing executives currently plan on only 60,000 U.S. sales by Pontiac and 25,000 in Europe, which is deemed marginal volume for the investment.

"We're still thinking about whether it is financially viable," said the source. He added, "It is not 100 percent signed off yet, but it looks like it is going to go forward."

In 1987, GM pulled the project out of limbo when it was tentatively decided to build the van in Brazil. But changes in the Brazilian economy, which is wracked by runaway inflation, have reopened the sourcing question. Meanwhile, conditions in Europe have put plants here in the running.

"It is still open about where to build it," said the Opel official. "Brazil is not as attractive as it was a year or so ago. One of the problems is that inflation is so high that we can't be comfortable with it. It makes the whole source kind of iffy."

He conceded that the odds are now probably against the project going to Brazil, but said that op-

Honda shuffles executives as Chino retires

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Honda North America President Tetsuo Chino, the man who shaped Honda's U.S. presence in the 1980s, is giving up his U.S. and Japanese posts to become a fulltime adviser to the company.

He will be replaced by Yoshihide Munekuni, 50, president of American Honda.

Chino, 57, will retire as president of Honda North America, chairman of American Honda Motor Co. and senior managing director of Honda Motor Co. when a list of management changes is approved at the June 29 Honda board meeting in Tokyo. Also on that list is the elevation of two key executives, Shoichiro Irimajiri, 48, and Nobuhiko Kawamoto, 53, to senior managing director posts at the parent company, Honda Motor Co. in Japan.

Munekuni will relocate to Toyko in his position as head of Honda North America, which is the parent company for all 14 Honda subsidiaries in the United States, Canada and Mexico. Munekuni, who has been president of American Honda for the last two years, will also become a senior managing director of Honda Motor Co.

Koichi Amemiya, 48, who has been executive vice president of American Honda, will move up to president, replacing Munekuni.

Irimajiri, who moves up from his managing director role at Honda, is best known in the United States as the former president of Honda American Manufacturing in Marysville, Ohio, where he served until 1987.

Munekuni

Kawamoto

Property tiff clouds Bricklin's Denver plans

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Malcolm Bricklin, the seemingly unsinkable entrepreneur who brought the Yugo and Subaru to the United States, said he is mortgaging the ranch to raise capital to acquire 27 dealerships in the Denver area by mid-August.

There's only one slight glitch. The Meeker, Colo., ranch he said he has mortgaged is in foreclosure.

Still, Bricklin is undaunted. "It is not in foreclosure," he maintains. "There is a counterclaim filed over the mineral and water rights."

But John Thulson, attorney for Milliken Land and Cattle Corp., which sold the ranch to Bricklin, characterized it differently, asserting the ranch is indeed in foreclosure. Proceedings began in March in Rio Blanco District Court, according to court documents obtained by Automotive News.

"We want Bricklin to pay the balance of the note or we want the property back," Thulson said. "Bricklin's counterclaim of fraud is a stall tactic."

Bricklin purchased the $1.8 million ranch in 1986 but still owes $1.5 million on the property, according to court documents. The complaint filed by Milliken Land and Cattle Corp. said Bricklin failed to make a payment that was due last December.

Under the agreement, the former owners can ask for acceleration of payments — the entire balance on demand — which they have done.

Meanwhile, Bricklin shrugs it all off, saying he will pay what is owed on the note as soon as his counterclaim over water rights is settled.

His counterclaim contends he was defrauded of water and mineral rights that were promised him by the former owners.

He said the dispute over the water and mineral rights will affect the price he agreed to pay for the property.

This imbroglio is the most recent of Bricklin's financial woes.

Automotive News reported in February that he owed $131,000 in overdue income taxes for 1986, a local bank seized his helicopter for defaulting on payments, and some of the other properties he owns are involved in foreclosure or other litigation.

Also, a number of local businessmen have sued him for nonpayment for their services. The Colorado Department of Revenue says he owes $58,000 in unpaid individual income taxes for 1987.

On yet another front, Bricklin said he has scrapped plans to raise $2 billion through the sale of junk bonds as part of a larger plan to purchase 1,000 car dealerships nationwide.

Bricklin now says he will pay for the Denver dealerships out of their earnings, essentially a form of seller-financing.

Bricklin said he plans to use capital raised from the mortgage of the ranch to install in those dealerships his own computer systems and a "closing booth," which uses three-dimensional special effects to make sales to customers.

Bricklin says he mortgaged his Colorado ranch to raise capital to acquire dealerships. Others say the ranch is in foreclosure.

Drivers drink less, speed more

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Americans use seat belts more frequently than they did five years ago, drink and drive less, but they break the speed limit more often, according to a survey on auto safety.

The telephone survey of 1,250 persons was conducted last November by Louis Harris & Associates for General Motors and Prevention Magazine. The automaker and the magazine conducted the survey to document progress in automotive safety and pinpoint areas for improvement.

The survey showed that 60 percent of those surveyed said they always wear a seat belt when sitting on the front seat. A similar survey conducted in 1984 showed only 19 percent said they always buckled up.

Seat-belt usage is highest in the West. Westerners report regular seat-belt use, far greater than those surveyed in the Midwest and South. But in the past five years, the biggest gains in seat-belt use came in the Midwest. The East registered the smallest gains.

Seat-belt usage is higher among persons with a college education and high household income (above $50,000 annually), according to the study. Age is not a factor in seat-belt use.

In contrast to the 1984 survey, the recent survey shows women use seat belts more frequently than men. The rate of seat-belt usage among women is rising more rapidly than the rate of seat-belt use by men.

Usage rates in states with mandatory seat-belt laws are significantly higher than states without such laws. The survey found that 71 percent of those surveyed support mandatory seat-belt laws.

The survey showed that 51 percent said they never exceed the speed limit. That compares with 56 percent who made the same claim in 1984. The study calls that a small but significant slide.

The West had the highest number of persons who admitted speeding, followed closely by the East. Conversely, the South had the lowest percentage of persons who admitted speeding, followed by the Midwest.

Women, people over 50 years of age and those without a college education are most likely to obey a speed limit, the survey shows.

Seventy-eight percent of drivers surveyed said they never drive after drinking, compared with 70 percent in the 1984 survey. The decline in the incidence of drinking and driving is significant, the study said, because alcohol is believed to be a factor in at least 50 percent of fatal accidents.

Women, people over 50 and those living in the South or in rural areas have the best record for not driving after drinking, the survey said. People with a college education and high household incomes are the most likely to drive when they have been drinking.

Optimistic Laforza adds 2,000 to U.S. sales estimate for 1990

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Laforza Automobiles has sold only five $43,850 luxury touring vehicles and delivered the first 60 to dealers, but executives of the company are so encouraged they've raised the 1990 sales projection by 2,000.

"We should sell about 1,500 to 2,000 units in calendar 1989, but I'm very optimistic about 1990," said Robert Oliver, Laforza chairman. "I think we can sell 4,000 to 5,000 units." Previous estimates for 1990 were 2,000 to 3,000.

Laforza Automobiles is based in Hayward, Calif.

Oliver said Laforza's complicated, two-continent assembly line will be up to nine or 10 units a day by June 1, with about 40 initial dealers getting shipments of four to eight units a month by the end of June. Production of the body and rolling chassis started in January at the Pininfarina plant in Turin, Italy, and installation of the engine and drivetrain began in March at C&C Inc. in Brighton, Mich.

Initial public and dealer reception is very strong, Oliver said. He said Laforza is encouraging dealers to save at least one vehicle in showrooms for display.

Laforza's beefy construction is derived from an off-road multipurpose vehicle originally designed for the Italian military by Rayton-Fissore, an Italian coachbuilder. The chassis is a box/ladder type, and the body has a separate space frame with steel body panels.

It has been extensively revised for the U.S. market, first by adding a 5-liter Ford V-8 engine and drivetrain, then by upgrading the luxury interior after Laforza bought the marketing rights from Rayton-Fissore and moved the Italian portion of the construction to Pininfarina.

The engine is tuned for low-end torque instead of horsepower, in keeping with Laforza's 8,000-pound towing capacity. It develops 185 horsepower at 3,800 rpm and 270 pounds-feet of torque at 2,400 rpm.

Laforza sales begin; tag is $43,850

The standard four-speed automatic overdrive transmission also is built by Ford. It is linked to a four-wheel-drive transfer case built by Chrysler Acustar's New Process Gear unit and can be shifted into 4wd while the vehicle is moving.

The suspension uses independent, double-wishbones with a stabilizer bar and torsion bars in front and a full-floating beam axle and five-leaf springs in the rear.

Laforza's wheelbase is 106.2 inches, overall length is 179.9 inches and width is 78.7 inches. Height is 72.6 inches, which is garageable. Minimum ground clearance is 6.75 inches and curb weight is 5,250 pounds.

The vehicle has front disk and rear drum brakes and power rack and pinion steering.

The front seats are leather, with six-way power adjustment. The leather rear bench seat is molded for three passengers. Because the rear seat is mounted in front of the rear wheel wells, it has 65 inches of hiproom and 62 inches of shoulder room. Rear legroom is 38 inches.

The rear seat folds down and can be flipped forward or removed for extra cargo space. With the full-sized spare tire in the rear, cargo space ranges from 40.5 cubic feet with the rear seat in place to 96 cubic feet with the seat removed.

Standard equipment includes air conditioning with rear vents; power moonroof; cruise control; tilt steering wheel; leather seats, instrument panel, console and door panels; power seats, steering, brakes, door locks and outside heated mirrors; tinted glass; rear defroster with wiper and washer; full analog gauges including tachometer; and foglights. The only option is a dealer-installed compact disc player.

April truck sales rise

But 4-month total is 4% below '88 count

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Truck sales in the United States rose during April, propped up by incentive programs.

But sales for the first four months trailed last year's, and the prospect of a 5 percent downturn this year continues to be realistic.

During April, light-duty Class 1-3 sales rebounded slightly. Medium Class 4 and heavy Class 8 sales remained strong.

Other segments recorded varying degrees of declines.

Overall, the industry retailed 445,466 trucks in April, 2.14 percent more than last year's 436,117.

For four months of this year, sales of 1,645,634 trailed last year's 1,726,230 by 4.67 percent.

Class 4, which has been a powerhouse, is beginning to show signs of a slowdown.

Class 4 April sales of 2,369 were up 12.92 percent. For four months, the segment's sales of 9,554 showed a 66.50 percent gain over 5,738 last year.

Class 5 sales dropped 79.24 percent in April, due mainly to a sharp falloff at GMC Truck.

Sales of 204 units were down from 1,002 last year. GMC, the major player in Class 5, saw its sales drop to 47 units in April from 742 last year.

GMC suffered sharp declines in its Class 6 and 7 sales as well, as many major fleet buyers are holding off purchasing General Motors vehicles until its all-new medium-duty models are introduced this fall.

For the first four months of 1989, Class 5 sales of 2,042 trucks throughout the industry were off 24.76 percent from 2,714 last year.

Class 6 sales also dipped sharply in April. They were down 32.76 percent on deliveries of 3,617 trucks compared to 5,379 last year. Indicative of its impact on that segment, GMC's sales of 546 trucks in Class 6 were only about one-third of last year's 1,556.

For four months, Class 6 sales of 13,573 trucks were off 34.70 percent from 20,787 a year ago.

Class 7 sales of 8,939 were off 4.04 percent in April from 9,315 last year. For four months, Class 7 sales of 31,364 were off 9.27 percent from 34,569 a year ago.

Class 8 continued strong. Sales of 13,546 in April were up 5.79 percent from 12,805 a year ago.

Four-month sales of 48,415 were up 7.37 percent from 45,091 a year earlier.

TRUCK BRIEFS

Oshkosh adds 5 chassis

OSHKOSH, Wis. — Oshkosh Truck Corp.'s chassis division introduced five walk-in van truck chassis models.

The chassis were designed specifically for pick-up and delivery markets and will accommodate all makes of van bodies.

Oshkosh has had about 100 prototype units in operation during the past year.

The models are rated at 10,000, 12,000, 14,000, 16,000 and 18,000 pounds GVW and are available in a variety of wheelbases.

The 10,000- and 12,000-pound GVW chassis are powered by a Cummins 4BT 3.9-liter, 105-horsepower diesel engine, coupled to a Borg-Warner T19A four-speed manual transmission.

The higher-GVW models are powered by a Cummins 6BT 5.9-liter, 160-hp engine, coupled to the Allison AT 542 four-speed automatic transmission. Standard equipment includes four-wheel disc brakes, power steering and heavy-duty truck-type I-beam front axle.

Variable transmission

LOS GATOS, Calif. — Epilogics Inc. installed the first infinitely variable transmission in a Class VII diesel tractor to demonstrate its potential use in commercial and other kinds of vehicles.

Viking Freight System provided a Navistar 1955-series truck for the prototype installation to demonstrate its applicability in high-torque use.

The Epilogics transmission is completely hard-geared. It uses no belts, pulleys, friction clutches or cone gears. All gears are constantly engaged.

The company said it does not require any disengagement mechanism or friction devices such as clutches or fluid couplings.

Ratios are initially adjustable through a computer-controlled actuator. In the future, the company plans to include a fully integrated electronic interface to adjust them.

The company hopes to license its technology to manufacturers and develop products for specific applications through joint agreements.

Freightliner posts loss

NEW YORK — Freightliner Corp. lost 25 million marks ($12.7 million U.S.) on its 1988 operations, according to a report by Deutsche Bank Group of New York.

The Portland, Ore.-based truck manufacturing subsidiary of West Germany's Daimler-Benz AG blamed its losses on Class 8 model changes, according to "The Global Market for Trucks and Truck Components."

The 100-page report was compiled by Deutsche Bank financial analysts in New York, London, Tokyo and Frankfurt, West Germany.

Deere acquisition

MOLINE, Ill. — Deere & Co. reached a definitive agreement with Cooper Industries of Houston to purchase Cooper's Funk Manufacturing Co. subsidiary.

Terms of the transaction were not disclosed.

Funk Manufacturing of Coffeyville, Kan., produces power transmissions, pump drives and other products for off-highway vehicles for construction and related markets. Its 1988 revenue was $50 million.

Robert A. Hanson, Deere chairman, said the acquisition enables Deere to offer an integrated engine and transmission package for use in a variety of off-highway applications, such as construction, forestry and mining.

Ford links sales goals to new diagnostic system

By Jack Keebler
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — "It's the very cornerstone of our future success," said Leonard Tedesco, Ford Motor Co.'s supervisor of service systems design, about the company's new computerized Service Bay Diagnostic System.

Service bay equipment that helps fix cars quickly — without customers returning with complaints — has been taking on greater importance to automakers, Tedesco said. "As technical gaps shrink and vehicles become more complicated, service is becoming a key variable in building market share," he said.

The Ford diagnostic system is similar in concept and function to General Motors' Computerized Automotive Maintenance System and Chrysler Motors' Service Bay System.

Like the GM and Chrysler systems, Ford's is also a personal-computer-based diagnostic unit. But unlike the others, which use an IBM computer, Ford went to Hewlett-Packard for its hardware. Massive amounts of information storage are provided by compact laser discs used by the Hewlett-Packard units. One laser disc is equivalent in storage capacity to 1,500 floppy discs.

Ford's new Service Bay Diagnostic System

But along with the Ford system's increased sophistication comes a premium price. And that could mean a delay in implementation if dealers balk.

Ford's service-system experts said the machine may cost "just under $30,000," though the final price could be less. The GM system costs $17,879. A price has not been established for Chrysler's diagnostic unit but it is expected to be considerably less than Ford's.

Current plans call for 10 prototype units to be in place at top dealerships by March 1990. By July 1990, 30 units will be on-line. Eventually, about 1,500 Ford and Lincoln-Mercury dealerships, which sell about 70 percent of the automaker's cars, will have the units. There are 5,427 Ford Motor Co. car dealerships.

The purpose of the unit is to provide state-of-the-art diagnostic tools, technical information and expert guidance for shop technicians. Ford describes the computer's toolbox of sophisticated instruments as a diagnostic arsenal. The arsenal includes 27 standard and specialized measurement instruments, such as a vacuum/pressure meter, tachometer, temperature probe, diode tester, fuel pump and injector flow tester and frequency meter.

Other technical goodies include a portable vehicle analyzer and what Tedesco calls a "flight recorder." The portable vehicle analyzer is a car-battery-sized diagnostic unit that pops out of the console and goes along on road tests to analyze EEC-IV vehicle computer gremlins that pop up only when driving. The "flight recorder" is a simple, low-cost data collector for intermittent problems. To use it, the driver pushes a button when the problem occurs. The recorder then reads and stores important engine data before, during and after the incident.

The recorder is then returned to the shop and plugged into the diagnostic unit for problem recognition and diagnosis.

The second function of the system is to provide the latest in technical service information. Using the laser disc information storage system and a 14-inch color monitor, it displays service manuals, technical specifications, wiring diagrams, technical service bulletins and access to Ford's On-line Automotive Service Information System. Technicians can print text or graphics from the screen using a built-in printer.

The third purpose of the computer-driven system is to provide guided diagnostics. That will help the technician make an accurate diagnosis by letting the computer interpret specific vehicle data and recommend appropriate service procedures.

Customer follow-up calls rise

By Francis Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

AGOURA HILLS, Calif. — The number of customer follow-up contacts by new-car dealers has been rising during the past five years, according to The Power Report.

In 1984, the first year the publication tracked dealers' follow-up calls, only 13 percent of the respondents who had repair work done said someone from the service department had contacted them after the visit.

"This number doubled in 1988 to 28 percent of the general service customers reporting that they had been contacted following a service visit," said Linda Hirneise, account director with The Power Report, Agoura Hills, Calif.

The publication's 1988 customer satisfaction index for product quality and service data shows that while contact calls have increased over the years, Audi is the only nameplate that contacts more than half its service customers. Audi dealers contact 56 percent, up 11 percentage points from 1987.

The publication said many of the nameplates showing improvements in service follow-up calls also improved their standings on the overall CSI.

Porsche dealers were second to Audi dealers in the 1988 study, with more than 42 percent of Porsche owners surveyed receiving follow-up contacts, an improvement of 7 percentage points over 1987. Third place was held by Mercedes-Benz at 39 percent, up from 34 percent in 1987.

The top domestics on the list were Lincoln, in seventh place at 35 percent, compared with 30 percent in 1987; and Mercury, ranked eighth at 34 percent, compared with 30 percent in 1987.

Merkur's score was 33 percent, up 5 percentage points from the year before. Buick and Cadillac also were at 33 percent, up 6 percentage points from 1987.

Shop business slips in March; year is up

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Service and parts business at new-car dealerships dropped slightly in March, but volume for the first three months of 1989 was above last year's.

In March, shop volume dipped 1.7 percent compared with March 1988 and was 3.6 percent below February 1989, according to the Automotive News Service Index. The index is compiled from figures on parts and service operations supplied by a cross-section of dealerships throughout the United States.

Year-to-date shop volume was 0.7 percent ahead of 1988's first quarter.

Repair orders written in March declined 6.3 percent from March 1988, and first-quarter orders were down 3.6 percent from last year's.

Despite the drops, gross profit on all labor, parts and accessories sales — the most important indicator from the dealers' viewpoint — increased 3.8 percent in March and 2.4 percent for January-March.

Total labor sales (customer-paid and warranty) climbed 5.5 percent in March, while shop parts sales (customer-paid and warranty) were up 0.4 percent for the month. For the first quarter, labor sales rose 3.8 percent, and sales of shop parts increased 3.7 percent.

Sales of all parts and accessories declined 7.8 percent in March and 1.8 percent for the first three months of 1989.

SERVICE INDEX
98.3*

	March '89 vs. March '88	3 mos. '89 vs. 3 mos. '88
Gross Profit on All Labor and P&A Sales	+3.8%	+2.4%
Repair Orders Written	−6.3%	−3.6%
Total Labor Sales (Customer & Warranty)	+5.5%	+3.8%
Shop Parts Sales (Customer & Warranty)	+0.4%	+3.7%
Sales of All P&A............	−7.8%	−1.8%

* Survey by Automotive News shows that dealers' service and parts business in March 1989 was 98.3 percent of business in March 1988. Service business in the first 3 months of 1989 was 100.7 percent of business in the corresponding period in 1988.

Miskowski goal: best

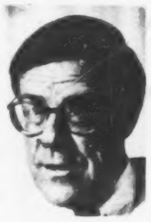
He wants Ford service to lead industry

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — It was a case that any script writer would have relished.

Someone had botched an international communique by violating a corporate procedure. A head was ready to roll.

Lieutenants within Ford's parts and service division dutifully delivered the bad news about the blown procedure to Lee Miskowski, who was expected to swing the ax.



Miskowski

But Miskowski surprised anyone who expected bloodshed. Four years later, his response in that tense situation is still remembered as a symbol of his management style.

"OK, that's history," he said at that time. "How do we recover?"

Miskowski, now head of parts and service, shrugs off mention of the anecdote. It simply reflects his belief that head hunting is a waste of time, he says. One worker's problem, he adds, is everyone's problem.

Miskowski, 57, would have been forgiven if he had looked back when he took over the reins in January. His predecessor, Joe Kordick, was the closest thing to a celebrity the division has ever had. At age 57, Kordick left Ford to help terminally ill cancer and AIDs patients. It was a retirement as unconventional as his leadership.

Miskowski said he isn't fazed by the prospect of filling Kordick's shoes. After all, he pointed out, he's no stranger to the division. He worked five years as the division's national service development manager. In early 1988, he was appointed to the No. 2 position under Kordick, general sales and marketing manager. And he was Ford of Europe's vice president of parts operations in the late 1970s.

He plans to keep some of Kordick's traditions while charting an agenda of his own. Like Kordick, Miskowski will keep his door open. Employees will get a phone call on noteworthy anniversaries with the company. And while he may not be out "hugging" dealers, as Kordick used to say, Miskowski plans to meet them as often as he can.

Kordick helped put those and similar elements of the division's culture in place. Miskowski will be left with the dirty work of tending to the nuts and bolts of the system. The ultimate goal is to make Ford and Lincoln-Mercury dealerships the world's best providers of service by the early 1990s, he said.

Ford's technical training program will be remapped, Miskowski said. It will emphasize longer, in-depth, hands-on training instead of the day-long "quickies."

A combined program among parts and service and Ford's two sales divisions — Partners in Customer Satisfaction — says that any time a dealer comes in contact with the customer is a moment of truth for the company.

One element of parts and service's plan will be to create a central phone system that will handle calls from across the country. It will be similar to the customer assistance center used by General Electric Co.

In many cases, a dispute will go back to dealers for resolution, Miskowski said. But the center will be able to intercede when a customer and dealer can't work it out.

"We want to be as close to 100 percent accessible as we can be," he said. Although the phone system won't be open around the clock, like GE's service, it will at least be available throughout the day in each region of the country.

The program — already being tested in certain regions — will be tied to parts and service's move to another building late this year or early next year, Miskowski said.

The division is scheduled to vacate the historic former Ford administration building on Schaefer Road here and move to the building currently occupied by Ford Motor Credit Co., adjacent to world headquarters.

Feb. trade deficit up

Value of vehicle imports jumps 14.2%

WASHINGTON — The U.S. automotive trade deficit in passenger cars and light trucks expanded 14.2 percent in February due to falling exports and rising imports. Import value surged 9.5 percent, while the value of exports dropped 8.9 percent for the month, compared with the year-earlier period.

February's increase in the automotive trade deficit followed a 3.1 percent decrease in January.

For the 12 months ending in February, the deficit stood at $43.93 billion compared with a $45.46 billion deficit for the 12-month period ending in February 1988.

For February 1989, U.S. Commerce Department figures show a trade deficit for passenger cars and light trucks of $3.97 billion, compared with a $3.48 billion a year earlier.

Total car and truck imports were valued at $4.78 billion during the month, compared with exports of $809 million.

Passenger-car exports totalled 48,999 vehicles with an estimated value of $610.0 million in February. Light-truck exports totaled 17,515 units with an estimated value of $199.0 million.

Passenger-car exports were up 114.8 percent to Japan and 43.2 percent to nations labeled "others" by the Commerce Department. Exports to Canada were off 40.2 percent.

On the import side for the month, Japan registered an 8.8 percent increase in the number of cars shipped to the United States. The value of those imports were up 14.2 percent for the month. Both the value and quantity of Japanese truck imports declined.

Total car and truck imports from all nations had a value of $4.78 billion in February, up 9.5 percent from the $4.36 billion recorded in February 1988. There were 450,273 finished vehicles imported to the United States in February 1988.

Imports of passenger cars reached 372,585 units for the month with a value of $4.03 billion. Light-truck imports totaled 77,688 units, with a value of $750.9 million. The value of imported trucks surged 28.5 percent from one year ago, while shipments increased 6.2 percent, largely on the strength due to a 62.5 percent increase in the value of trucks shipped from Canada.

Canada sent 39,622 trucks to the United States in February 1989, compared with 27,035 trucks in February one year ago.

Sweden posted a 104.9 percent increase in car imports to the United States in February, sending 10,979 cars here.

Japan also increased car shipments with an 8.8 percent increase to 170,600 units.

Canada imported 4.7 percent more cars to the United States in February, while the United Kingdom boosted import car volume by 4.3 percent.

Mexico shipped 13,710 cars to the United States in February, a 6 percent increase from one year ago. Shipping fewer cars in January were: West Germany, off 11.5 percent; South Korea, 29.8 percent; Yugoslavia, 61.6 percent; Italy, 39.5 percent; and Brazil, 42.6 percent.

Ogilvy purchase adds to WPP's auto accounts

NEW YORK — When the British advertising conglomerate WPP Group purchased the Ogilvy Group of advertising agencies this month for $864 million, it added a number of international automotive accounts to its portfolio.

The Ogilvy Group's accounts include the estimated $20 million Ford parts and service business in the United States and Ford advertising accounts in Austria, Belgium, Denmark, France, Great Britain, Italy, the Netherlands, Spain, Sweden and Switzerland.

Ogilvy also owns 75 percent of Scali, McCabe, Sloves of New York, the agency for Volvo Cars of North America. Scali, McCabe also has controlling interest in Fallon, McElligot of Minneapolis, agency for Porsche Cars North America, and the Martin Agency of Richmond, Va., agency for Maserati.

WPP also owns J. Walter Thompson, agency for Ford Division and several overseas Ford subsidiaries.

Spokesmen for Ford and Volvo said there will be no changes in the United States as a result of the takeover.

But Doug McClure, executive director of Ford Motor Co.'s marketing staff, said WPP's Conquest Europe $25 million Alfa Romeo European account and Ogilvy & Mather's Ford of Europe assignments would be a "definite problem" of overlapping accounts. He said the issue hasn't been resolved.

Europeans study U.S. light-truck phenomenon

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — The garageable van concept took the United States by storm five years ago, but Europe is still waiting to see if the same phenomenon unfolds here.

In Europe, trucks are used more for commercial purposes than personal transportation. But DRI-Europe, a research group, recently predicted that Europe's light-truck segment will grow in importance, boosted in part by burgeoning minivan and sport-utility sales.

DRI-Europe Senior Analyst Edmund Chew estimates there were about 1.5 million vehicles registered in Western Europe's light-truck classes during 1988. By the mid-1990s, the figure is likely to be at least 2.25 million, he said.

Nearly every European manufacturer is known to have a small van under study if not in the pipeline. Among them are General Motors of Europe, Ford of Europe, Volkswagen AG, Fiat S.p.A. and Mercedes-Benz.

At DRI's recent European Trucks Outlook Conference here, Chew said West European demand for light trucks grew 16.5 percent between 1986 and 1988. "Light trucks" are defined as commercial vehicles up to 3.5 metric tons GVW, plus some vans registered as station wagons in West Germany. That compares with overall market growth of 12.4 percent during the same period.

Chew said the light-truck category increasingly reflects new segments of demand that are replacing traditional car demand.

"Where changes are expected to occur on a dramatic scale is in the sport-utility and minivan segments," he said.

Chew noted that the United States and European light-truck segments have taken different paths since 1980, when U.S. truck production was little more than that of Europe. Last year, sales of trucks below 6 metric tons totaled 1.42 million units in Europe, compared with 4.9 million in Classes 1 through 3 in the United States.

Much of that U.S. growth has come from new products that appeal to younger, wealthier buyers, which corresponds to a growing young and affluent demographic pattern emerging in Europe.

"Prices do point to the fact that minivans and sport-utilities are being increasingly targeted to wealthy individuals, and the image they are being sold with is a fairly exciting and more fashionable alternative second vehicle," Chew said.

In addition, Chew said an expected increase in consumer spending in Europe will move more buyers into leisure-oriented segments.

"We have reports of new minivans or multipurpose vehicles from most of the big European carmakers," Chew said. "We can expect more models and a refinement of concepts after the fashion of the U.S. market. We think these new concepts and new vehicles will be sufficient to transport the market."

Ford of Europe officials have said they are looking at minivan prospects for Europe, including possible co-development of a vehicle with North American automotive operations. A joint minivan production venture with Mazda in Europe is also thought to be under consideration.

But recent reports in Germany suggest Ford may have put a European minivan on the back burner, citing lack of buyer interest in a competitor for the Renault Espace and Mitsubishi Space Wagon. A spokeswoman at Ford of Germany in Cologne declined to comment on Ford's minivan plans.

General Motors is expected to bring out a high-roof van based on its next-generation Kadett, due in 1991 or 1992. The new van, which also may be marketed by GM in the United States, could be produced in Europe.

Mercedes-Benz is studying its own upscale small van. The vehicle would likely be based on Mercedes' mid-range platform.

At Mercedes' recent press launch for the new SL, Herman Gaus, who is in charge of total vehicle development at Mercedes, said no decision has been made on whether to go ahead with a small van. But he said a minivan may find increasing acceptance in West Germany — Europe's largest market — if authorities impose an autobahn speed limit, as has been suggested.

BMW also admits eyeing the luxury minivan market.

Elsewhere, VW will launch its new T-4 Transporter replacement early next year and reportedly plans to have a passenger version to compete with the Espace and Mitsubishi Space Wagon.

Meanwhile, Alfa Romeo has been assigned the role of developing a new minivan concept for the Fiat Group, possibly based on the Tipo platform that will spawn several new Fiat, Lancia and Alfa models during the next several years.

Last year, Renault upgraded its Matra-built Espace minivan by adding a four-wheel-drive version with viscous coupling and anti-lock brakes.

VAN

FROM PAGE 3

tion has not been finally ruled out.

General Motors do Brasil has invested heavily to begin production of a modified version of the Kadett, and the expansion put the Brazilian affiliate in the running for the minivan project.

But Portugal and Belgium are now considered candidates. GM operates an assembly plant in Azambuja, Portugal, that produces Kadetts for the local market as well as some Kadett-based utility vehicles and Bedford vans and light pickups. The plant employs about 800.

GM closed one of its two plants in Antwerp, Belgium, last year to consolidate production of the new Opel Vectra at the newer one. But GM Europe President Robert Eaton has said the mothballed plant could be reopened to help alleviate capacity constraints in Europe.

Portugal and Antwerp were contenders for a version of Isuzu's new Amigo sport-utility vehicle that will be built by IBC Vehicles in Luton, England. IBC is a joint venture between GM and Isuzu.

There have also been rumors that the minivan might be built in Korea, though European sources could not confirm that possibility.

The six-passenger minivan will use a platform derived from the next Kadett subcompact, due in 1992. The Opel insider described the vehicle as "a people-mover, a Renault Espace-type vehicle, with high roof and high seats."

He said it will resemble GM's forthcoming front-wheel-drive APV vans in the United States and will be offered with four-wheel drive, possibly using the sophisticated new system co-developed with Steyr-Daimler-Puch that recently debuted on the Vectra.

Incentives boost sales in mid-May

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

Buoyed by a plethora of incentives, mid-May sales of U.S.-built cars and light trucks posted a year-to-year gain.

In the May 11-20 period, deliveries of domestic vehicles rose 5.79 percent to 355,758 units from 336,276 last year. Both periods had nine selling days.

The eight domestic car manufacturers sold 223,897 cars in mid-May vs. 216,325 in the same period of 1988. That was an increase of 3.50 percent or 7,572 units.

Light-truck sales moved ahead even more. The four domestic light-truck makers sold 131,861 units, 9.93 percent more than 119,951 in the year-ago period.

Five of the seven makers that were selling domestic cars both years reported gains in mid-May. Ford Motor Co. delivered 2.78 percent more cars in the period thanks to gains by Lincoln and Mercury.

General Motors sold 2.61 percent more cars. Cadillac reported a year-to-year gain of 42.66 percent, and Buick sales jumped 22.26 percent.

Chrysler Motors' 10-day car sales were virtually unchanged from last year's. Plymouth and Dodge reported slight gains.

Among the transplants, Toyota and Honda were the big winners. Toyota sold 2½ times as many U.S.-built cars as it did last year. Camry sales from its new Georgetown, Ky., plant accounted for the advance. Honda sold 26.50 percent more U.S.-built Accords and Civics than in 1988.

Mazda delivered seven fewer U.S.-built cars in mid-May than it did a year ago, and Nissan sold about half as many U.S.-built cars as it did in 1988. But year-to-date sales of Nissan's U.S.-built Sentras are 10.88 percent ahead of its 1988 tally.

Mitsubishi, the newest transplant, sold 854 Eclipse models in early May. Sales of Eclipses built at the Diamond-Star Motors plant in Illinois began in February.

There was a wide swing of gains and losses in light-truck sales in mid-May. GM's light-truck sales climbed 33.48 percent and Ford's rose 6.09 percent. Conversely, Nissan's light-truck sales dived 34.45 percent, and Chrysler's were off 8.36 percent.

GM's combined car and light-truck sales rose 11.17 percent in the 10-day period, and Ford's went up 4.06 percent.

Chrysler and Nissan reported declines. Chrysler's combined car and truck-deliveries slipped 4.37 percent, and Nissan's fell 43.22 percent below the equivalent year-ago period.

Thrifty to buy Snappy, giving automaker new market

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

When Thrifty Rent-A-Car System completes its acquisition of Snappy Car Rental for $40 million, it will give the company a foothold in the growing $1.7 billion insurance replacement market.

Snappy, based in Mayfield Heights, Ohio, also will give Chrysler Corp. another captive customer for its vehicles.

Chrysler announced 10 days ago it is buying Thrifty for $263 million. Last Wednesday, the automaker began its tender offer for all outstanding shares of Thrifty common stock at $27.75 per share.

Thrifty, headquartered in Tulsa, Okla., is on the acquisition trail. Gerald Greenwald, Chrysler vice chairman, made it clear that Chrysler plans to expand Thrifty, hinting at additional purchases of car rental companies.

But in this instance, a Thrifty spokeswoman said the acquisition of Snappy was already under way when serious talks with Chrysler began.

For the Big 3 automakers, ownership of daily rental companies makes sense. The rental industry purchases about 10 percent of total U.S. car production. That represents more than $9.2 billion in revenue to domestic automakers and makes rental car companies their biggest customers.

An ownership stake gives an automaker a captive customer. Hence, General Motors has a stake in Avis Inc. and National Car Rental Systems Corp. And Ford Motor Co. owns part of Hertz Corp. and Budget Rent a Car Corp.

Snappy will replace an estimated 10,000 vehicles next year. Chrysler vehicles currently account for about 50 percent of its fleet.

Snappy was founded in 1973 and is considered the third largest car rental company specializing in the insurance replacement market with approximately 20,000 cars operating from 250 locations.

"Snappy Car Rental has an excellent name and reputation in the insurance replacement segment of the car rental industry and will continue to operate separately under the Snappy brand name," said William E. Lobeck Jr., chairman of Thrifty.

For the fiscal year ended March 31, 1989, Snappy expects to report a net loss on revenue of approximately $134 million. The loss is due to the company's entry into the airport car rental market last year.

"The company's expertise was in the insurance replacement market," said the Thrifty spokeswoman. "It didn't have the capital required to enter the daily rental market. Snappy was profitable the previous five years."

Snappy will withdraw from the airport rental car market to concentrate on its core business — insurance replacement vehicles.

The company rents to people whose vehicles are stolen, damaged or being repaired. Rates are negotiated with insurance companies and are normally 35 to 50 percent lower than rates charged by airport rental companies.

Other differences are that airport daily rental car companies replace their vehicles every few months while insurance replacement companies turn over their vehicles every 12 to 18 months.

The average rental for an airport vehicle is 2.5 days while an insurance rental averages 20 days, the Thrifty spokeswoman said.

"The acquisition will enable us to get into a segment of the market that is growing at a rapid clip," she said. "It will also allow us to combine our vehicle purchasing power."

Snappy is a closely held company. Its chairman and founder, Sanford Miller, will remain with the company as a consultant.

Tecoplan readies two-seater for Hungary build, U.S. sales

FRANKFURT, West Germany — Tecoplan, a Munich-based design and development firm, plans to begin production in Hungary next year of a small two-seater the company would like to sell in North America.

The Leo urban concept vehicle, which debuted at the 1988 Geneva auto show, will be produced in a joint venture with Ikarus, a bus manufacturer. It will be sold in Hungary and throughout Western Europe.

Production is due to begin in late 1990 with plans to build about 2,000 the first year, the company said.

The car has a steel chassis and fiberglass body designed by Target Design, a Bavarian firm. Power will be provided by a 34-horsepower 770-cc Fiat engine.

The price will be about 15,000 marks ($7,610). Standard equipment will include electric windows, air conditioning and leather interior.

PRODUCTION

FROM PAGE 1

centives that are already in effect. Ford and GM began the process last week by adding models, sweetening deals and extending the periods of the incentives. (Related story begins on Page 2.)

One GM insider who is knowledgeable about the marketing situation said rebates of $2,000 to $3,000 a vehicle are possible.

Another company insider said the super-low interest rates could be applied to the more popular 48-month contracts. Few customers now choose the zero and under-3-percent interest rates because they are available only on 24-month loans. Dealers have been urging automakers to offer lower rates on four-year loans.

Said Bernard Campbell, director of automotive services for Data Resources Inc. of Lexington, Mass.: "The automakers have one of two choices to keep inventory levels in line with sales — either cut third-quarter production schedules or offer a blow-out incentive of 0 percent financing for three years or 2.9 percent financing for four years."

The Big 3 soon will be outlining their year-end cleanup plans to dealers.

GM and Ford already have told dealers that they will not pay the traditional 5 percent carryover allowance. The companies used to pay dealers 5 percent of the retail price of the base car and factory-installed options on each previous-model-year vehicle remaining in the dealer's inventory when the next model year starts. That 5 percent has been cut from time to time in recent years to pay for massive year-end incentives.

If incentives don't stimulate sales above the present 9.5 million seasonally adjusted rate and inventories build up, analysts predict automakers could start slicing production schedules of the 1990 models in August and September.

At GM, four plants produce models that will be undergoing changes for the 1990 model year. Those plants will be shut down longer than the traditional one week.

GM's Willow Run, Mich., plant is scheduled for the longest shutdown this year as the company prepares the plant for the redesigned 1991 Chevrolet Caprice. Pontiac Bonneville has been moved to the Wentzville, Mo., plant.

A redesign and lengthening of the Oldsmobile Toronado will take place as GM shuts its Detroit-Hamtramck plant for about 40 days. The changeover isn't the only reason for the long shutdown. On May 1, the Toronado's inventory represented a 184-day supply.

A 30-day shutdown is planned for GM's Kansas City, Mo., plant to prepare for production of the Pontiac Grand Prix sedan.

GM's Doraville, Ga., plant, which builds Oldsmobile Cutlass Supreme, will add a four-door version during a 25-day shutdown. On May 1, Cutlass Supreme inventory was a hefty 128 days.

GM has slated long shutdowns at these plants solely because of high inventories: Reatta Craft Centre, Lansing, Mich., 50 days; Van Nuys, Calif., 30 days; Flint, Mich., 18 days; and Linden, N.J., 15 days.

Ford's Wayne, Mich., plant is scheduled for a 59-working-day model changeover, starting in November. When the plant resumes output in late February, it will assemble the redesigned Ford Escort.

The Wayne plant will be closed the week of June 5 because of high inventories of Escorts, and the Edison, N.J., facility, also an Escort assembly point, was down last week and is down again this week for the same reason. It is the first time in six years that Ford has closed plants because of high inventories.

Shutdowns at Chrysler plants this summer are about the same as last summer except at Belvidere, Ill., where the plant will retool for the new Y-body cars in September. The Y-bodies are the Chrysler Fifth Avenue and Chrysler Imperial.

Chrysler said last week it has canceled plans to add a second shift to its Jefferson Avenue assembly plant in Detroit, which builds the L-body Dodge Omni/Plymouth Horizon.

An estimated 1,600 hourly workers, therefore, will remain on indefinite layoff.

But Chrysler will add 200 workers to the first shift to permit a production boost to 470 cars daily from 352.

SHUTDOWN DATES FOR U.S. CAR ASSEMBLY PLANTS

Plant	Model changeover/vacation dates (Tentative)	1990 product	Days Shut 1989	Days Shut 1988
GENERAL MOTORS				
Arlington, Texas	Weekend change July 28 to Aug. 1	Cadillac Brougham, Oldsmobile Custom Cruiser and Chevrolet Caprice	4	0
Bowling Green, Ky.	Aug. 2 to Aug. 8	Chevrolet Corvette	5	0

PRODUCTION

U.S. output dips as Ford closes plant

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

The softening of the new-car market in the United States became apparent last week as Ford Motor Co. announced it will close plants to cut inventories for the first time since 1983.

Last week's targeted domestic auto production totaled 147,204 units, 7.70 percent below the prior week and 9.02 percent below the year-ago week.

So far this year, 3,162,708 cars have been assembled in the United States, 5.41 percent more than last year at this point.

Of the Big 3, only General Motors is outpacing last year's production. Each of the transplants has produced more cars this year than last.

Truck output was targeted at 86,732 units last week, 3.61 percent below the prior week but 2.36 percent more than the year-ago week.

So far this year, 1,882,948 trucks have been built, 5.88 percent more than last year at this time.

Citing softness in the subcompact market, Ford shut its Edison, N.J., assembly plant for two weeks beginning May 22. The plant produces Escort. Its Wayne, Mich., plant, which also builds Escort, will be shut the week beginning June 5.

Ford also said it and the UAW have reached an agreement under which the company will give workers "maximum practical notice" before shutdowns. In the past, shutdowns usually were announced on the Wednesday preceding a plant closing.

Chrysler Motors last week canceled plans to add a second shift to its Jefferson Avenue assembly plant in Detroit, where Dodge Omni and Plymouth Horizon are built. It will, however, add 200 workers to the first shift at Jefferson to boost production to 470 daily from 352.

The company scheduled four assembly plants for overtime this week. Slated to operate two nine-hour daily shifts are Newark, Del.; Toledo, Ohio; St. Louis Assembly Plant No. 2; and Dodge City Truck Plant, Warren, Mich.

Canada builds more trucks

Scheduled Canadian truck production rose last week, but car output was mixed — higher than the prior week but lower than the year-earlier week.

Canada's truckmakers were scheduled to produce 17,588 trucks last week, up 5.88 percent from the prior week's 16,611 and up 10.78 from the year-earlier week's total of 15,877. Truck production is outpacing 1988 by 4.64 percent.

The week's car production of 19,827 climbed 10.14 percent from the prior week's 18,001 but fell 8.57 percent from the year-earlier week's 21,685. This year's car production is 15.47 percent short of last year's pace.

General Motors' Oshawa, Ontario, plant will operate Saturday. It is the only Canadian plant with overtime scheduled.

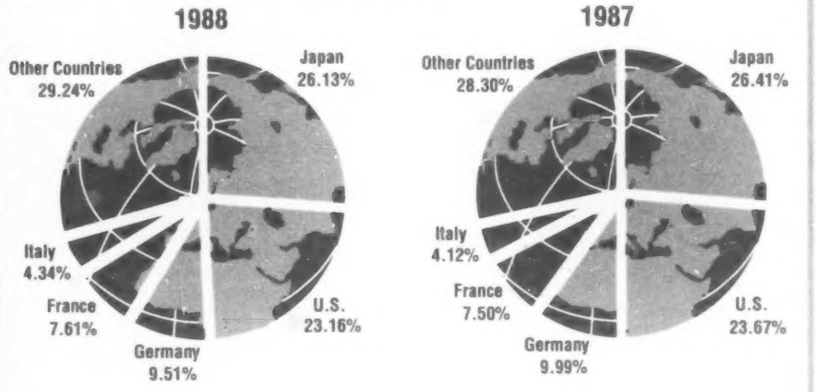
PRODUCTION

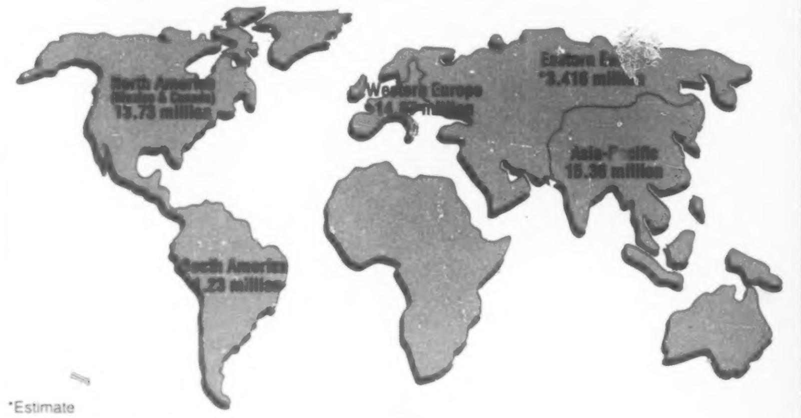
Global vehicle output climbs by about 2.2 million units

In sheer volume, Japan and the United States were the world's top producers. Among the 5 majors, only France and Italy increased world share.



Sources: Auto News MVMA, AID LTD., JAMA.

Total 1988 output was about 48.61 million units vs. 46.38 million in 1987.



North America (Mexico & Canada) 13.73 million
Western Europe
Eastern Eu
*3.416 million
Asia-Pacific 15.38 million
South America
1.23 million

SALES/REGISTRATIONS

North American car and truck producers in 1988 turned in the second-strongest sales figures in recent automotive history.

In passing five million sales, light trucks set a record for the fifth straight year.

U.S. automakers, including Japanese transplants, gained market share by selling 7,526,034 cars in 1988 compared to 7,081,262 in 1987. Imports sales fell to 3,061,039 units in 1988 from 3,144,042 in 1987.

In North America, the United States and Canada compiled combined new-car registrations of 11,523,058 units in 1988 compared to 11,194,161 in 1987, according to R.L. Polk data.

In Western Europe, sales records were set and annual new-car registrations continued to climb. Nearly 13 million new cars were sold in Western European countries in 1988.

Western Europe's car registrations surge 5.95%

Western Europe held the lead in worldwide passenger car registrations again in 1988. Figures in millions.

*Note: Class 1-3 sales based on manufacturer reports to Automotive News. Class 4-8 sales based on manufacturer reports to the Motor Vehicle Manufacturers Association.
Ford and General Motors sell domestically built light trucks in Class 3, but do not break them out. They are included in the companies' Class 2 sales. Figures reported for Class 3 for these companies are imported vehicles, Isuzu-built units in the case of GMC and Chevrolet.

SALES/REGISTRATIONS

New-car registrations in the United States in 1988 (10,479,931) topped 1987 (10,165,66) by 3.09 percent, or more than 314,000 units.

Registrations of U.S.-built cars climbed 332,008 units, or 5.16 percent, to 6,770,103 units in 1988 compared to 6,438,095 in 1987.

Import-car registrations slipped a fraction of a percentage point (0.31 percent), or 17,737 units, in taking 35.40 percent of the 1988 total market.

The U.S. Big 3 captive imports' share of registrations grew by 66,001 units, or 17.47 percent, in 1988. Captive imports accounted for 11.96 percent of the import-car registration total last year. Other import car registrations declined 10,261 units to 3,266,154 in 1988 compared to 3,276,415 in 1987.

Recreational vehicle shipments climb 6.77 percent; best since 1978

1988

(Total Shipments—427,300)

Travel trailers	96,900
Folding camping trailers	42,300
Truck campers	11,000
Motor homes	72,900
Van conversions	204,200

1987

(Total Shipments—400,200)

Travel trailers	92,800
Folding camping trailers	41,600
Truck campers	10,100
Motor homes	73,800
Van conversions	181,900

1986**

(Total Shipments—379,500)

Travel trailers	86,000
Truck campers	7,400
Camping trailers	36,500
Motor homes	67,700
Van conversions	181,900

1985**

(Total Shipments—359,200)

Travel trailers	82,900
Truck campers	6,900
Camping trailers	35,900
Motor homes	68,700
Van conversions	164,800

1984**

(Total Shipments—398,200)

Travel trailers	92,400
Truck campers	7,600
Folding camper trailers	40,900
Motor homes	82,000
Van conversions	175,300

1983**

(Total Shipments—358,000)

Travel trailers	90,000
Truck campers	6,800
Folding campers	37,500
Motor homes	69,500
Van conversions	154,200

1982**

(Total Shipments—258,000)

Travel trailers	65,500
Truck campers	5,700
Folding camping trailers	34,300
Motor homes	41,200
Van conversions	111,300

1981**

(Total Shipments—239,100)

Travel trailers	63,800
Truck campers	5,100
Fold-down camping trailers	35,000
Motor homes	35,400
Van conversions	99,800

1980**

(Total Shipments—181,400)

Travel trailers	51,900
Truck campers	5,000
Fold-down camping trailers	24,500
Motor homes	28,600
Van conversions	71,400

1979**

(Total Shipments—303,300)

Travel trailers	90,200
Truck campers	13,800
Fold-down camping trailers	31,100
Motor homes	64,100
Van conversions	104,100

1978**

(Total Shipments—526,300)

Travel trailers	159,800
Truck campers	48,200
Fold-down camping trailers	48,200
Motor homes	157,200
Van conversions	136,400

1977

(Total Shipments—745,600)

Travel trailers	167,900
Truck campers	31,900
Fold-down camping trailers	53,900
Motor homes	280,200
Pickup covers	211,700

1976

(Total Shipments—656,300)

Travel trailers	189,700
Truck campers	42,000
Camping trailers	53,300
Motor homes	156,100
Pickup covers	215,200

1975

(Total Shipments—552,100)

Travel trailers	150,600
Truck campers	44,300
Camping trailers	48,100
Motor homes	96,600
Pickup covers	212,500

1974

(Total Shipments—529,200)

Travel trailers	126,300
Truck campers	45,400
Camping trailers	55,200
Motor homes*	68,900
Pickup covers	233,400

NOTES: **—Pickup covers no longer included in RVIA shipments

*—Imports of Volkswagen Campmobile motor home included only in 1972–74 totals

NOTE: Totals from 1969-1980 include Brockway and Diamond Reo registrations — not shown here.

* Numbers up to 1983 reflect White Motor as an independent operator; From 1984 through 1987, they reflect combined Volvo White operations. From 1988 on, they reflect Volvo GM heavy trucks as a new joint venture operation in Class 8.

① Dodge included in Chrysler Corp. totals in 1983. 1986 Dodge and Plymouth totals are broken out in 1987 and 1988.

② Freightliner included in White totals until 1970, included in Daimler-Benz beginning in 1983.

③ Kenworth, Peterbilt included in Paccar totals beginning in 1983.

PRODUCTS/SPECIFICATIONS

1989-model U.S. passenger car specifications

New-car specifications are compiled by Automotive News from information supplied by automakers, car divisions, vehicle importers, the Motor Vehicle Manufacturers Association and other sources. Base models are listed. Upgraded-trim versions with no changes in engines or dimensions are not listed.

Engine classifications are: I — inline; V — V-shaped block; H — horizontally opposed; R — rotary.

Carburetion classifications are: 2V — two-barrel carburetor; 4V — four-barrel carburetor; FI — electronic fuel injection; MFI — multipoint fuel injection; TBI — throttle-body fuel injection; SFI — sequential fuel injection.

Drive system classifications are: F — front-wheel drive; R — rear-wheel drive; 4wd — four-wheel drive.

New-car dimensions and capacities are explained at the top of the chart. Every reasonable precaution has been taken to insure accuracy, but Automotive News cannot assume any liablity by reason of inaccuracies or omissions. Specifications are subject to change without notice.

1989-model domestic car body family designations

There are major revisions in body family (platform) designations of General Motors, Ford Motor Co. and Chrysler Motors '89 model cars.

Chrysler added a new front-wheel-drive A-body Plymouth Acclaim and Dodge Spirit. Dropped were the: CV-body Chrysler Town & Country Wagon and LeBaron four-door notchback; and E-body Plymouth Caravelle, Dodge 600 and New Yorker Turbo. K (U.S.-built) and H platforms were phased out during '89.

Ford Motor Co. discontinued the EXP, but added the ST16-platform Probe built by Mazda Motor Manufacturing (USA) Inc. Ford Thunderbird and Mercury Cougar were redesignated MN12 in '89.

Ford has adopted the practice of giving its passenger-car programs specific code designations. For example, Lincoln Continental is the FN9 and Taurus/Sable the DN5, even though they are derived from the same platform. The first initial refers to car size or type. The second initial indicates whether it is a North American program (N) or a car developed with Mazda (T). Some future products will carry a W designation, indicating a world car strategy. For example, a replacement for the U.S. Tempo/Topaz and European Sierra is being developed under the CDW27 code name. Initials indicate the car will be between Tracer (C) and Taurus (D) in size and is being developed for world markets — Europe and North America.

Other future code names will include the 1990 model Town Car (FN36) and 1991 model replacements for Escort and Tracer (CT20) and Crown Victoria/Grand Marquis (EN53).

General Motors dropped several nameplates in '89: the B-body Pontiac Parisienne Wagon; rear-wheel-drive G-body Chevrolet Monte Carlo and Oldsmobile Cutlass Supreme Classic; P-body Pontiac Fiero; J-body Oldsmobile Firenza and Cadillac Cimarron; and C-body Fleetwood d'Elegance.

Other GM changes in '89 include: a new C-body Buick Park Avenue; redesignated Z-body Buick Reatta (formerly E-body); renamed H-body 88 Royale (formerly Delta 88 Royale); and grouping of Chevrolet imports under the Geo nameplate. ■

PRICES

Retail prices, 1989 U.S. and import models

This table shows the prices of 1989 domestic and imported cars as of May 9, 1989. All prices are manufacturers' suggested retail prices. Import prices include ocean freight and U.S. import duty. None of the prices include destination charges, state and local taxes, optional equipment or any charges that may be passed on to the buyer. In the equipment section, "Std." means standard equipment; "N.A." means the item is not available on the model mentioned. On some models, the standard-equipment radio is a delete option.

Retail prices, 1989 light trucks, domestic and import

These tables show the prices of domestic and imported light trucks, sport-utility vehicles and vans as of May 9, 1989. Prices are manufacturers' suggested retail prices. Import prices include ocean freight and U.S. import duty. None of the vehicle prices include destination charges, state and local taxes, optional equipment or any charges that may be passed on to the retail buyer. Vehicle prices are for the base vehicle with the base engine. In the equipment section, "Std." means standard equipment; "N.A." means the item is not available on the model mentioned. On some models, the standard-equipment radio is a delete option.

OPTIONS/EQUIPMENT

Car buyers continued to show strong interest in most factory-installed convenience, comfort and safety options in 1988.

More than 86 percent of all cars built in the United States last year were equipped with three- or four-speed automatic transmissions. Sporty five-speed gearboxes maintained a small share of the market.

Six-cylinder engines went into nearly one-third of the cars produced. Interest in turbocharged powerplants waned somewhat in 1988 compared to the previous year.

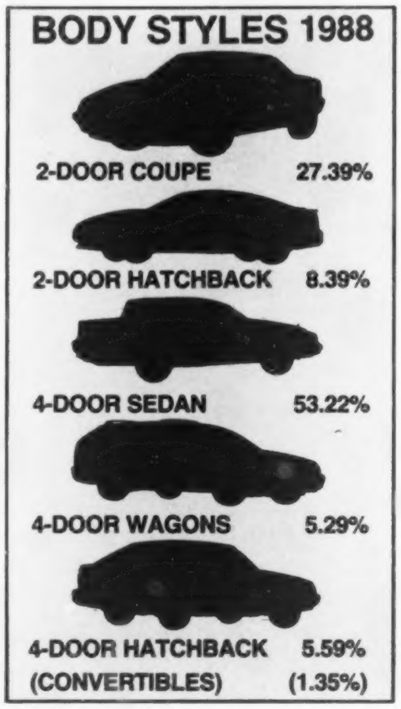
Power options were installed on the majority of cars last year. Power steering and power brakes were virtually standard equipment.

Demand varied for sophisticated factory-installed sound and entertainment systems in 1988. Most cars were equipped with stereo AM/FM radios. Almost half of the domestic cars included stereo cassette players. But compact disc installations garnered less than one-half of a point of total car production.

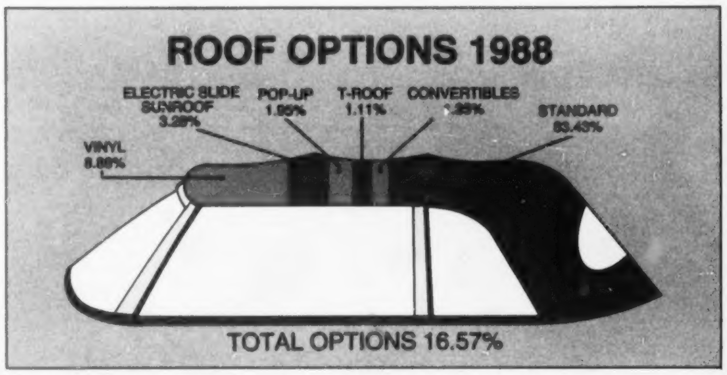
Interest in anti-lock braking systems, and expanded availability of air bags as optional or standard equipment, added to the popularity of automotive safety features last year.

Also gaining momentum were styled wheels which were installed on more than 29 percent of domestic cars.

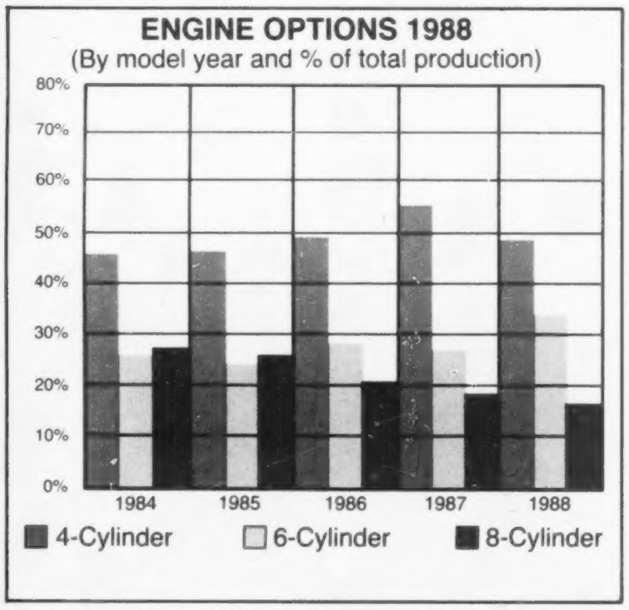
This year for the first time the Automotive News Market Data Book features option statistics on imported cars. Installation figures for imports begin on page 94.



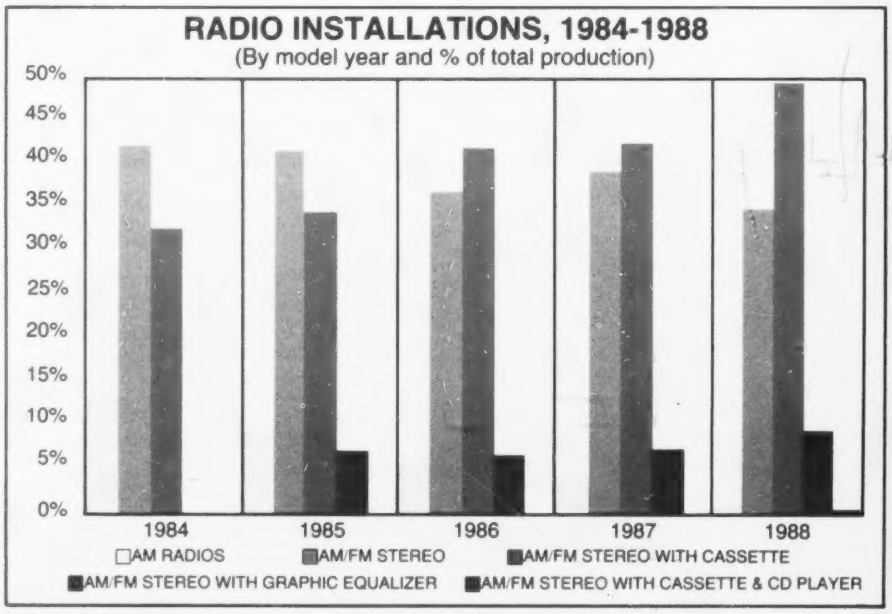
See table on page 85.



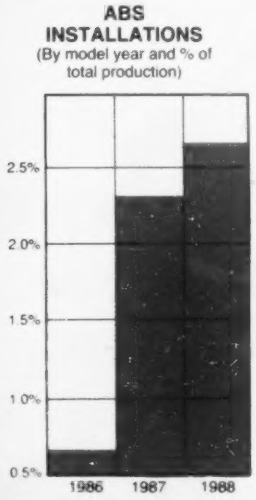
Vinyl roof installations shrank over two points in 1988. Electrical-slide sunroofs gained almost two points of total production. Factory-installed convertible roofs were more popular and accounted for more than a point of total domestic car output in 1988. See table on page 90.



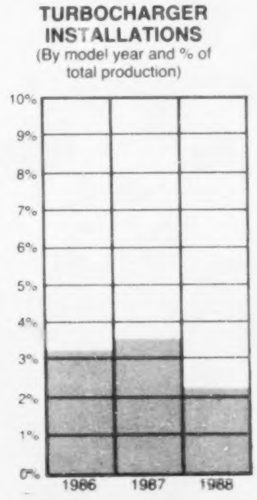
Power was on the rise in 1988. Four-cylinder engines were the choice in nearly half of the cars built in the U.S. last year; sixes were installed in over a third of the cars produced. See table on page 82.



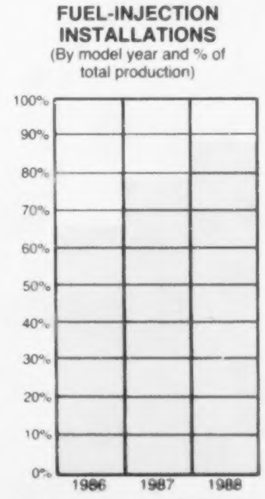
Most U.S.-built cars were equipped with stereo sound in 1988. Nearly half had factory AM/FM stereo radio and cassette decks. See table on page 86.



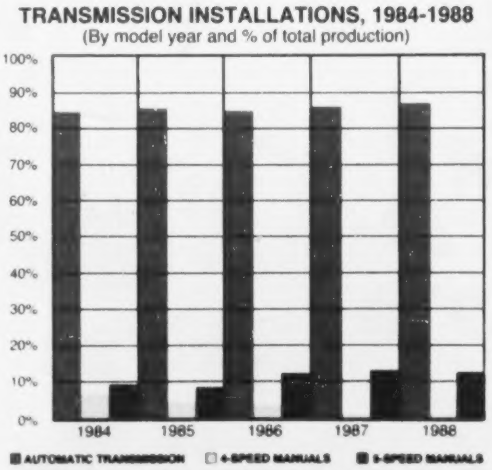
Anti-lock braking system installations rose in 1988. See table on page 89.



Turbocharger installations fell almost a point in 1988. See table on page 89.



Nearly 90 percent of domestic cars were fuel-injected. See table on page 82.



Automatic transmissions were installed in the majority of cars produced in the U.S. in 1988. See table on page 83.

DEALERS

The hottest-selling U.S. dealers of 1988

Two Ford franchises join Chevrolet store to capture top three spots

The 1988 Automotive News list of America's Largest Auto Dealers — the ranking of top-producing dealerships for the respective domestic and import franchises — includes a diverse group of businesses that excelled in one or more areas

The ranking is based on total new-unit deliveries — car and truck, fleet and retail — by individual franchise makes for calendar 1988

Many of the top-selling individual franchises — particularly among the domestic makes traditionally favored by America's fleet buyers — relied heavily on fleet sales to attain lofty rankings

Others, like the Penske organization's Longo Toyota dealership in El Monte, Calif., relied on good, old-fashioned one-at-a-time retail sales of a popular make to individual customers

The highest-volume individual franchise in the United States last year, for the second consecutive year, was Ed Morse Chevrolet, Lauderhill, Fla Dealer Edward J. Morse Jr. sold a total of 29,408 new cars and trucks last year, including 26,579 fleet deliveries and 2,829 retail deliveries The dealership also retailed 1,396 used vehicles and reported total 1988 sales of $331.2 million for all departments

In 1987, the three top total-unit producers were Chevrolet franchises, but not last year, as two Ford franchises slid in behind Ed Morse Chevrolet

In 1988, the second-highest-volume franchise was Jordan Ford of Mishawaka, Ind Last year, Jordan Ford, with big van business, reported total new-unit sales of 24,766 new Ford cars and trucks Included in that total were 13,355 fleet units and 11,411 retail units

The dealership also reported that it retailed 1,541 used units Total calendar 1988 sales for all departments at Jordan Ford were $341.6 million

The third-best-selling franchise last year was Fairway Ford of Latrobe, Pa Fairway Ford, part of the dealership chain controlled by Arnold Palmer and James O'Neal Jr., reported total new-unit sales of 23,714 Ford cars and trucks in 1988, including 23,360 fleet deliveries and 354 retail deliveries The dealership retailed 5,693 used units and rang up total sales of $317.2 million in 1988

Overall, this year's listing — the third annual — is very similar to earlier rosters Many of the perennial leaders are still at the top of the respective lists But a shifting retail landscape in the United States has affected even the largest dealerships

Since the last listing one year ago, some of the very biggest dealerships have reorganized; some have changed hands, and one stopped selling cars to go into a type of marketing hibernation as an inactive franchise until it can complete construction of new facilities

In all, 14 of the franchises that were top producers for their respective domestic divisions and importers were winners for the second consecutive year.

One dealership — Dale Oldsmobile, Bronx, N.Y., finished at the top of its make in 1986, but slipped from the Top 10 Oldsmobile dealers in 1987 only to re-emerge at the top of the Oldsmobile list for 1988

The ranks of the Top 10 producers for each of the 35 makes surveyed actually include 351 listings, including two dealerships that tied for the final "Top 10" spot for Saab In addition, one Peugeot dealer is in Puerto Rico and one Alfa Romeo dealership included in the list is located in the Canadian province of Ontario.

So there are 351 winners on this year's list, although some of the dealerships are multiple winners because they have more than one franchise that finished among the leaders for its make.

Perennial leaders still at the top—after three years

Big-volume auto dealers blossom on both coasts

The epoch of the megadealer has brought a new interest in bigness. Suppliers, manufacturers and other dealers all have an interest in identifying megadealer operations for their own business purposes, as well as charting the successes and failures of megadealers and other top-performing franchises.

In 1988, some of the highest-volume dealerships — including some that were on previous lists of top-selling franchises — flopped belly-up into U.S. Bankruptcy Court. Those dealerships, even if reorganized as going concerns, generally slipped from the ranks of the volume leaders — at least temporarily.

The failure of high-volume dealerships, even megadealer operations, demonstrates that even a superior sales performance was not necessarily enough to ensure survival in 1988.

Although there are many multi-make, chain and megadealer organizations with franchises on the 1988 Automotive News list of America's Largest Dealers, there also are small operations — some quite literally "mom and pop" operations — selling a single make in a single dealership.

The purpose of ranking dealerships by total new-unit sales — car and truck, fleet and retail — by individual franchises is to ensure that the single-make, single-point dealers can compete on level ground with megadealer operations that control multiple dealerships with multiple franchises.

In that way, the sole criterion is superior sales effort in competition with same-make dealers.

Geography and regional socio-economic factors were again important 1988, and there were no major shifts from the previous year.

Dealerships in areas with economies tied to the petroleum industry continued to face troublesome markets in the early part of the year, although in the waning months of 1988 dealers in some of the distressed areas reported some improvement.

As in 1987, there were many top-volume dealers in California and Florida as well as in the Northeast and the Washington hub on the Eastern seaboard. The top-volume franchises tended to be concentrated in the major metropolitan areas of Los Angeles, New York City, Miami, Chicago, Boston and Dallas.

The biggest import franchises tended to be heavily concentrated on the West Coast, East Coast and Gulf Coast. Top-selling domestic-make franchises generally tended to be more highly concentrated in the North and Midwest.

As in 1987, there were many top-volume dealers in California and Florida as well as in the Northeast and the Washington hub on the Eastern seaboard.

Most of the Top 25 fleet-sales leaders do business in or near areas where there is a lot of daily rental business, either for vacationers or business travelers.

Although many traditionalist new-car dealers complain that automobiles should be sold one at a time to individuals — and that the high-volume, low-gross fleet dealers are beneficiaries of factory policies that grant special pricing breaks to entice their big fleet customers — the area of the fleet deal is as intense as ever.

Among the biggest of the fleet biggies are a number of organizations that control a good portion of the business.

The Arnold Palmer organization, for example, placed three separate franchises — two of them in the same location — on the list of the Top 25 fleet sales leaders. The Ford and Lincon-Mercury franchises at the Bluffton, S.C., store both made the list, as did the Fairway Ford franchise in Latrobe, Pa.

Together, those three franchises owned and operated by Arnold Palmer and James O'Neal Jr. accounted for 38,642 cars and trucks. Other Arnold Palmer operations also traditionally emphasize fleet sales.

Prospect Motors of Jackson, Calif., which placed three General Motors franchises among the Top 10 volume leaders for their respective divsions, had two of those franchises on the Top 25 fleet list. Chevrolet and Pontiac franchises — both among the Top 25 fleet franchises — at dealer William E. Halvorson's store delivered a total of 24,345 car and truck fleet units last year.

The 25 highest retail-volume franchises included 17 domestic franchises and eight import franchises.

Colonial Dodge in Kensington, Md., and Lake Forest Chrysler-Plymouth in Gaithersburg, Md., both on the Top 25 fleet list, grew to fleet prominence under the guidance of dealer John Fitzgerald Jr.

Ed Morse Chevrolet, Lauderhill, Fla., reported the most fleet units in 1988 and not coincidentally was also the top new-unit franchise.

Dealer Edward J. Morse Jr. and his father, the second-highest-volume Cadillac dealer, also focus on fleet sales in the profitable south Florida market. Although none of the senior Morse's dealerships made the Top 25 list, they are traditionally fleet powerhouses that rank very high in divisional standings.

Only one of the 25 highest fleet-volume franchises was an import, Action Nissan of Kissimmee, Fla. The 24 domestic makes included seven Chevrolet, five Dodge, four Ford, three Pontiac, two each from Chrysler-Plymouth and Lincoln-Mercury and one Oldsmobile.

Although the big fleet dealers frequently grab top divisional honors because of the very high-volume nature of the fleet business, there are many dealers who have found a formula for moving lots of cars and trucks — with handsome grosses — by selling them one at a time.

Longo Toyota of El Monte, Calif., acquired by the Penske organization three years ago, topped the list of high-volume retail dealerships. John Clark, Longo general manager, reported that the two-wheel-drive pickup was the best selling model. Like each of the five Roger Penske dealerships — with four franchises listed among the top 350 U.S. franchises for 1988 — Longo Toyota emphasizes satisfying individual customers.

Although the top retail sales honor went to an import franchise, second and third places went to Midwestern Ford franchises. Ricart Ford of Columbus, Ohio, and Jordan Ford of Mishawaka, Ind., also emphasize customer service. Both dealerships also used vans and van conversions to augment traditional showroom sales. In addition, Ricart Ford also emphasized big-volume retail used-car sales.

In all, the 25 highest retail-volume franchises included 17 domestic franchises and eight import franchises. Ford had 11 of the top retail franchises, Chevrolet and Toyota each had six, while Honda and Nissan had one each.

There was a strong regional bias toward the Midwest, which was home for nine of the top 25 retail franchises. The West had seven — all in California — while the Southeast had five, the Northeast three and the Southwest one.

Although there is often a presumed correlation between high-volume new-unit sales and parts and service dollar volume, the two do not always relate directly to each other.

Lustine Chevrolet of Hyattsville, Md., reported the highest parts and service dollar volume for 1988: $38.4 million. Lustine, with 2,988 new-unit sales last year — 2,179 retail and 809 fleet — was not among the 10 highest-volume Chevrolet dealerships. Yet Lustine Chevrolet's parts and service dollar volume accounted for 44.51 percent of the dealerships total sales.

Continued on page 118

DEALERS

Ford had 11 of the top retail franchises, Chevrolet and Toyota each had six, while Honda and Nissan had one each.

Continued from page 116

The dealership with the second highest parts and service dollar volume — $25.2 million — was a single-line West Coast Mercedes-Benz outlet: Slemons Imports of Newport Beach, Calif. Its parts and service dollar volume accounted for 23.6 percent of total sales. Slemons Imports sold 1,312 new and 462 used units last year.

Ranking third in parts and service volume was high-volume retailer Bob Brest Chevrolet of Lynn, Mass. It reported 1988 parts and service volume of $21.0 million, or 17.8 percent of the dealership's total sales. In 1988, Bob Brest Chevrolet was the eighth-largest Chevrolet franchise with 9,921 new-unit sales, including 8,251 fleet and 1,670 retail sales.

— Edward Lapham

New-truck dealer total climbs by 338

The number of new truck dealer outlets in the U.S. increased by 338 in 1988, bringing the Jan. 1, 1989 truck dealer population to 26,359. Sixteen makers increased their dealer totals; nine showed declines; two remained unchanged.

Figures were collected from manufacturers and the American Truck Dealers division of the National Automobile Dealers Association.

	Truck Retail Outlets as of Jan. 1, 1989	Truck Sales Per Outlets, 1988	Truck Outlets as of Jan. 1, 1988*	Truck Sales Per Outlets, 1987

NOTES: Expenditures for television commercials advertising two nameplates or vehicle types have been divided between the two brands. Expenditures include leasing.

Broadcast Advertisers Reports identifies some automotive television expenditures as "autos and trucks," "various autos," "general promotion," etc. Unless they are clearly attributable to a brand, they are not included in the above, or in the truck data following, but are included in the company totals. In the January/June 1988 period, these expenditures were as follows: Chrysler Corp. $25,544,300; Ford Motor Co. $13,702,700; General Motors $1,762,100; Nissan $1,387,000; Toyota $1,614,500.

*Spot TV includes national syndication advertising.

*—Adjusted to reflect transfer of 1,310,918 window vans from passenger total.

(1)—Each year many trucks are issued passenger car license plates because of their intended use or local state laws. Beginning in 1966 VIN prefixes were used to achieve an accurate means of identifying these trucks in all states. The 1965 growth and scrappage figures have been adjusted to reflect the estimated 700,000 trucks which were selected from the passenger car file and properly counted as trucks.

(2)—Each year vehicles registered in one state to an address in a different state have been excluded from the count of vehicles in operation. Beginning in 1971 about 181,000 passenger cars registered to fleets at out-of-state addresses have been included.

NOTE: Adjustments for the absence of Oklahoma have been made where applicable.

*—Adjusted to reflect transfer of 1,310,918 window vans from passenger car total to truck total.

(1)—Each year many trucks are issued passenger car license plates because of their intended use or local states laws. Beginning in 1966 VIN prefixes were used to achieve an accurate means of identifying these trucks in all states. The 1965 growth and scrappage figures have been adjusted to reflect the estimated 700,000 trucks that were selected from the passenger car file and properly counted as trucks.

NOTE: Adjustments for the absence of Oklahoma and other states have been made where applicable.

R.L. POLK & CO. MOTOR STATISTICAL DIVISION

Major automakers' joint ventures, equity stakes with other car companies, assembly operations

United States

Chrysler Corp.
50% of Diamond-Star Motors Corp., Bloomington-Normal, Ill. Car manufacture. With Mitsubishi.
49% of Arab American Vehicles Ltd., Egypt. Jeep assembly.
31% of Beijing Automobile Works, China. 4wd vehicle manufacture.
22% of Mitsubishi Motors Corp., Japan.
16% of Maserati S.p.A., Italy. (Chrysler has option to acquire a total of 51% by 1995.)
Chrysler has announced a 50-50 joint venture with Renault to develop and produce a small sport utility in Europe and North America.

Ford Motor Co.

Trans Sport: Pontiac's entry in GM's fleet of all-purpose vehicles

GM assigns major job to minivan

Ring up 225,000 sales and lead the way in styling, plastics

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors' all-purpose vehicle represents the automaker's attempt to leapfrog its competitors in sales and styling in the fast-growing minivan market as well as advance its leadership in plastics technology in the 1990s.

Chrysler's Lutz calls GM entry a "kosher pork chop," Page 41

GM plans to sell 225,000 front-wheel-drive APVs annually. They will go on sale this summer and will be marketed as the 1990 Chevrolet Lumina APV, Oldsmobile Silhouette and Pontiac Trans Sport.

Chevrolet, which also has the only cargo version, initially will receive the bulk of APV production. Pontiac and Oldsmobile allocations will be smaller, but the eventual mix will depend on which of the three divisions has the greatest sales success.

For Oldsmobile, the Silhouette minivan is the first truck ever sold by the division. Pontiac-badged trucks were sold in the late 1940s and early 1950s.

GM expects 40 percent of all sales will be to owners of competitive makes switching from minivans or sedans to the APV.

James Westby, APV program manager, predicted the APV will carve out a new niche in the minivan market. It is targeted not only at present minivan owners but also at sedan owners who previously wouldn't have considered a minivan because of its boxy look and bouncy ride.

The APV, Westby said, provides them with a vehicle that looks good and is pleasant to drive to work every day but also can haul the kids and dog to the beach.

"Now you can combine the utility of a van with style and flair," he added.

GM's market research estimates that the minivan market will grow to more than 1 million units annually in the 1990s. In 1988, minivan sales totaled nearly 820,000 units.

Chrysler Motors, which introduced the minivan in

Lutz: Hefty hikes in 1990 prices

Dodge's Monaco returns; more V-6s

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — The launch of the 1990 model year will trigger hefty vehicle price increases at the Big 3.

Chrysler Motors President Robert Lutz said the Big 3 face federally mandated vehicle passive restraints, incentive costs, rising material prices and mounting profit-margin pressures.

In the interview, Lutz also discussed the automaker's 1990 products and said the Monaco name will be resurrected for the new Dodge model based on the Eagle Premier.

"I just think something has got to give," said Lutz, regarding the likelihood of a large price hike. "Everybody is looking at the same situation. Chrysler does not in any way lead with pricing, but my personal belief is that there will be fairly heavy pricing this year."

General Motors declined comment on 1990 model year pricing.

Philip E. Benton Jr., president of the Ford Automotive Group, said, "We haven't made that final decision at this point in time and won't until we get much closer to introduction and get more information as to cost and also what the general competitive climate looks like."

In the fall of 1989, GM raised introductory car prices 2.9 percent, Ford Motor Co. 2.6 percent and Chrysler 2.3 percent on a comparably equipped basis.

Auto analysts agree that the Big 3 will raise prices more on 1990 models than they have on models of the recent past. They expect it will be more than a 3 percent increase and possibly more than 4 percent.

They, too, cite cost pressures, including higher raw material costs and aggressive incentives, and the cost to install passive restraints.

Lutz

In addition, they say, the Big 3 traditionally has raised prices more when they anticipate lower volume than when they envision an upswing in sales.

While industry demand is weak and not expected to rise, Lutz said, "The classical economical theory of reducing price in time of weak demand only works up to a degree. In essence, the rebates are already the price cut."

Chrysler has told analysts its incentive costs rose from $650 per vehicle in the first quarter of 1989 to $800 per unit in the second quarter.

"The industry has gotten to the point where despite very heavy incentives, the American public isn't

Lexus takes low road, beats Euro pricing

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Toyota Motor Sales U.S.A. fired its first salvo in the coming luxury car war by pricing its top-line Lexus sedan $9,000 to $26,000 below its better-known and more prestigious European competitors.

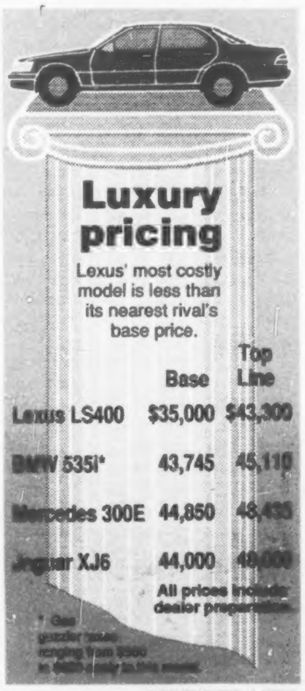
The base price of the flagship LS400 is $35,000. Although an LS400 with all available options would cost $43,300, Lexus will not produce any with a full option load for several months for the express purpose of having no car in a Lexus dealership with a sticker price above $40,000.

The smaller ES250 sedan carries a base price of $21,050. With four available options, its maximum sticker price is $23,650.

The cars go on sale Sept. 1.

Dealers welcomed the price an-

see LEXUS, page 43



Luxury pricing

Lexus' most costly model is less than its nearest rival's base price.

	Base	Top Line
Lexus LS400	$35,000	$43,300
BMW 535i*	43,745	45,110
Mercedes 300E	44,850	48,435
Jaguar XJ6	44,000	[illegible]

All prices include dealer preparation.

* Gas guzzler taxes ranging from [illegible] to [illegible] apply to this model.

Smith favors Saturn-type plant in Europe

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FLORENCE, Italy — General Motors, buoyed by new optimism about the European market and its own rising market share, wants to build a Saturn-class plant in Europe someday, Chairman Roger B. Smith said.

Smith, in Florence to address the opening of an International Symposium on Automotive Technology and Automation conference, told a press conference that GM also has considered reopening a shuttered Belgian plant to ease current capacity constraints.

He told European reporters the U.S. Saturn project is on schedule and under budget. Saturn production is scheduled to begin in Spring Hill, Tenn., late next year.

"It won't be exported to Europe in the next few years," Smith said. "Hopefully, down the road sometime, we'll want to put a Saturn type plant (in Europe), but not now."

There are no immediate plans for a new GM plant in Europe. The company's increasing share of a rapidly growing market has forced it to squeeze more capacity out of existing facilities, according to General Motors Europe President Robert Eaton, who accompanied Smith on his trip to Florence.

Smith: "As of this moment, we have no plans for any other acquisitions, but that might change tomorrow."

GM initially forecast a European car market of 12.6 million to 12.7 million this year, a slight drop from 1988's record 12.9 million. But the company now expects another record in 1989, with sales reaching 13.1 million to 13.2 million. Though several analysts have revised their 1989 projections upward, GM's forecast is the most optimistic to date.

"We see that continuing on a trend basis to around 14.5 to 15 million by 1995," said Eaton. "We're trying not only to meet that market, but to get a greater penetration."

GM last year held 10.6 percent of the West European market with sales of 1.37 million cars. But GM was at 11 percent through the first four months of 1989 on the strength of the new Vectra.

Eaton said GM started last fall with a capacity of 85 Vectras per hour and is now implementing capacity for 115 per hour and planning a further increase of 15-20 percent.

But Eaton said GM is squeezing new capacity from all of its European plants.

"There is not a single location in Europe where we are not looking at significant capacity increases," he said.

As part of his European visit, Smith inspected a shuttered Belgian plant that may soon be reopened.

Smith scheduled a visit to Antwerp, Belgium, last Friday to inspect manufacturing operations there.

Chrysler maps China gains

In-house BJ-212 planned; other vehicles on tap

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Corp. is planning to expand its operations in China by producing new vehicles and replacing the BJ-212 utility vehicle with one designed jointly with its Chinese partner.

Peter C. Badore, Chrysler Motors business development program director for Japan and China, also revealed that Beijing Jeep Corp. has invested in a second set of Cherokee dies that are being produced in Toledo, Ohio, and will be used in China. It is part of Beijing Jeep's program to increase vehicles' local content. Badore said a right-hand-drive version for export is being readied.

Badore

Chrysler owns 31 percent of Beijing Jeep, and state-run Beijing Automotive Works owns the rest.

Beijing Jeep produces the Jeep Cherokee — 5,000 units in 1988, compared to 4,500 in 1987 — and the BJ-212, a four-wheel-drive utility vehicle based on the Russian Gaz that was introduced in the 1950s. BJ-212 production in 1988 totaled 27,000, compared to 24,000 in 1987. Most of those vehicles are sold to state-run agencies and collectives.

The BJ-212 will be replaced in 1993-94 with a model developed jointly by the two partners. Badore also indicated that in five to 10 years, other Chrysler vehicles, including its van, may be built in China.

Badore said production of the Cherokee, introduced in 1986, will be increased substantially by 1995.

China's industrial and political systems are undergoing massive change as the country moves from a Soviet-style, planned economy to a state-guided, market economy, he said. And despite the recent unrest as citizens demand democratic reforms, the government is intent on pursuing its plans for economic development. Except for a one-day shutdown more than two weeks ago, the Beijing Jeep operation has been unaffected by the massive demonstrations, a Chrysler spokesman said.

"One of the state council's major priorities during this period of readjustment," Badore said, "is the development of a domestic automobile industry." He said he believes the central government will control China's budding auto industry, as well as other industries, by restricting them "to just a limited number of players (manufacturers)."

Badore said one of Chrysler's biggest advantages is that it is already in the market.

Beijing Jeep was established by American Motors and Beijing Automotive Works in January 1984. Chrysler acquired its stake when it bought AMC in 1987.

"The question for us is how large a player will we become?" Badore said.

Chrysler, now classified as one of the "Small 3" of the six major auto producers, expects to emerge as one of the top automotive manufacturers in China.

"The simplest way to define our strategy is that Chrysler doesn't look at itself as a Small 3 producer," Badore said. "We want to move from the lower tier to China's Big 3 tier of manufacturers."

In 1988, Chinese domestic manufacturers produced 647,000 vehicles, most of which were medium- and heavy-duty trucks and buses. That was 44 percent more than the 1987 volume of 450,000 units. Sales in 1988 were 687,000, up 37 percent over the 1987 total of 500,000.

The central government has chosen six companies to be part of an accelerated program to produce passenger cars.

The companies are grouped into the Big 3 — First Automobile Works, Second Automobile Works and Shanghai Volkswagen — and the Small 3 — Beijing Jeep Corp., Guangzhou-Peugeot and Tianjin Minibus.

Badore said First Automobile Works and Second Automobile Works are the largest, each producing about 100,000 vehicles, mostly trucks. Each is looking for a partner and hopes to produce 150,000 to 300,000 vehicles by the late 1990s.

Shanghai VW is building 15,000 VW Santanas annually but plans to produce 300,000 cars a year in the 1990s, according to Badore.

Chrysler sold First Automobile Works manufacturing and product technology for the Chrysler 2.3- and 2.5-liter four-cylinder engine family and 59 pieces of equipment to build the engines.

When the equipment is installed in a new engine plant to be completed by 1990, First Automobile Works will be able to produce 300,000 engines annually for use in the vehicles it manufactures, including the Audi 100 and the Nissan Cab Star, Badore said.

Beijing Jeep built 5,000 Cherokees in 1988

Beijing Jeep also is constructing an engine plant for the machining and assembly of the Jeep 2.5-liter, four-cylinder engine, Badore said. The company currently assembles that engine in limited volumes from imported parts.

Benton: Backlash from Ford's success is inevitable

AUTOMOTIVE NEWS/JOE WILSSENS

Benton and Ford under glass

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — The Bronco II has been slapped by a consumer magazine, some Ford engineers are grumbling and the company has idled assembly plants for the first time in six years.

Could the honeymoon be over at Ford Motor Co.?

Philip E. Benton Jr. laughed at the question. Yet the president of the Ford automotive group hesitates as he finds an answer.

"I don't know," he said in an interview. "I don't know.

"It is almost inevitable that there is a backlash from success, just as there is a backlash from the lack of success."

This year has held a mixture of news that Benton can live with: U.S. sales are down, for example, yet Ford's market share and corporate earnings continue to rise. And while General Motors will capture headlines with a flurry of product launches this calendar year, Ford is looking ahead to a busy 1990.

One of those products will replace the Bronco II, the sport-utility that Consumer Reports recently branded as unstable.

This spring, Ford has temporarily idled the plants that make Escort and Tempo/Topaz to help trim inventories. The closings won't extend beyond those plants, Benton said, although overtime is being reduced in some locations. Ford has enough orders to keep the rest of its assembly sites running through July vacation time, Benton said.

He is predicting a dogfight in showrooms, however, as automake attempt to clear out 1989 inventory. Benton held out little hope that the industry will be able to get along without its incentive crutch anytime soon.

"If that's the way it's going to be, we'll just have to adapt to it," he said.

see BENTON, page 42

And then a tractor plowed through the shop door

OMAHA, Neb. — A man who was upset that an extended warranty failed to cover the cost of his auto repairs apparently decided to take out his frustrations by driving a tractor through a dealership's glass service door.

It crashed through the door of Reagan Buick's service department, said Dan Rabbass, service manager. Damage was estimated at $4,000.

Jess Moore, 59, of Papillion, Neb., was arrested on charges of felony destruction of property and misdemeanor assault, according to police.

Rabbass said Moore brought a 1984 Buick into the dealership for repairs. He said repair of a leaking gasket would cost $300 to $400.

Moore was told by his insurance company, according to Rabbass, that unless he produced evidence that regular maintenance had been performed on the car, Moore would have to pay for the repairs. Rabbass said Moore became upset when he learned that his mechanical insurance policy would not cover the cost of repairs. Police Capt. William Crawford said a police report indicated that Moore "was unsatisfied at what he thought was the failure (of the dealership) to do work under an extended warranty."

Nissan executive may be next Fuji president

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Nissan Motor Executive Vice President Takuro Endo will be "loaned out" to Fuji Heavy Industries, builder of Subaru cars, as an outside member of the board.

Endo will remain a Nissan board member and retain his title as a Nissan managing director. His title at Fuji has not been determined, but news reports suggest Endo may be the next president of Fuji, replacing Toshihiro Tajima, who is expected to retire in a year.

Nissan owns 4 percent of Fuji.

Tajima's predecessor, Sadamichi Sasaki, was also from Nissan.

While at Nissan, Endo was in charge of the production operations group. In that post, he directed purchasing, production control, logistics control, distribution and production of knockdown kits for shipment overseas.

At one time, Fuji played a subsidiary role for Nissan. It produced models like the Pulsar, as well as components for some Nissan projects in the aerospace industry.

But now, the direct relationship is much more limited.

Fuji also will have another new board member from the Industrial Bank of Japan. Motomu Toshiya will join Tajima and Akira Soejima, Fuji senior managing director, both of whom are alumni of the bank.

Eiichi Ohara, the current chairman, and former Fuji president, was also from the Industrial Bank, which has a large, undisclosed stake in the company.

Fuji's unconsolidated pre-tax profit for the year ended March 31 dropped 14.9 percent to 13.8 billion yen ($97 million).

The decline was attributed to a 14.5 percent drop in exports that offset a slight gain in domestic sales.

Of the seven Japanese auto companies filing financial reports for the period ended March 31, only Fuji and Suzuki Motor Co. reported declines in pre-tax profit.

Suzuki's pre-tax profit dropped 22.2 percent to 15.7 billion yen ($110.6 million) due to a decline in exports, higher depreciation charges and expenditures needed for a major change in its lineup.

Meanwhile, Nissan Motor Co. has named four new board members and replaced 14 others. The changes bring the total number of directors to 44.

The move reduces the average age of the board members from 59 to 56 and indicates a generational change from the old regime of Chairman Takashi Ishihara to a younger group represented by President Yutaka Kume.

One of the new directors is Kousei Minami, general manager of Nissan's CR program office. CR is the code name for the front-wheel-drive van joint venture between Nissan and Ford Motor Co.

The changeover in board members will result in the retirement of three of Nissan's five executive vice presidents.

They are Zenzo Sonoda, who was in charge of product planning and marketing, design and research; Taiji Hosokawa, who headed the administration group; and Tetsuro Sato, who was in charge of domestic sales.

AUCTION DATES

Chrysler Motors

June 6 — American Auto Auction, Walpole, Mass.; Arena Auto Auction, Chicago; Nashville Auto Auction, Nashville, Tenn.; Florida Auto Auction of Orlando, Ocoee, Fla.; Portland Auto Auction, Portland, Ore.; Riverside Auto Auction, Riverside, Calif.; and Greensboro Auto Auction, Greensboro, N.C.

June 7 — A.D.E. of Birmingham, Birmingham, Ala., and Butler Auto Auction, Gibsonia, Pa.

June 8 — Northway Exchange, Clifton Park, N.Y.; Aptco Auto Auction, Taylor, Mich.; Indianapolis Auto Auction, Indianapolis; Omaha Auto Auction, Omaha, Neb.; Southwest Auto Auction, Phoenix, Ariz.; Ark-La-Tex Auto Auction, Shreveport, La.; and Amarillo Auto Auction, Amarillo, Texas

June 9 — Manheim Auto Auction, Manheim, Pa.

June 13 — Clanton's Auto Auction, Darlington, S.C.; Denver Auto Auction, Aurora, Colo.; Southern Auto Auction, Warehouse Point, Conn.; Hatfield Auto Auction, Hatfield, Pa.; South Seattle Auto Auction, Kent, Wash.; Golden Gate Auto Auction, Fremont, Calif.; and Dallas Auto Auction, Grand Prairie, Texas

June 14 — Columbus Fair Auto Auction, Obetz, Ohio; Minneapolis Auto Auction, Plymouth, Minn.; and West Palm Beach Auto Auction, West Palm Beach, Fla.

June 15 — Big Sky Auto Auction, Billings, Mont.; Fredericksburg Auto Auction, Fredericksburg, Va.; Salt Lake Auto Auction, Salt Lake City; and Metro Auto Auction Kansas City, Lee's Summit, Mo.

June 16 — St. Louis Auto Auction, St. Louis, and Tri-State Auto Auction, Cicero, N.Y.

Ford Motor Co.

June 6 — Harrisonburg Auto Auction, Harrisonburg, Va., and Bay Cities Auto Auction, Hayward, Calif.

June 7 — Concord Auto Auction, Acton, Mass.; Aptco Auto Auction, Taylor, Mich.; and Metro Auto Auction of Kansas City, Lee's Summit, Mo.

June 8 — Auto Auction of Billings, Billings, Mont.; Greensboro Auto Auction, Greensboro, N.C.; Texas Hobby Auto Auction, Houston; and Skyline Auto Exchange, Fairfield, N.J.

June 13 — Fort Worth Auto Auction, Fort Worth, Texas, and Newburgh Auto Auction, Lee's Summit, Mo.

June 14 — Atlanta Auto Auction, Red Oak, Ga.; Baltimore-Washington Auto Exchange, Baltimore; Lakeland Auto Auction, Lakeland, Fla.; and Southern California Auto Auction, Fontana, Calif.

June 15 — Ohio Auto Auction, Grove City, Ohio, and St. Louis Auto Auction, Bridgeton, Mo.

June 20 — Greater Chicago Auto Auction, Chicago; Bay Cities Auto Auction, Hayward, Calif.; and South Seattle Auto Auction, Kent, Wash.

June 21 — Northway Auto Auction, Clifton Park, N.Y.; Albuquerque Auto Auction, Albuquerque, N.M.; and Indianapolis Auto Auction, Indianapolis

June 22 — Denver Auto Auction, Aurora, Colo.; Interstate Auto Auction, Mercer, Pa.; Minneapolis Auto Auction, Plymouth, Minn.; Nashville Auto Auction, Nashville, Tenn.; Southwest Auto Auction, Phoenix, Ariz.; Skyline Auto Exchange, Chandler, Ariz.; and 166 Auto Auction, Springfield, Mo.

NOW THERE'S A PROVEN, WATER-BASED ALTERNATIVE TO PETROLEUM-TYPE AUTOMOTIVE TRANSIT COATINGS...

Having coated and protected over one million new vehicles in 1988 alone, Kats UL-3000 Protective Transit Coating has proven itself to protect new car paint against rust, solvents, acid rain, grime, corrosion and road film while in transit or storage. The modified Kats UL-3000V now offers added advantages in its performance ability:

A modified cross-link system to assure long term exposure removability.

An Ultraviolet Absorber has been combined with the Ultraviolet Blocker for added protection from damaging Ultraviolet rays.

A single application protects continuously from manufacturer to dealer.

Kats UL-3000V eliminates the need for coating removal at the Port of Entry and is removed simply and cleanly at the dealership with one single washing using Kats UL-6000+ Protective Transit Coating Remover and cold water. There is no need for super heated water, kerosene or solvents...and no need for costly separators or settling tanks.

Simplicity, economy and complete satisfaction are the rewards for using Kats UL-3000V Protective Transit Coating and Kats UL-6000+ Protective Transit Coating Remover.

Call or write today for our complete product brochure and video tape.

Car output drops 11%; trucks even

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

Memorial Day closings and shutdowns for inventory control cut last week's scheduled U.S. auto and truck production from the levels of the prior week and the year-earlier week.

Weekly auto output is likely to continue at a reduced pace this summer, as several plants will be idled for model changeovers lasting longer than the usual one or two weeks. Those shutdowns are attempts to keep inventory in line with sales.

Automakers slated production of 121,895 units last week, 17.84 percent below the previous week's 148,358 and 11.40 percent below the year-ago week's 137,579. The year-ago week was also a holiday week.

So far this year, 3,285,757 cars have been assembled, 4.69 percent more than the 3,138,419 completed last year at this point.

Last week's targeted build was shared as follows: General Motors, 47.43 percent; Ford Motor Co., 23.03 percent; Chrysler Motors, 14.44 percent; Honda of America Manufacturing, 4.96 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 2.89 percent; New United Motor Manufacturing Inc., 2.63 percent; Toyota Motor Manufacturing U.S.A., 2.06 percent; Nissan Motor Manufacturing Co. U.S.A., 1.62 percent; and Diamond-Star Motors, 0.94 percent.

Scheduled truck assembly last week totaled 73,213 units, 15.67 percent below the previous week's 86,817 and down 0.10 percent from the year-ago week's 73,284.

GM's Reatta Craft Centre in Lansing, Mich., shut down today and will remain closed until Aug. 11 for model changeover.

As reported earlier, GM's Willow Run, Mich., plant is idle for model changeover until December.

Ford closed its Wayne, Mich., plant today due to high inventory of Escort. The plant is expected to resume operations June 12. Ford's Edison, N.J., plant remains idle until June 12 because of high inventories. Like Wayne, Edison produces Escort.

Ford slated overtime last Saturday at its Wayne, Mich., truck plant.

Results mixed in Canada

Canadian automakers targeted car production last week at 22,440, up 19.91 percent over the previous week's 18,714 but down 15.51 percent from the year-ago week's 26,559.

So far this year, 437,534 cars have been produced, 15.80 percent fewer than the 519,665 completed last year at this point.

Truck output was scheduled to reach 21,347 units last week, 6.43 percent over the prior week's 20,058 and 7.64 percent over the year-ago week's 19,832.

Year-to-date, 442,466 trucks have been built, 5.40 percent more than the 419,782 assembled last year at this time.

Ozone-protecting air conditioners will require significant front-end redesign

New air conditioners will reshape bodies

By Jack Keebler
AUTOMOTIVE NEWS STAFF REPORTER

Sweeping changes in automobile front-end structure and styling will be required quickly, as state and federal governments ban automotive air conditioning systems using chlorofluorocarbons.

Car-company and refrigerant-company engineers agree that non-CFC systems will quite likely be bigger, heavier, more fuel-thirsty and more expensive than current systems using the refrigerant R-12, commonly known by DuPont's trade name, Freon.

R-12 is the current refrigerant of choice for all automobiles. But because of worldwide environmental concerns over ozone damage and global warming, a new, non-CFC cooling medium called HFC-134a has been proposed as the most likely near-term, cost-effective R-12 replacement.

Auto company experts said that they're not sure when 134a systems will be available — but that 1993 is far too soon to expect production hardware.

Vermont was the first state to ban the use of CFCs, starting in the 1993 model year. Other states appear to be following its lead.

"There are probably 18 states out there, with over 70 pieces of legislation pending, and frankly we're afraid that could mean that all of these states would have unique requirements," said Gary Clickard, a product development engineering manager for Ford Motor Co.

A survey of domestic, Japanese and European car companies confirmed that they are already conducting hot-weather, "Death Valley-style" testing on vehicles fitted with prototype 134a systems.

Because of the different chemical composition and inherently poorer heat-exchange ability of R-134a, expensive redesign challenges confront not only air conditioning-system developers but also stylists and front-end structure engineers.

Massacre in China clouds outlook for auto ventures

The future of several automotive ventures in the People's Republic of China grew more tenuous last week in the wake of the government massacre of protesters and onlookers by the People's Army.

Chrysler staff and families flee China, Page 66

Chrysler Motors Corp. and some other automakers have recalled their employees from China.

Toyota, which recently signed a long-negotiated deal to build a van in China, pulled its employees out last week.

While production is continuing in some provinces, work was disrupted at urban plants including Beijing Jeep, in which Chrysler has an interest, and Shanghai-Volkswagen. The turmoil raises questions about the future of existing projects as well as those just getting under way.

Chrysler evacuated its 13 employees from Beijing Jeep. And all Japanese companies, acting on instructions from the Japanese government, ordered their personnel out of China.

Foreign news sources estimate that thousands of civilians have been killed since the People's Army moved on Tiananmen Square on Sunday, June 4. Hard-liners in the government had gained the upper hand and declared martial law in the capital city of Beijing.

Much of the business in China is built on personal relationships, and even an established venture like Shanghai-VW could be threatened by the protests and crackdown.

The VW operation's main ally in the Chinese bureaucracy is Shanghai Mayor Zhu Rongji, a staunch supporter of ousted Communist Party leader Zhao Ziyang, a liberal who backed reforms. It remains to be seen whether that connection will hurt VW's position.

Some Western automakers with operations away from Beijing have kept their workers on the job. Volkswagen AG evacuated some employee dependents. Peugeot SA has not called on its 30 employees at Guan Gzhou Peugeot Automobile Co. to leave the country.

A Peugeot spokesman said the plant in Huang-pu, which produced about 6,000 trucks and 505 station wagons last year, is 1,200 miles from Beijing and the situation is not as critical as in the capital. He said the

'90 sales forecasts

10 predictions vary by 2.4 million units

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

Transplants move up on sales charts, Page 6

A mid-year survey of auto analysts and Big 3 forecasters reveals wide uncertainty over whether this year's sales decline will fade quietly or cascade into a larger fall through 1990.

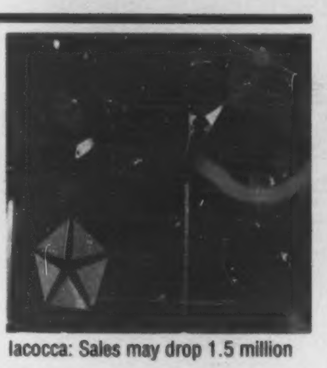
The question has become more complex because the current slump — though anticipated — has come in the face of unexpectedly strong sales incentives. In the process, the U.S. industry appears headed to fall below 15 million car and truck sales for the first time since 1984.

For 1990, two of the Big 3 automakers are already reading starkly different messages from their crystal balls.

On June 1, Chrysler Corp. Chairman Lee Iacocca told Reuters news service that sales in 1990 could drop by 1 million or 1.5 million units. "The next 18 months are going to be fairly tough," Iacocca said.

General Motors, on the other hand, believes sales could inch upward from their projected 1989 finish in the 15 million range.

So far, Ford Motor Co. isn't venturing any guesses beyond 1989. It began the year with one of the industry's rosiest forecasts — 15.4 million. After interest rates rose more quickly than expected and sales lagged, Ford scaled back its prediction to 15 million.



Iacocca: Sales may drop 1.5 million

NHTSA denies delaying light-truck safety rules

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Nineteen powerful senators have accused NHTSA of endangering lives by foot-dragging on safety standards for light trucks and minivans used as passenger vehicles.

The commerce committee's criticism of NHTSA underlines a growing concern that projects are taking longer because the Bush administration has not named an administrator who can establish priorities.

All but one member of the Senate Committee on Commerce, Science and Transportation signed a terse letter asking Transportation Secretary Samuel Skinner to mandate passenger-car safety standards for vans, pickups and sport-utility vehicles, known as multipurpose vehicles or MPVs.

The committee oversees NHTSA.

The May 22 letter demanded that light trucks have side-impact protection, minimum roof-crush resistance, head restraints, minimum stability to protect from rollovers, high center-mounted rear brake lights, and passive restraints. (See story on NHTSA plans, page 65.)

Only Sen. Wendell Ford, D-Ky., declined to sign. Ford's office had no comment.

New image helps Nissan rise at home

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Nissan Motor Co. has revamped its once stodgy image and is putting pressure on Toyota Motor Corp. and Honda Motor Co., at least in the Japanese market.

Just two years ago, Nissan was known for boring products. Now, fad-conscious young Japanese want to be seen in a Nissan car, according to analyst Stephen Usher of Kleinwort Benson International.

In a market where fads are a powerful factor, that appeal could sustain further growth for Nissan, Usher said.

After a long, slow, continuous decline, Nissan is finally seeing an upswing in its share of the Japanese market. For the first time in eight years, Nissan is making gains — at the expense of Toyota and Honda.

Nissan has been conducting an aggressive sales campaign since January, right through what was supposed to be a slow period as consumers put off car purchases in anticipation of lower taxes that went into effect April 1.

In the first five months of this year, Nissan gained 1.2 percentage points in market share to 24.5 percent, while Toyota lost 1.2 percentage points to 41.6. In that five-month period, Honda was down half a point to 7.3 percent.

Honda's youthful image gives it a greater presence in the market than its sales figures would indicate.

Market share is usually an important concern for Japanese companies. And movement in share is painstakingly slow. Honda Director Takashi Matsuda said it can take three to five years to see a change of only one or two points.

But Matsuda minimized the importance of market share. He said Honda has set a target of 685,000 sales for this year, an increase of 11 percent. Hitting that target is Honda's goal, regardless of what Nissan does, according to Matsuda.

Koji Mitani, Toyota assistant general manager for domestic planning, acknowledged that Nissan may be on the up side of a cycle, and Toyota and Honda on the down side. But he said it is "only a cycle, not a trend." A cycle, according to Mitani, could last about a year.

Nissan's upswing in market share does not mean Toyota and Honda are hurting. But it does mean Nissan has been outperforming its rivals. In May, the overall market showed a gain of 21 percent. Toyota's sales were up 20.6 percent; Honda's sales climbed 21.8 percent; and Nissan's sales rose 24.9 percent.

Part of that increase can be attributed to a new generation of products introduced by Nissan in the past year, while Honda and Toyota have had fewer new-product launches.

In April, the first month of the new tax program that was expected to lead to increased sales, Honda Prelude sales were off 16.6 percent to 4,081 units compared to 6,513 for Nissan's recently restyled Silvia (240SX).

One analyst said the raft of new models has generated a "halo" effect around the Nissan name. Usher said Nissan is now popular and Honda finds itself competing against the whole company's image and not just new models like the Silvia.

Restyled Skyline is one of the models leading Nissan's surge in Japan

GM fights lessors on overseas sales

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — As its North American-built cars become more popular overseas, General Motors is cracking down on U.S. lease companies that use fleet discounts to sell cars below wholesale price to overseas dealers.

GM officials estimate that as many as 25,000 North American-built GM vehicles a year are sold overseas outside official channels — through brokers or the gray market.

Dale R. Hermiller, executive in charge of GM's international export sales, said overseas brokering activity is "out of hand" in some markets, and the group has asked GM's car divisions for help in locating lease companies and brokers involved.

Lease companies using their fleet discounts to sell to overseas dealers or their U.S. brokers are in danger of losing their fleet discount privileges with GM, according to Hermiller.

GM is also advising its U.S. dealers not to sell to brokers who export to countries where GM has franchised dealers. Dealers who continue to sell to exporting brokers may lose their GM franchises.

"We've reported 1,500 vehicles (through vehicle identification numbers) in the last year," said Hermiller, who added that GM car divisions were asked to help with the brokering effort about six months ago.

"I think the fact that we've checked up on that many cars lets the dealer network here (in the United States) know someone is watching," he said. "It's kind of like that fear of an audit."

GM sources said many of those

see GM LEASE, page 65

New GM vehicles to go overseas quickly

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Overseas customers will be able to purchase new North American-built General Motors vehicles in the next year not long after they are introduced in the United States.

GM is rolling out its new North American-built products in some overseas markets almost simultaneously with their introduction at home, according to Dale R. Hermiller, executive in charge of GM's international export sales.

● Chevrolet's super-high-performance Corvette ZR-1 is scheduled to debut in Europe in the first quarter of 1990, just months after its planned U.S. introduction in the fall of 1989.

● Trans Sport, Pontiac's plastic-bodied minivan, will appear in Europe in the first quarter of 1990 after it is introduced in the United States in the fall of 1989. Pontiac also will send its four-door Grand Prix to Europe this fall. GM has no current plans to offer the Oldsmobile or Chevrolet all-purpose vans overseas.

● Chevrolet's four-door Blazer will debut in late spring 1990 in Europe following its spring introduction at home, Hermiller said.

Both the Trans Sport and the Blazer could be launched in other markets, such as the Middle East and Taiwan, if GM finds a demand for them.

● The redesigned Chevrolet Caprice will debut early next spring in overseas markets, primarily the Middle East where full-sized American cars have traditionally sold well. The Middle East will also get the four-door Grand Prix in the first quarter of 1990.

GM also is expanding its overseas dealer network. It plans to add 30 to 40 outlets in the next year, mainly in Europe.

Nissan will promote Infiniti as no-option car

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

VICTORIA, British Columbia — Nissan Motor Corp. in U.S.A. will market the Infiniti Q45 sedan and M30 coupe as no-option, fully-equipped cars when they go on sale Nov. 8.

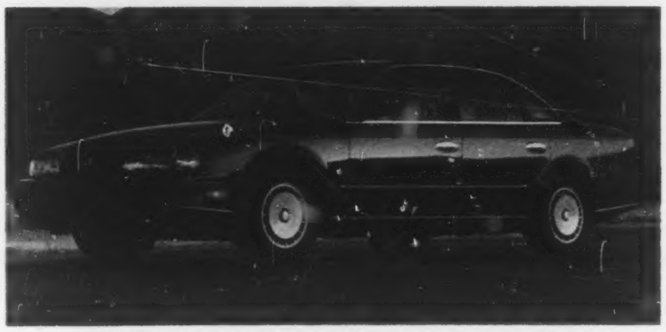
Besides dealer-installed options of compact disc players and cellular telephones, the only option on either car will be a Q45 touring package with Nissan's Super HICAS four-wheel-steering system, tighter suspension and different alloy wheels and tires.

Pricing won't be announced until September, but the Q45 base will be very close to $40,000 — or just under that figure if the current yen-dollar exchange rate holds — and the M30 will be "in the mid-$20,000s."

That puts the flagship slightly above Toyota's base price of $35,000 for its Lexus LS400 flagship sedan and almost even with Jaguar's XJ-6 (its closest competitor from a styling standpoint), which now is offering a $5,000 rebate on a $44,000 price tag.

The Infiniti two-door M30 differs from the four-door Lexus ES250, and it will be slightly more expensive than the $21,050 Toyota.

But Lexus' 10 extra-cost options on the LS400 and four on the ES250 add significantly to their prices. The ES250 stops at $23,650, still the M30's likely price, but the top-line LS400 can be optioned up as high as $43,300. Lexus is already so conscious of this that for several months it will not ship to any dealer an LS400 with options that push the sticker past $40,000.



A base price of roughly $40,000 is expected for Infiniti's flagship, the Q45

In a test ride here, the Q45's riding qualities reflected the attention Nissan engineers paid to European luxury cars such as BMW 735i, Mercedes 300E and 420SEL and Jaguar XJ-6. The long wheelbase and rigid structure of the design produce a stable, comfortable ride, with no discernable driver fatigue during a four-hour drive. Steering is precise, accurate and surprisingly crisp for a 3,860-pound car.

The 4.5-liter, 32-valve V-8 engine is quiet and vibration-free. Peter Harris, Infiniti's corporate product development manager, said the engine, based on normal manufacturing averages, will produce 278 horsepower and 292 pounds-feet of torque. The four-speed automatic transmission will let the engine wind out to 6,500 rpm before shifting under full throttle.

The M30, which is based on the Japanese-market Leopard coupe, retains much of that car's Japanese styling and proportions. Front and rear legroom and headroom are limited. Headroom problems are compounded by a standard power sunroof.

Mounted on this five-year-old chassis are several newer technological features including a suspension that automatically adjusts to changing road conditions. The key ingredient is Nissan's ultrasonic sonar system that "reads" the road surface ahead. Combined with sensors that measure steering, throttle and suspension travel, it automatically adjusts the shock absorbers to one of three settings for varying conditions. On the test drive, the system worked smoothly and almost imperceptibly.

Power is from a 3-liter V-6 that produces 162 hp and 180 pounds-feet of torque.

Transplants climb on U.S. sales charts

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

May sales of cars and light trucks in the United States slipped 1.15 percent below last year's strong performance despite heavily reinforced incentives and one extra selling day.

The sole bright light was a 1.21 percent increase in sales of cars built in the United States. And that was due chiefly to big improvements in sales of cars built by the non-traditional U.S. plants — the Japanese transplants and joint ventures — although General Motors sold a handful more domestic cars than in May 1988.

In contrast, import-car sales fell 3.54 percent, and light-truck deliveries were off 0.06 percent for domestics and 20.45 percent for imports.

Transplants of Honda, Toyota and Mazda led the increase in car sales for May. Mitsubishi set an any-month sales record, thanks to Eclipses from its Diamond-Star Motors joint venture with Chrysler Corp. Mitsubishi's combined transplant and import-car sales were up 76.43 percent over May 1988.

Nissan's transplant car sales lagged, but its combined import and domestic car sales were up.

Transplants and joint ventures have been steadily increasing their sales in the United States, and in May they accounted for 9.95 percent of the cars sold in this country. That was up from 7.42 percent last year.

Nearly three times as many of the cars built by those plants are sold through import-car networks as through domestic outlets. In May, for example, Japanese-branded cars built in the United States accounted for 70,942 sales, while 25,577 cars built at joint-venture plants were sold as Fords, Eagles and Chevrolets.

In an industry in which one percentage point of market share is worth billions of dollars in sales, the 2½-point gain by the transplants is noteworthy. It came at the expense of the Big 3's traditional plants, whose share was down about 1½ points, as well as imports, which were down more than one point from May 1988.

Transplants will continue to gain market share, according to most industry analysts, because their car and light-truck production capacity will grow. The Philadelphia-based research firm Autofacts Inc. projects transplants' current capacity of 1.5 million units (without overtime) will grow to 2.4 million units annually by 1992.

Analysts say there is a chance for the Big 3 to recover some unit sales, but it is going to be tougher for them to sustain market share because of what the analysts call further "dilution in the market." The transplants are extending a dilution process that began years ago when the imports became a major factor in the U.S. market.

"It's three companies against 33," explained Joseph Phillippi, a Shearson, Lehman Hutton analyst,

Associates buyer still being sought by Paramount

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Paramount Communications is moving closer to the sale of its giant Dallas-based finance company, Associates Corp. of North America.

Associates is the parent company of Chicago-based Associates Commercial Corp., the largest independent financing company in the heavy-truck field.

Since April, Paramount, formerly known as Gulf + Western, has been soliciting bids for Associates through New York investment banking firm Lazard Freres, and appears close to accepting one of those bids.

The company said proceeds from the sale of Associates would be used to expand Paramount's communications operations globally, both internally through product development and externally through acquisitions and investments.

Paramount would not disclose exactly how close it was to a decision on the sale. "It's progressing," a spokesman said.

Last week Paramount made a $10.7 billion tender offer bid for Time Inc. The sale of Associates could help fund that unfriendly takeover attempt.

Meanwhile, the proposed merger of Time Inc. and Warner Communications, announced in March, is still pending.

Associates, valued at between $2.5 billion and $5 billion, is the third-largest independent finance company in the United States behind General Electric Capital Corp., Fairfield, Conn., and Household Finance Corp., Chicago.

Auto finance giants General Motors Acceptance Corp. and Ford Motor Credit Co. are among the companies that financial analysts believe could be potential suitors.

Though GMAC and Ford Credit last week declined to comment on their interest in Associates, some financial analysts rank the two auto finance companies high on the list of potential buyers.

Frank Prezelski, financial analyst with Deutsche Bank Capital Corp., New York, said "with GMAC and Ford you're clearly looking at companies that are used to financing trucks."

If GMAC were to acquire Associates it would produce less of a conflict of interest than for Ford, he added, because Ford still produces and sells Class 8 heavy trucks. GM has dropped out of heavy-truck production, though it has a venture with Volvo, called Volvo GM Heavy Truck.

Associates provides supplementary financing through manufacturer agreements with all heavy-truck manufacturers and their dealers, excluding Mack Trucks, Allentown, Pa.

It also provides financing for medium-duty manufacturers like Nissan Diesel America and Mercedes-Benz Truck, plus retail financing for fleet and independent truck operators.

In addition to the two captive auto finance companies, other likely suitors are GE Capital, Sears, Roebuck and American Express, according to sources in the financial community.

Associates is currently in the process of transferring Associate Commercial's headquarters from Chicago to Dallas, including the transfer of 110 managers.

Associates had assets and receivables in excess of $13 billion for its fiscal 1988 year ended Oct. 31. Last week, the company reported record earnings of $152 million for the six months ended April 30, 1989, up 17 percent over the same period last year.

Reece A. Overcash Jr., Associates chairman and chief executive officer, said both consumer and commercial lending operations had gains over last year.

The company reported revenue of $1.1 billion for the six months, up 19 percent from $960 million last year. It reported gross finance receivables of $14.0 billion, up about 16 percent from the year-earlier period.

Commercial finance gross receivables, the bulk of which are in heavy-truck and trailer financing, totaled $6.1 billion on April 30, up 11 percent from $5.5 billion a year earlier. Commercial finance volume for the period was $3.1 billion, up 11 percent over last year.

In the past two years Associates has acquired the finance companies of the heavy-truck industry's two largest trailer manufacturers. In 1987 it purchased Fruehauf Finance Co. from Fruehauf Corp., Detroit. In 1988 it acquired Great Dane Finance from Great Dane, Savannah, Ga.

GE Capital expands in auto field, buys Transamerica finance firm

GE Capital Corp.'s acquisition last week of Transamerica Automotive Finance Corp., based in Chicago, for an undisclosed amount means the company is continuing to stalk the automotive industry for likely candidates to strengthen its automobile dealer services business.

Transamerica, which has assets of $300 million, provides floorplanning and other financial services to about 300 auto dealers throughout the nation. The operation will be consolidated into GE Capital Auto Financial Services.

GE Capital's goal is to become the largest non-captive lender to auto dealers in the United States, according to company officials. The company, based in Stamford, Conn., provides auto dealerships with floorplanning, real estate and capital loans, leasing services, auto auction services and dealership acquisition financing.

The finance giant provides floorplanning to about 85 auto dealers, according to information it filed with the Securities and Exchange Commission last year. The company also makes loans to automobile leasing companies secured by their inventories.

Its real-estate financing includes dealership acquisitions.

Transamerica Automotive Finance Corp. is a subsidiary of Transamerica Corp. It was the former owner of Budget Rent a Car Corp., which it sold to a private investment group in 1986.

156 counts in odometer fraud case

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Bill Nuckolls, auto wholesaler and part-owner of the Orange County Auto Auction in Orlando, Fla., said he cooperated with a state task force for more than a year in its probe of odometer tampering in Florida.

Nuckolls says he gave the attorney general's Odometer Fraud Task Force every scrap of information it asked for about the auction and his other business, Bill Nuckolls Cars.

Then on May 16, the requests stopped. Florida Department of Law Enforcement agents and Florida Highway Patrol troopers raided Nuckolls' Orlando used-car office and arrested him on charges of selling more than 100 cars with rolled-back odometers.

Last week, Nuckolls was arraigned in Orange County Circuit Court and pleaded innocent to 156 felony counts associated with odometer fraud.

The state says the cars were sold to 12 new- and used-car dealerships in Florida and Georgia, and the dealers may have to reimburse their customers.

Nuckolls is part-owner of the auction with Southeast Toyota Distributors, distributor for Toyota Motor Sales U.S.A for Florida, Georgia, Alabama, North Carolina and South Carolina.

Southeast Toyota owns 50 percent of the auction and plans to build at least two more — in Fort Lauderdale, Fla., and Atlanta — with Nuckolls.

Nuckolls said his relationship with Southeast Toyota is unchanged.

He faces life imprisonment if convicted of the charges, which include 103 counts of grand theft, seven counts of forgery, seven counts of title fraud, 36 counts of odometer fraud and one count each of racketeering, conspiracy to racketeer and organizing a scheme to defraud. He was released on $25,000 bond.

Troopers also arrested six associates and employees of Nuckolls on charges related to odometer fraud.

Bob Leventhal, Nuckolls' attorney, said Nuckolls is a victim of the task force on odometer fraud. Leventhal said the task force was funded 15 months ago by the federal government and was running out of money without any indictments.

"The arrests were made for the 6 o'clock news," he said.

According to Leventhal, the state had promised that Nuckolls would be given a chance to answer any charges before arrests were made in exchange for his cooperation.

"We didn't even get a phone call they were coming," he said.

Simultaneous to the criminal charges, the attorney general filed a civil racketeering complaint in Orange County Circuit Court seeking to seize title to four parcels of property owned by Nuckolls. Those include Bill Nuckolls Cars, Dan-Lyn Motors and the now-dissolved Crystal Auto Sales. The property has been appraised at more than $1.2 million.

In 1981, Nuckolls pleaded guilty to three counts of odometer tampering. It was only a misdemeanor at that time.

TRUCK INDUSTRY

May sales pep up, but trail 1988

The tempo of light-truck sales picked in May, but the total still fell short of last year's record.

Heavy incentive activity brought May sales of 442,365 in the United States, 3.36 percent below last year's peak of 457,727 for the month.

May represented a strengthening of the sales pace which, for five months of the calendar year, was down 4.17 percent from 1988's level: 1,991,497 compared to 2,078,060.

Ford, Chevrolet and Jeep rebounded sharply in May, each topping its year-earlier performance. Chrysler, GMC and the imports fell below last year's sales.

Isuzu and Range Rover continued to buck the import trend with sharp year-to-year increases.

Penetration of the light-truck market by foreign-based manufacturers dropped to 11.48 percent in May from 13.93 percent a year earlier.

The importers captured 13.18 percent of the market in the first five months of this year, down from 14.34 percent during the same period a year ago.

Full-sized pickups rebounded sharply in May and continued to be the major driving force in the truck market. They accounted for 30.02 percent of total industry sales in May, up from 26.58 percent in 1988.

Ford, Chevrolet, GMC and Dodge retailed 132,833 full-sized pickups in May, 9.16 percent more than last year's 121,685.

Ford and General Motors are the big guns in that segment. Each sold more than 50,000 full-sized pickups in May.

Dodge, however, continued to languish in that all-important market class with sales of 7,850 units, down from 8,345 a year earlier.

Big-truck worlds vary

U.S. market looks strong; Europe is iffy

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Despite a potential sales downturn later this year or early next year, the long-term outlook for the U.S. heavy-truck industry in the early 1990s is strong.

But the European Common Market integration in 1992 is likely to cause a major shakeout and a sharp decline in sales similar to that following deregulation of the trucking industry in the United States in the early 1980s.

Those are some of the highlights of a major new study of the heavy-truck market by the Deutsche Bank Group of New York. The study is entitled "The Global Market for Trucks and Truck Components."

The study calculated that, on the basis of a U.S. fleet of 1.2 million Class 8 vehicles, with a vehicle life of about 10 years, replacement demand is 120,000 units a year. The need for growth is calculated at 2 to 3 percent a year, adding 24,000 to 36,000 units annually.

That suggests the true base level of U.S. demand for heavy-duty trucks is about 150,000 units annually, comparable to the 148,361 Class 8s sold in 1988.

Additionally, deregulation and a reduction in the overall total aged the fleet so that an estimated 300,000 vehicles now are more than 10 years old and should be retired, the study said.

Deregulation aged the fleet by reducing operators' profit margins and forcing them to keep trucks in service longer than normal.

If there are tougher new federal requirements for performance and safety, many of those will "likely be ruled off the road by government fiat," further bolstering demand, the study added.

The study noted that the uniqueness of each geographical truck market is such that there is no significant foreign competition in sight for the U.S. heavy-truck market and only minimal competition for the medium-duty market.

It pointed out that the shakeout in North American truck manufacturers is just about completed. Barring poor management, it is unlikely that any company in the United States will approach bankruptcy.

But for the near term, the study sees the possibility of a downturn. Separately, a recent slowdown in new-vehicle orders for production during the next few months has begun to confirm that.

Meanwhile, Deutsche Bank's study also noted that European truck demand is currently strong, with most manufacturers operating at or near capacity.

Compared to the United States, manufacturers have been better able to raise prices, enabling them to boost profits significantly.

European heavy-truck demand is being affected by:

- Changes in the truck operating environment, leading to greater growth in two segments of the long-haul market. The trend is toward larger vehicles with more powerful engines — the exact opposite of U.S. trends. It is also toward smaller medium-sized vehicles for local hauling in contrast to the United States where the trend is toward either very small vehicles or larger medium-sized vehicles.
- Changes in sizes of fleets. European distributors are very small by U.S. standards. After 1992, there could be a major move to large pan-European fleets. That would affect the European manufacturers' pricing position, which is current much stronger than that of their U.S. counterparts.
- As noted, 1992 should see an end to highly regulated markets, bringing an upheaval similar to that experienced in the United States. Currently, it is virtually impossible for haulers to compete outside their home markets.

Iveco North America stands pat, won't import new European line

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Iveco Trucks of North America officials said they have no plans to bring to the United States the Daily/TurboDaily models, designed for European driving conditions and requirements.

Larry Snover, senior director of marketing services for the firm, which is based in Blue Bell, Pa., said that if fuel prices were to rise sharply in the United States, there would be heightened interest — possibly strengthening Iveco's North American diesel lineup.

But officials feel that, for the foreseeable future, the EuroTurbo 12-11 and 12-12 four-cylinder diesel-engine aftercooled models adequately fill their North American market requirements.

Separately, James C. Underwood, senior vice president of sales, said that, despite introducing new four-cylinder models in 1989, "We are going to maintain our six-cylinder engine, which is a premium product we've always had in this country."

He characterized the new four-cylinder as "just another niche that we can address in Class 3."

Underwood said that Iveco Trucks of North America also wants to "concentrate on continuing to build a strong dealer base and allow our dealers to make money with their franchise."

Although it has limited information, the company said dealers had one of their best profit years in 1988.

Iveco has about 200 sales and service dealers nationally. It doesn't anticipate increasing that number in the coming year.

The company is also going after the rail chassis market a little more aggressively. With its 10,000-pound GVW chassis, it is looking at the walk-in van market, characterized by bread and bakery trucks, as another opportunity.

It is also beefing up support for its stripped rail chassis. It has an agreement with Utilimaster Motor Corp. of Wakarusa, Ind., to build on its rail chassis. Grumman Olson of Sturgis, Mich., is also producing some units for fleet orders, and an agreement with another Western U.S. body builder is being established.

TRUCK BRIEFS

New Eaton brake

GALESBURG, Mich. — Eaton Corp.'s axle and brake division expanded its line of Extended Service brakes with the addition of an ES-165 heavy-duty brake.

Eaton's ES line is designed to provide extended service life in over-the-road and on/off-highway applications.

It is available with a fabricated shoe design for 23,000- to 26,000-pound gross axle weight rating applications and in a severe-duty design with a cast shoe for both on- and off-highway applications of 26,000 to 30,000 pounds gross axle weight rating.

Retarder market up

INDIANAPOLIS — The growing truck and bus retarder market in the United States generated $135 million sales in 1988, according to a study by Global Trade Consulting of Indianapolis.

Retarders are widely used in trucks and buses to save wear and tear on brake systems, provide smoother stops and additional safety by preventing overheated brakes.

Global Trade estimated that 75 percent of all trucks and more than 50 percent of all buses have a retarder of some type.

The company researched four types of retarders. All can be installed in either trucks or buses, but each type is popular in a specific application.

The most popular is the engine retarder, used primarily on Class 8 trucks and also on highway buses. Other types include electromagnetic retarders and hydraulic retarders, popular on metropolitan buses, and the exhaust brake retarder. It is typically used on Class 8 trucks but with less frequency than the engine retarder.

Idealease grows

CHICAGO — Idealease, like many other truck rental and leasing companies, has been profiting from the strong Class 8 market and the steady trend toward more rental and leasing activity.

Bill Kennedy, president, said he expects members to show a net increase of 1,000 new trucks and tractors in their fleets this year.

Idealease was formerly owned by Navistar International and was designed to help Navistar dealers who lease and rent trucks. It recently became autonomous.

Kennedy, a former vice president of sales for Navistar, joined Idealease last June.

Idealease now has 210 members with 340 outlets. Some 99 percent are Navistar dealers, though it has begun taking on non-Navistar dealers for the first time "in those areas where we don't have representation," Kennedy said.

Idealease members have 11,000 trucks and tractors in service. Kennedy said members will put 3,000 new units into service this year. He expects Idealease members to have 12,000 units in operation by the end of the year.

Rockwell axles

TROY, Mich. — Rockwell International Corp.'s automotive operations added more axle models to its Carrier Exchange Program to increase selling flexibility for North American truck dealers.

The program allows truck dealers to change Rockwell axle carriers in their new-truck inventories to match virtually any truck operator's axle-ratio specifications.

The program now covers 14 axles.

The new RS-160- and 180-series single-drive axles and RT-145- and 160-series tandem axles are the newest models in the program.

Guzzlers face high tax in Ontario

By Alex Law
STAFF CORRESPONDENT

TORONTO — Canada's largest province, Ontario, is imposing a gas-guzzler tax that will add $3,500 ($2,900 U.S.) to the price of some new cars.

The tax, which takes effect July 1, is the most severe of a series of tax changes enacted by the province that make buying and operating a car more expensive.

The gas-guzzler tax is based on fuel economy, specifically, the number of liters of fuel it takes to travel 100 kilometers (62.5 miles), according to government estimates. Minivans, pickups and other trucks are not affected by the tax.

If a car requires 9.5 to 12 liters of gasoline to travel 100 kilometers on the highway (25.0 to 19.7 mpg), a $600 ($497 U.S.) tax is levied. If the car requires 12.1 to 15 liters (19.6 to 15.7 mpg), the tax is $996 ($825 U.S.).

Cars consuming 15.1 to 18 liters (15.6 to 13.1 mpg) to travel that distance are taxed $2,200 ($1,822 U.S.), and those using more than 18 liters (13 mpg or less) pay $3,500 ($2,900 U.S.). There is no tax for cars consuming less than 9.5 liters per 100 kilometers.

Ontario accounts for about 45 percent of the cars sold in Canada. Canadian car sales totaled 1,049,898 units last year.

Importers of European cars are among the hardest hit by the tax.

John Arnone, a Jaguar Canada spokesman, said, "We're very disappointed. It came as a great shock to us. Now we have to ask our customers to pay an additional premium. We must respond to this. An impact study is currently under way. It's difficult to say what the result will be."

In addition, effective in May, all new tires purchased in Ontario are subject to a flat $5 tax. Nick Hall, General Motors' manager of media relations, said the tire tax will cost the automaker $6.7 million ($5.5 million U.S.) annually.

Approximately 80 percent of Canada's auto industry is located in Ontario.

The province raised the motor fuel tax one cent a liter last January and plans to boost it another one cent a liter Jan. 1, 1990.

Sales dip ends in Canada; deliveries rise 8% in April

By Bill Vance
SPECIAL CORRESPONDENT

TORONTO — After three months of decline, Canada's new-car and truck sales rebounded in April.

Combined domestic and imported vehicle sales were up 8.79 percent over April 1988, though sales for the January-April period remained 3.84 percent below the year-earlier total.

Ford of Canada posted an April truck record with sales of 15,548 domestic units including vans and minivans. General Motors of Canada had its best truck month ever, selling 19,908 domestic and imported trucks.

While most truck importers registered a sales decline, Mazda and GM were up sufficiently to boost total import truck sales 13.27 percent over April 1988.

Car sales also were a bright spot in April, as domestically built cars climbed 13.36 percent, a 10,000-unit rise. Combined domestic and imported car sales improved 10.16 percent over the year-earlier month, but car sales were off 4.74 percent for the January-April period.

General Motors led with a 14.28 percent sales increase. Chevrolet Cavalier/Pontiac Sunbird sales were up 62 percent, and Cadillac Fleetwood/DeVille models rose 76 percent.

GM credited its low-interest-rate finance program for picking up what it believes is a basically sound market.

"Our 9.9 percent financing program is proving to be very successful as buyers are finding excellent values at GM dealerships," said Bill Atkinson, vice president of sales, service and marketing.

"This certainly is evidence that the underlying demand remains fundamentally healthy when interest rates are at an affordable level," Atkinson said.

Udo Kaul, Ford of Canada's vice president of general sales, echoed that sentiment.

"Since the beginning of the year, all indicators have told us there remains inherently strong demand for new vehicles — if consumer apprehension about interest rates were addressed," Kaul said. "Now that we have low-cost finance rates in place, we have erased the consumer's only objection to buying now in the springtime, our busiest selling season."

Ford's interest rates were as low as 8.9 percent on some vehicles, and the automaker offered a $300 rebate on its best-selling Tempo/Topaz models.

"Extra-value" packages, with savings as high as $2,743 on Escort and Aerostar models, helped boost sales, Kaul said. Escort sales were up 67 percent over April 1988, while Ford's total domestic-car sales were up 11.47 percent.

Chrysler's domestic-car sales were up 4.46 percent over April 1988.

Imported cars managed to gain, although not as much as domestics. Import sales were up 988 units compared with April 1988 for a 2.97 percent rise, led by the captive imports of the Big 3.

Chrysler's import sales were up 165.75 percent, while Ford was ahead 150.17 percent. GM was up 65.38 percent, and Toyota, 34.45 percent.

Nissan Maxima tops Power's new car quality survey

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

A new J.D. Power survey ranks the Nissan Maxima the least troublesome new car on the U.S. market, replacing last year's least troublesome model, the Toyota Cressida.

The 10 top cars on the list, ranked by number of complaints per 100 new owners during the first 90 days, included two Buicks, two Toyotas, two Mercedes-Benz models, two Subarus and one Ford.

The initial quality survey covered 24,300 new car buyers contacted by J.D. Power and Associates.

The marketing firm noted a 12 percent improvement in quality among 1989 models for the industry in general, based on the data. Industry-wide, 153 problems were reported per 100 new owners of all makes, down from 174 last year.

Japanese import models continue to fare the best on the survey. Japanese carmakers average 114 problems per 100 new buyers this year, down from 144 last year, a 21 percent improvement.

Although European imports continue to do the worst, those models showed the greatest improvement this year. Last year, European cars logged 258 problems per new owner. This year, the number is down to 204, the report said.

Domestic carmakers recorded 163 problems per 100 new buyers, down from 177 last year.

The survey results are slightly different when measured by nameplate. Despite the high incidence of problems with European manufacturers collectively, Mercedes-Benz and Porsche individually scored as the two most trouble-free nameplates on the market.

The marketing firm does not release the names of models that fare poorest in the survey. Bill Fleming, the author of the study, did say some of the most troublesome models from 1988 had shown dramatic improvements.

The survey asked about 12 major areas of potential problems.

Electrical and accessory problems were cited most frequently by owners. Problems with exterior paint and molding ranked second, followed by "squeaks and rattles" and engine problems.

J.D. Power and Associates, based in Agoura Hills, Calif., conducts the survey of initial quality level annually and publishes the results in its monthly marketing publication, The Power Report.

Mirror inventor tries aftermart

The inventor of a bifocal mirror that eliminates the driver's left-side blind spot is taking the aftermarket route to introduce it.

Ray Kesler, 51, of North Hollywood, Calif., has spent some 20 years developing mirrors. Last year, he received assurance from NHTSA that his most recent version complied with federal motor vehicle safety standards.

Vehicle makers have failed to buy the item, although several continue to express interest. So, Kesler said, he turned to the aftermarket, had a stick-on version manufactured of glass and aluminum in Taiwan and received his first shipment in May.

A driver using Kesler's convex Target Eye mirror sees a red circle. When a vehicle appears in the circle, it is in the blind-spot danger zone.

Because aftermarket items such as this don't fall in NHTSA's bailiwick, that agency's approval has become moot unless a vehicle builder becomes interested in using the reminder item, Kesler said.

Car inventories drop to near-ideal 67 days

By Kathleen Hamilton
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Both import and domestic car companies whipped their inventories into better shape during May. As a result, June opened with nearly ideal stockpiles, equivalent to a 67-day supply of new cars in this country.

The June 1 stockpile of domestic cars rose to 1,844,144 units from 1,835,840 on May 1. But domestic cars were selling faster than the inventory was rising, so the domestics opened June with a 67-day supply of cars at dealerships, enroute to them or at factory lots. On May 1, the stockpile was equivalent to a 69-day supply.

Import-car inventories totaled 661,545 on June 1, equivalent to a 66-day supply, compared to 698,896 units, or a 72-day supply on May 1.

Mitsub[illegible] more than kept pace with the [illegible] doubling of its daily selling rate during May, as it increased production at its new U.S. plant. Its combined inventory of U.S.- and foreign-built cars was 61 days on June 1 compared to 59 days on May 1.

Other imports trimmed their inventories significantly the way that automakers like best: by increasing their sales rates during the month. Those included Audi, Volkswagen and Sterling. Suzuki's change in its sport-utility number was chiefly the result of shipment changes, although its car-inventory dip was the result of both better sales and fewer arrivals on U.S. docks.

The light import-truck inventory rose in units and days' supply compared to May 1. There were 171,393 unsold new import-trucks in inventory on June 1, an 81-day supply, compared to 169,354, or a 76-day supply, on May 1.

Combined inventories of import cars and light trucks were 832,938 vehicles, or a 69-day supply, on June 1, compared to 868,250 vehicles, or a 73-day supply, a month earlier.

Each of the Big 3 increased its sales rate and sliced inventories a bit during the month. Combining their inventories of U.S.-built cars with their captive imports, GM sliced its days' supply from 78 days to 72; Ford Motor Co. cut its level from 72 to 71, and Chrysler Motors cut its figure from 77 to 76.

At GM, Buick Riviera's climb in inventory was due to a slower sales rate. The extremely high inventory of Cadillac Cimarron is explained by its lame-duck status.

At Ford, the inventory increases on Thunderbird, Continental and Lincoln were due mainly to sales decreases rather than production increases. On the other hand, Tracer and Mark VII improved inventory by improving sales.

GM LEASE

FROM PAGE 3

brokers/exporters are on the West Coast and purchase inventory from distressed dealers at dealer cost.

Other brokers involved in supplying overseas markets purchase vehicles from lease companies that received fleet discounts on GM vehicles. Discounts vary by model and the size of the fleet order. The exporter then sells those vehicles to both GM and non-GM dealers overseas.

Brokering has been more acute in such areas as Taiwan and Scandinavian countries. GM said half of its vehicles sold in Taiwan are sold outside the GM distribution system. Some 39,000 GM vehicles were sold in Taiwan in 1988, 19,500 of them outside the GM system. Officials say they hope to reduce that share to one-quarter within the year.

GM sold 72,830 North American-built vehicles through its traditional overseas distribution channels last year. Hermiller projects GM will sell 100,000 in the 1989 calendar year, excluding the gray market.

Hermiller said cars sold outside the GM distribution system overseas do not have the appropriate warranties and are often sold by non-GM dealers, which undermines the value of the GM franchise.

GM international export sales officials have been cooperating with governments of countries in which there is heavy brokering. In Taiwan, for example, some brokers are declaring vehicles at values below their real value to avoid tariffs equal to 42.5 percent of the landed value of the vehicle, GM said.

GM also is stepping up its marketing efforts to protect GM franchise holders overseas. Within 90 days, GM will launch an advertising campaign in Taiwan that will promote the value of buying a vehicle from an official GM dealer.

The ads, created by McCann-Erickson of Troy, Mich., encourage customers to look for such things as GM dealership uniforms and signage.

GM also is implementing a new sign program worldwide that will identify stores as authorized GM dealerships. The new signs will be placed first in Taiwan. GM has been unable to stop non-GM dealers from using its present logo. The new signage and logo will be copyrighted.

"Going after anyone who copies that sign will be part of the strategy," Hermiller said.

In some instances, GM has changed its pricing strategy. In markets where there is heavy brokering, GM will try to keep its prices to dealers competitive with those of the brokers. In some cases, GM has reduced prices to dealers to discourage brokers selling fleet-discounted vehicles.

Hermiller said the brokers who sell GM vehicles in overseas markets are not usually big brokers but are small operators who find short-term opportunities and leave once the manufacturer becomes more established in the market.

"We're new kids on the block in the Taiwan market . . . so there were a lot of entrepreneurs, much as there were in Europe and the Middle East," said Raymond H. Koenig, director of strategic planning for public relations for GM's international export sales.

Added Hermiller: "Once we decide to beef up our efforts, the parallel guys will go somewhere else."

SAFETY

FROM PAGE 1

Diane Steed, who became a lame duck with the election of George Bush, stepped down last month. The president has not sent the name of his nominee for administrator, retired Army Gen. Jerry R. Curry, to the Senate commerce committee for confirmation.

A NHTSA official said the concern is unwarranted.

"Our being without an administrator has made no difference whatsoever. It hasn't resulted in things lying around," said Barry Felrice, associate administrator for rule-making.

Felrice said standards are delayed when NHTSA decides more research is needed or when budget restraints permit engineers to work on only a few projects at one time. Often rules proposed by NHTSA are held up for months in final reviews by the secretary of transportation or the Office of Management and Budget, Felrice said.

The light-truck safety rules are the latest target of discontent with NHTSA. They are among 105 unfinished rules that are more than a year old. About 15 of those rules have been kicking around NHTSA for more than five years. Several, including upgrading passenger-car side-impact standards, are more than 10 years old.

At his confirmation hearing, Skinner had promised to clear up the backlog at the agency. But at a recent meeting with reporters, Skinner admitted little progress had been made.

Major crises, such as the Alaska oil spill, have demanded the secretary's attention, and Bush has not nominated replacements for administrators in any of the nine agencies he oversees.

In April, Bush announced he intended to nominate Curry to succeed Steed. A White House spokesman said the nomination "is in the works."

Meanwhile, Curry is a consultant at NHTSA, but has no power to make decisions. Curry has made his priorities clear. He wants car safety standards applied to light trucks.

The senators' letter did not blame the slow movement on the lack of an administrator. But in April, the committee wrote deadlines for the completion of safety rules into a bill that would authorize NHTSA's budget through 1991.

NHTSA strongly opposed the deadlines and said research and rule-making would take longer than the senators wanted to allow.

NHTSA expects to release roof, side-impact, head-restraint rules

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Anti-lock brakes, rather than standards for stability or crashworthiness, may be the way to prevent a light-duty truck, minivan or sport-utility vehicle from rollover, said Barry Felrice, NHTSA's associate administrator for rule-making.

In defending the agency's recent record of rule-making, Felrice said NHTSA expects to issue several safety rules for multipurpose vehicles by year's end: mandated head restraints, side-impact protection and minimum roof crush-resistance standards.

But he said research suggests that rollover standards may not be needed.

"We've seen that a lot of vehicles skid first, then roll over," Felrice said. "We may not need crash-worthiness if you can avoid injury in the first place" through anti-lock brakes. The rollover research is expected to be complete next spring, Felrice said.

NHTSA is not expected to recommend center high-mounted brake lights on trucks, vans or sport-utility vehicles. Felrice said research has shown that brake lights may be more effective on the sides of a high-riding vehicle.

NHTSA issued passenger-car regulations in the early 1970s. Truck regulations did not begin to emerge until 1978, Felrice said.

Since 1979, NHTSA has required light trucks, minivans and sport-utility vehicles to have collapsible steering columns, interior padding, locking steering columns to discourage theft and hydraulic brakes.

Last November, NHTSA published a notice of proposed rule-making, the second step before a rule is written, for rear-seat shoulder belts in trucks, minivans and sport-utilities. A final rule is expected within several months.

A final rule on head restraints was to be issued this spring, rather than late summer as now expected, but eight months passed before approval was granted last December by the Office of Management and Budget, Felrice said.

The budget agency could not see any economic benefits in mandating a device that prevents only whiplash, not fatalities, Felrice said. Former Transportation Secretary James Burnley had to fight to get the rule released before he left office, Felrice said.

That kind of delay often bottlenecks a rule and gives the impression that NHTSA is at fault, Felrice said. Typically, it takes NHTSA between two and three years to issue a rule.

But developing and upgrading car side-impact standards has taken more than a decade because NHTSA had to spend years to study the forces involved in a crash and develop a test dummy, he said.

*—U.S.-built Volkswagen models sold after June 30, 1988, are included in import totals.

FROM PAGE 6

referring to the number of world companies angling for a bigger share of the U.S. pie.

The recent strength of the dollar against the yen gives importers a lot more room to bargain, get more aggressive with incentives and make an effort to penetrate the daily rental market, he said.

Jack Kirnan, auto analyst for Kidder, Peabody & Co., said a turning point in market share repositioning may have been reached.

"Several months ago, we were convinced the U.S.-based companies would hold on to market share," he said. "The dollar-yen relationship has changed. The dollar will move lower between now and the end of the year, giving the Japanese more time to adjust to the higher value of their currency. In the near term, it gives them lots more to spend on incentives."

Honda, Toyota and Nissan together took 18.82 percent of the U.S. car market in the first five months of this year compared to 16.51 percent last year. They are fighting for 25 percent, Phillippi said — Honda has targeted 10 percent of the U.S. car market, Toyota wants 8 percent and Nissan's goal is 7 percent. Those numbers include transplant and import operations.

The transplants' gains will be at the expense of both imports and the Big 3, predicted Michael Luckey, an independent auto analyst in Cresskill, N.J.

"If you look ahead a few years, there will be a dramatic change," he said. "Import sales will fall further, and more and more Japanese products will be built here."

Regional shifts in buying patterns will continue, analysts said. The Big 3 will continue to lose their grip on their traditional strongholds like the Midwest or Southeast, they predicted.

MARKET SHARES, May 1989

	Total Sales	Pct. of Total
SUBCOMPACT	96,017	9.90
COMPACT	180,131	18.57
INTERMEDIATE	311,928	32.14
STANDARD	118,531	12.22
SPECIALITY	3,871	0.40
IMPORT	259,737	26.77
TOTAL	970,215	100.00

"General Motors, for example, has lost five points in the Midwest and four points in the Southwest since 1985," Kirnan said.

He sees Big 3 market share "drifting downward but not catastrophically. Over the next couple of years, we might be looking at a 30 percent foreign car and truck share vs. a 27 percent share" today, he said.

Some of that new growth will be in light trucks, Kirnan and other analysts said. Isuzu is about to join Nissan in building trucks here; Toyota and Mazda all have definite plans to begin, and Subaru and Nissan are studying the prospect of U.S.-built minivans, which are classified as trucks.

Thomas F. O'Grady, president of Integrated Automotive Resources in Wayne, Pa., foresees a bigger drop in the Big 3 share of the U.S. car market. He predicted it will drop nearly 6 percentage points by the end of 1991.

April's and May's heavy doses of incentives could not heal the wound in vehicle sales for the first five months of 1989.

Year-to-date sales were 5.67 percent below the first five months of 1988. Combined U.S. car and light-truck deliveries were 373,921 units short of last year's first five months.

In terms of market share, the eight U.S. carmakers, including the five transplants, took 72.81 percent of all U.S. car sales in the first five months. That was up a half a point from 72.33 percent in the equivalent 1988 period. Import cars accounted for 27.19 percent of all car sales vs. 27.67 percent last year.

Winners in market share were the major Japanese automakers with their transplants and Ford Motor Co.

The five Japanese companies with transplant or joint-venture operations here — Honda, Mazda, Mitsubishi, Nissan and Toyota — captured 22.24 percent of the first five months' car sales. That was 2.72 percentage points more than last year's 19.52 percent.

Among the Big 3, only Ford improved its share of the U.S. car market in 1989. Including its captive imports and Probes built by Mazda, Ford's share rose more than a point, to 22.78 percent.

In the first five months, GM's share, including captive imports, fell 1.42 percentage points to 35.71 percent. Chrysler's car share declined 1.08 points to 10.71 percent.

Major five-month losses were sustained by European and Korean companies. They gave up a total of 1.50 percent of the car market compared to 1988.

There were more losses than gains among imported cars in May.

Volvo and Volkswagen were the only European car companies to report gains in May. Among the Japanese imports, Honda and its upscale Acura Division reported sales increases as did Nissan, Mitsubishi, Daihatsu and Chevrolet's captive Spectrum and Sprint.

For the month, combined domestic and import car sales totaled 970,215. That was off 0.11 percent from May 1988.

The daily selling rate in May was 37,316 units, down 3.95 percent from last May's rate of 38,850, even though May 1988 had one less selling day and much lighter incentives.

GM was the only one of the Big 3 to report an improvement over May 1988 sales, but it was a meager gain of 0.10 percent.

FORECASTS

FROM PAGE 1

Among 10 analysts surveyed at the end of 1988 and again last week by Automotive News, the range of forecasts for 1990 is even wider. At the low end is a prediction of 12.8 million vehicle sales and a recession by David Healy of Drexel Burnham Lambert. At the other extreme, Arthur Davis of Prescott Ball & Turben forecasts 15.2 million sales.

A larger group in the middle believes the industry will fade still further from last year's mark of 15.8 million cars and trucks, the second best on record. Collectively, the 10 analysts predict 14.2 million car and truck sales next year, down from an expected 14.8 million in 1989.

The first half of 1989 has made the analysts, as a group, look like capable fortune tellers.

At the start of the year, the consensus was that a tighter money supply and higher interest rates would bring a much-needed slowdown in economic growth. Auto sales would slip in the process.

By and large, that's been the case. A number of additional factors — ranging from debt-ridden consumers to the declining age of the average American car — have also been blamed for the sales slowdown.

Analysts also predicted that interest rates would begin to fall in the second quarter. Last week's drop in the prime rate to 11 percent proved them on target again.

Along the way, some of the more bullish forecasters have lowered their projections. With that, each of the analysts and the Big 3 are now predicting that 1989 will finish between 14.7 million and 15 million units.

"We projected a pretty soft landing, which would improve the chances of gaining economic and market strength next year," said David Munro, senior corporate forecaster at GM.

"And while earlier in the year we weren't so sure it was going to happen, it's coming out exactly as forecast so far," Munro said.

GM started the year predicting 15 million sales and has held to it. Next year's sales are expected to fall in the same range, too, Munro said.

Prescott Ball & Turben's Davis bases his optimism for 1990 on the premise that the industry will succeed by using shorter, punchier incentives to draw buyers into showrooms.

He believes GM will take the lead this summer by offering more cash for shorter periods of time — and on fewer cars — to prod buyers because deals on the cars they want won't last long.

The offers will target specific regions of the country that need the most help, he said. That tactic will work to GM's advantage, Davis believes, because GM's size and dealer penetration gives it a superior grasp of the needs of regional markets.

Those efforts as well as new product offerings from the Big 3 will help boost industry sales to the 15.2 million mark next year, he predicts.

At the opposite end of the spectrum, Healy contends the market is hungover from six strong sales years. Next year is shaping up as payback time, he said.

The year will see higher interest rates, slower economic growth and nearly 2 million fewer sales than this year, Healy predicts.

Despite the range in forecasts, the analysts agree on one point: incentives have become as much a fixture in the auto industry as tires and gasoline.

And several believe incentives will become more inviting as automakers search for ways to attract jaded customers in a crowded marketplace.

"We think there are going to be some new and some very creative incentives to hold the line on sales," said William Pochiluk, president of Autofacts Inc., a forecasting firm based in Paoli, Pa.

Autofacts research shows that incentives are 40 percent less effective today than they were three years ago, Pochiluk said.

As a result, Pochiluk predicts manufacturers will wrap such goodies as car phones or travel vouchers into their incentive packages in an effort to make consumers wide-eyed again.

Others argue that there's little else automakers can do that they haven't done already. As Iacocca said, "When you're offering zero financing already, the only thing we could do is send a credit to their house."

In general, analysts expect the economy to be flat or slightly weaker through the end of the year. Jean-Claude Gruet at UBS Securities said consumers have been shying away from showrooms because of higher interest rates, concerns about the economy and their own debt loads.

"As more people become convinced that we are unlikely to have a recession in 1990, that marginal improvement in confidence plus lower rates will be a slight positive for demand."

Gruet predicts a soft landing for the economy in 1990. Michael Luckey, of the Michael Luckey Consulting Group, meanwhile, has charted a mild recession.

"Inflation and interest rates haven't hit their cyclical peak yet," Luckey said. "When they do, that usually spells trouble for the economy."

In addition, Luckey believes that cuts in federal defense spending plus tax increases at the state and local level will further strain economic growth.

Jack Kirnan, auto analyst at Kidder Peabody, sees a couple years of disappointing news ahead. One omen is in used-cars, where the market has been flooded after six years of strong new-car sales as well as by large volumes of nearly new product coming out of fleet use.

During the first four months of 1989, the average late-model used-car prices declined $144 to $431, or 2.03 to 3.92 percent, according to CCC Information Services, a Chicago-based data services firm.

"When you get a weakness in used-car prices, that is usually a harbinger of weak new car sales," Kirnan said.

Trade-in customers are getting less for their cars, which forces them to cough up more cash for a downpayment or finance a larger amount, Kirnan explained. That's a combination many households can't afford, particularly those that have seen house payments rise from adjustable-rate mortgages. If they do buy a car, he said, they'll be more inclined to pick a used car.

Analysts have found few surprises in the list of market-share gainers and losers so far this year. "It's sort of been like watching paint dry," said Ann Knight of Paine Webber.

Among imports, the car-share gains of less than a percentage point by Nissan, Toyota and Honda were expected. Those makers have been aided by the dollar's gain in strength versus the yen, which has helped them avoid price increases.

Some analysts had expected GM to gain market share in 1989 and therefore have been surprised to see the No. 1 automaker lose ground.

Several analysts said GM will get a push from the new Lumina sedan, while GM's new line of minivans is expected to help on the truck end. But this year's sluggish start may postpone GM's hopes of reversing its market-share slide in 1989.

Another mild surprise has been Hyundai. The Korean maker has coughed up 1.5 points of market share as sales have declined by nearly a third from year-ago levels. Hyundai's established model, the Excel, has been hurt by overall weakness in the subcompact segment.

Analysts pointed out that buyers in this end of the market tend to be the first to draw in their purse strings when there are concerns about the economy. They have also been affected by banks' tighter lending policies.

Analyst Maryann Keller of Furman Selz Mager Dietz & Birney suggested that the segment itself isn't very attractive. Ford's Escort and Chrysler's Omni/Horizon series, for example, are a decade old and have lost some of their appeal.

"The cars one notch up are so much nicer," said Keller. "The consumers are making a very rational judgment."

JAPAN

FROM PAGE 3

That image is built not only on introducing all-new models like the Silvia, 300ZX and Skyline (a stylish upmarket coupe and sedan), but also on risky limited-run boutique models like the Be-1, Pao and S-cargo, which resemble old toy cars.

The Be-1, introduced in 1987 and limited to production of 10,000 units, was a runaway hit and now sells on the used-car market for double its original price of $8,500 to $9,500.

Earlier this year, Nissan decided to come back with the Pao, a successor to the British Mini-inspired Be-1. It took orders for only three months and sold 51,657 of the cars, which were priced at $11,080 to $12,380. Even before the order books were closed, a Pao sold at an Osaka auction last March for $15,503.

But Toyota and Honda said they have no intention of chasing Nissan. They have their own product plans and said they will stick to them. But Nissan has definitely had an impact on the market and is a factor to consider.

While Toyota and Honda minimize the importance of market share, Nissan makes no bones that share is the name of the game. President Yutaka Kume has set a goal of 25 percent share by the end of the year and 30 percent by the early 1990s.

Nissan's major sales campaign in the months preceding the April tax change was launched in large part to gain market share. Yasuhiko Misaka, Nissan general manager for sales promotion, said an important factor for the company was March sales, the last month of the fiscal year, which would determine the share for the year.

Brand loyalty is a factor in 60 to 70 percent of sales in Japan, Misaka said, indicating that the company believes what it can pick up now is a key for the future. Nissan's target for January-March was to double orders. It actually booked 230 percent more orders than a year earlier.

While Nissan was pushing sales through dealer discounts, Toyota and Honda did not follow.

The result is declining market share for Toyota and Honda. And despite the new Integra and an all-new Accord slated for autumn, some analysts are predicting a difficult year for Honda in the Japanese market.

That might give Nissan a window of opportunity, the analysts add, that could last as long as a year before new Toyota and Honda models can make inroads into Nissan's gains.

Analyst Koji Endo of Nomura Securities said Nissan's upsurge at the expense of Toyota and Honda "certainly isn't forever." Endo said it should continue through the first half of the year, and possibly for the whole year.

Nissan executives, on the other hand, expect the window to remain open longer, perhaps two years, given the fact that it takes most Japanese automakers at least three years to bring a new product to the market.

While Nissan has found success with niche vehicles, Toyota has greater sales power, Misaka admits, and therefore Nissan must strengthen its sales organization. It will continue to consolidate those gains by seeking specific targets.

Truck output at May peak of 392,946

By Karen Detkowski
SPECIAL CORRESPONDENT

U.S. truckmakers set a production record for May with 392,946 units, surpassing the previous May high of 370,140 last year.

Meanwhile, car production was the highest for any month in 1989, but slightly below May 1988.

Last month's truck production was up 6.90 percent from April's 367,592 and 6.16 percent from the year-ago month.

Truckmakers built their two-millionth truck of 1989 last Wednesday, a week ahead of 1988.

Last week's scheduled production of 91,197 units was 25.12 percent above the previous week's 72,887 and 5.53 percent above the year-ago week's 86,420.

The 681,261 passenger cars built in May were up 6.92 percent from April's 637,187, but down 1.59 percent from 692,247 in May 1988.

Last week's targeted car output of 140,945 was 15.53 percent over the previous, holiday-shortened work week's 121,995. But it dipped 17.00 percent from the year-ago week's 169,807, even though several plants were down last year for model changeover.

Last week's scheduled car production was split as follows: General Motors, 44.99 percent; Ford Motor Co., 23.29 percent; Chrysler Motors, 14.47 percent; Honda of America Manufacturing, 5.50 percent; Mazda Motor Manufacturing U.S.A. Corp., 3.14 percent; New United Motor Manufacturing Inc., 2.84 percent; Nissan Motor Manufacturing Corp. U.S.A., 2.34 percent; Toyota Motor Manufacturing U.S.A., 2.32 percent; and Diamond-Star Motors, 1.11 percent.

The Pontiac Grand Prix line at GM's Fairfax, Kan., plant closed last week for 30 days for model changeover. GM's Doraville, Ga., plant closed last week for 25 days to add a four-door version of the Oldsmobile Cutlass Supreme.

Ford's Edison, N.J., plant closed May 22 to reduce inventory of the Escort, resumed output last week.

Ford's Wayne, Mich., plant is slated to resume output today after being idled to cut inventory.

Trucks at peak in Canada, too

Canadian truckmakers produced an all-time May high of 90,661 trucks last month, beating last May's record of 80,443 by 12.70 percent. Production was 9.88 percent above April's 82,509.

Last week's targeted truck output of 18,791 dipped 2.74 percent from the previous week's 19,321 and was 6.47 percent below the year-ago week's 20,091.

May car output totaled 91,762, up 7.59 percent from April's 85,286 but 17.12 percent below the year-ago month's 110,719.

Automakers' scheduled production of 19,759 units last week was 13.90 percent below the previous week's 22,950 and 27.34 percent below the year-ago week's 27,192.

Ford Motor Co.'s Oakville, Ontario, plant resumes output today after being closed for a week by problems in the paint operation.

NADA considers starting finance company

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

The National Automobile Dealers Association and investment banker First Boston Corp. are studying a plan that could create a $2 billion finance company for NADA members.

The feasibility study was authorized by the NADA board of directors at its June meeting in New York last week.

"This is an opportunity to harness the horsepower of the entire dealer body," NADA President Ron Tonkin said. "The size would be staggering."

He said the finance company eventually could provide retail and wholesale financing plus capital loans to dealers.

He added that the study will determine if NADA can feasibly add another division, NADAF — for NADA Finance.

Tonkin, the outspoken leader who has confronted the factories on a variety of dealer-related issues since he took office in February, said the finance company would be a division of NADA, owned and operated by dealers.

It would be similar to the current $2.5 billion National Automobile Dealers Insurance Trust and the $1 billion National Automobile Dealers Association Retirement Trust.

No fireworks as NADA nominates leaders, Page 3

The financial horsepower would come from individual dealer investments, Tonkin said. A $5,000 investment by each of 20,000 dealers would yield $100 million in capital that could be leveraged at a 20-to-1 ratio, using a variety of financial instruments, he said. "That would give us $2 billion from day one."

MIATA

Mazda sports car priced at $13,800

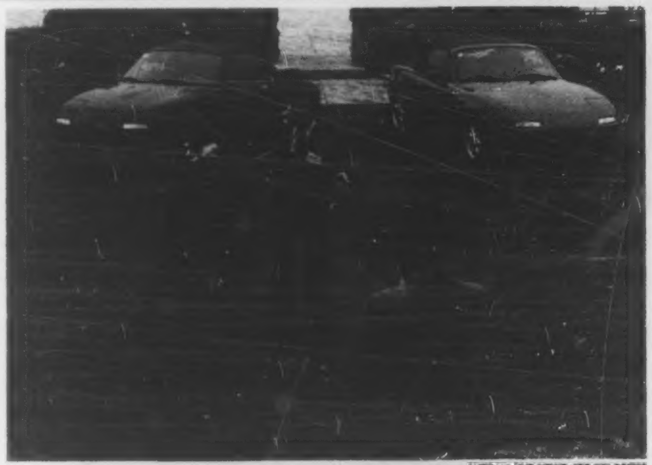
By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

Mazda Motor of America set a $13,800 base price for the 1990 MX-5 Miata two-seat convertible, establishing the sports car as "a symbol of Mazda's direction for the future."

The 2,180-pound vehicle will be marketed as an affordable sports car when it goes on sale July 1, positioned at the bottom end of the sports-car segment below the upscale Mazda RX-7, said George McCabe, deputy general manager and group vice president, sales and marketing for Mazda Motor of America.

Mazda ponders second channel for U.S., Page 6

But dealers may be poised to capitalize on the limited number of cars, only 20,000 for the balance of the calendar year, that Mazda plans to import. Eventually, the company is projecting annual sales of 40,000.



AUTOMOTIVE NEWS/JOE WILSSENS

Yoshinori Taura, center, president of Mazda Motor of America, chats with designers and product planners at the Mazda MX-5 Miata teleconference.

Dealers contacted said they expect to get $1,000 to $2,000 over sticker for at least the rest of 1989 because of limited supply and high consumer interest. All were enthused about the $13,800 base price.

"We have 27 pre-sales with deposits," said Dan Powers, Mazda sales manager at Jim Finney Pontiac-Mazda-GMC in San Diego. "There's always one or two dealers that won't add a pack, but almost every Mazda dealer around has a lot of pre-sales. The prices are certainly within market values — there's nothing like it on the market."

Zivee Calof, Mazda sales manager at Alex Satin Oldsmobile-Mazda in Los Angeles, said, "The trend is for most dealers to put a pack on it. The phone is ringing off the wall about it already. The only problem is going to be getting enough of them."

Jeep-Eagle dealers flay model sharing

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — Angry Jeep-Eagle dealers, charging that Chrysler Motors management is diluting the Jeep image, have demanded a meeting with Chrysler Corp. Chairman Lee Iacocca.

The Jeep-Eagle National Dealer Council expects to meet with Iacocca within weeks, according to dealer sources.

The council will ask Iacocca to overturn a decision allowing sale of two Jeep-Eagle vehicles through the Dodge dealer network. The council will ask that the Eagle Premier sedan and the upcoming Jeep ZJ sport-utility vehicle remain exclusive to the Jeep-Eagle franchise.

In a recent interview, Chrysler Motors President Robert Lutz acknowledged the concerns of the Jeep-Eagle dealers, who had enjoyed an upbeat relationship with management since the 1987 purchase of American Motors by Chrysler.

Chrysler has said Dodge will sell a version of the Premier called the Dodge Monaco beginning in the mid-1990 model year.

In addition, Dodge will receive a version of the new "aero" Jeep Cherokee, code-named ZJ, when the sport-utility bows in 1992.

"The consensus of the dealer advisory board is to go to the man (Iacocca) and see if we can keep our products," said a dealer source. "Any dealer council would do this to protect its franchise. Any time you spread the butter, it gets thinner."

A Chrysler spokesman said he was unaware of any meeting scheduled between Jeep-Eagle dealers and Iacocca except the 1990-model announcement show in Reno, Nev., Aug. 18. But dealers said they have been told a meeting is planned, possibly in July.

Dealers are concerned about the sale of Monaco by Dodge, but they are particularly incensed over sharing the ZJ. The ZJ was initially developed at AMC as a replacement for the Cherokee. But in December, Chrysler approved a product plan calling for retention of the

CAFE crisis: Ford to count big cars as imports

The 23-mpg Mercury Grand Marquis and Ford Crown Victoria are 90 percent domestic now, but Ford will import 25 percent of the content in 1991.

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — Saying it is choosing the least onerous of options, Ford Motor Co. will boost the offshore content of two large car models to qualify them as imports under federal fuel economy rules.

The replacements for the current Ford Crown Victoria and Mercury Grand Marquis will have less than 75 percent North American content when they go into production in early 1991, said David Kulp, Ford's manager of fuel economy and compliance. That compares to about 90 percent currently, he said. As a result, some U.S. and Canadian suppliers will lose business.

Low fuel prices and strong sales for large cars in the face of increasing corporate average fuel economy standards are behind the move, Kulp said.

CAFE was rolled back to 26 mpg in 1986 by the Reagan administration and remained at that level until the current model year, when it was set at 26.5 mpg, 1 mpg below the congressionally enacted 27.5 mpg. The Bush administration has set CAFE at 27.5 mpg for the 1990 model year.

Under those rules, domestic makers divide their cars into two separate fleets: one for cars with at least 75 percent North American content, the other for those with less. The requirement is designed to prevent companies from using captive imports to meet CAFE and to encourage domestic small-car production.

Ford, for example, has an estimated 1989 model year fuel economy average of 26.6 mpg for its domestic passenger fleet, just 0.1 mpg over the standard, according to NHTSA figures. Its imported fleet has an estimated fuel economy average of 32 mpg for 1989.

The imbalance helped prompt Ford's decision to shift the Crown Victoria/Grand Marquis from the domestic side to the import side of the ledger.

The next-generation Crown Victoria and Grand Marquis, codenamed EN53, is scheduled to go into production in early 1991 at Ford's plant in St. Thomas, Ontario. The current

NADA picks '90 slate, gives Tonkin confidence vote

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — The National Automobile Dealers Association board nominated an unopposed slate of officers for 1990 and unanimously supported incumbent president Ron Tonkin in a vote of confidence at a board meeting here last week.

Tonkin immediately claimed the action of the 75-member board as an endorsement of his confrontational approach to relations with car manufacturers.

Ray Green, a Jacksonville, Ill., dealer and NADA first vice president, was nominated as the sole candidate for the one-year term as president, virtually assuring his election in October.

Frank R. Anderson Jr. of Raleigh, N.C., the NADA treasurer, was nominated as first vice president, which puts him in line to succeed Green in 1991. Mark S. Herrmann of Yonkers, N.Y., Region I vice president, was nominated as secretary.

Tonkin hailed the unopposed slate of candidates as evidence of continuity at NADA, especially in contrast to his hard-fought struggle for the first vice president's post in 1987 against three other candidates.

"It's gotten back to me that the manufacturers are going around telling people that my views really don't represent the views of dealers in the country at large; that I won't be around much longer; that it'll all be over once I'm gone. Well, it's not going to go away that easily," Tonkin said, following the board meeting.

Tonkin, a Portland, Ore., megadealer with 14 franchises in 10 stores, said he was "overwhelmed by this mid-year, unanimous vote of confidence. I damn near fell over."

Tonkin said there was even some sentiment to draft him for a second term, "which would have violated the NADA by-laws and

Rocky, a sport-utility vehicle, and a new four-door Charade join Daihatsu's 1990 lineup.

Rocky and 4-door lift Daihatsu's hopes

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

LOS ALAMITOS, Calif. — Daihatsu America will start marketing in earnest this fall with an expanded product line, said Executive Vice President C.R. "Dick" Brown.

A new four-door Charade, which gives Daihatsu a second body style for its car line, and the Rocky sport-utility vehicle will join the lineup in October.

"Now we can fill up a showroom," Brown said.

Brown has maintained that advertising only a three-door body style for Daihatsu's single subcompact Charade model is inefficient. The problem eased somewhat this spring when Daihatsu added an automatic transmission.

"Before, if your advertising brought four subcompact prospects into a showroom, two wanted a four-door sedan, one three-door buyer wanted an automatic and only one wanted what we had," Brown said. This fall "our advertising can be more effective. We and our dealers will be much more aggressive."

Daihatsu currently has 230 dealers in 12 Sun Belt states.

Initial shipments to dealers this fall will favor four-door models until supplies of both body styles are balanced. Daihatsu expects the mix of four-door and three-door Charades to be about equal, or about 10,000 units apiece if its export allocation stays at 20,000 a year.

But Brown thinks Daihatsu's fortunes will be improved even more by the arrival of Rocky, which as a light truck is not subject to Japan's car export quotas and is projected at 30,000 units a year.

Rocky is a little larger than the Suzuki Samurai and will be positioned above it and closer to the Suzuki Sidekick-Geo Tracker.

The U.S. Rocky is based on a new-generation Rocky II recently introduced in Japan.

Rocky's wheelbase is 85.6 inches with an overall length of 145 inches. Height is 67.7 inches. Overall width is 68.2 inches, including fender extensions that cover a 58-inch track widened for extra stability.

The two-door Rocky is powered by a 1.6-liter, four-cylinder, 16-valve engine that produces 100 horsepower and is linked to a five-speed manual transmission.

Rocky will be offered in soft-top and higher-trim-level hard-top styles. Both are attached to an integral, functional roll cage that runs across the top from the B-pillar. Both styles also have a removable top panel.

The fiberglass hard top is removable and has pop-out side glass panels, while the soft top has plastic zip-out side panels.

The four-door Charade sedan will have 1- and 1.3-liter engine options. The smaller engine will be available only with a manual transmission while the larger will be offered with manual or automatic.

GM signs licensing pact with Australia's Orbital

By Podr Davis
SPECIAL CORRESPONDENT

General Motors, as expected, has signed a licensing agreement with an Australian firm for use of its two-stroke engine technology.

The agreement with Orbital Engine Co., a wholly owned subsidiary of Sarich Technologies of Perth, Australia, permits GM to manufacture, use and sell products worldwide incorporating the two-stroke engine technology invented by the Australian company.

The agreement specifies that the technology can be used in automobiles, trucks, motorcycles, along with aircraft, marine and industrial uses.

Meanwhile, Orbital Engine is expected to announce as early as the end of this month that it plans to build a U.S. manufacturing plant, probably in Michigan, with a consortium that would include Orbital Engine as well as one major auto company. It is expected that the plant will cost $250 million.

The licensing agreement between GM and Orbital Engine is similar to the one Orbital Engine signed with Ford Motor Co. late last year.

Though the companies would not reveal the financial details of the deal, it is believed to involve a multi-million dollar, up-front payment as well as royalties on each engine used. The royalties are believed to be on the order of $40 per unit.

GM would not discuss use of the Orbital engine. A GM spokesman said plans for the engine are not clear, but obtaining the licensing agreement guarantees the automaker the right to use the technology should the automaker decide to use it.

The licensing agreement with Orbital Engine comes on the heels of admissions by GM engineers that they have been unable to develop their own two-cycle engine that meets the more stringent emission standards expected in the future.

GM said work inside GM on two-stroke technology will continue despite the licensing agreement with Orbital.

Orbital Engine claims that its three-cylinder, two-stroke engine meets the more stringent emission standards being proposed for the United States.

According to Orbital, automotive applications have demonstrated emission level reductions of 30 percent for carbon dioxide, the primary culprit in creating the so-called greenhouse effect.

In addition, the technology also has demonstrated an 80 percent decrease in nitrogen oxide, 90 percent drop in carbon monoxide, and 50 percent decline in hydrocarbons, the Australian company has stated.

At the same time, because of the lower emissions, the engine probably would not require a catalytic converter, meaning the exhaust system would be less costly to produce. Rhodium is an expensive, precious metal used to make converters.

In addition to Ford and GM, Orbital Engine has full licensing agreements with Mercury Marine, Outboard Marine Corp. and Walbro Corp.

Orbital Engine said it plans to extend its licensing activities into Asia, Europe and Eastern Bloc countries.

Fiat expects year-end decision on Soviet car

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

TURIN, Italy — Fiat will decide by the end of the year whether to form a joint venture in the Soviet Union for co-production of the Soviet Oka minicar.

The venture would turn out 300,000 cars annually, about 60,000 to 70,000 for export to the West, according to Cesare Romiti, Fiat S.p.A. managing director.

The Soviet-designed Oka will be produced in a plant now under construction in Jelabuga, about 60 miles from Moscow.

The Soviets approached Fiat for assistance last September, citing ambitious plans to double Soviet Union auto output from the current 1 million units per year during the 1990s.

"We have negotiations ongoing," Romiti said in a meeting with a group of British journalists at Fiat headquarters.

Romiti said the plan calls for Fiat to "rationalize and industrialize" the Russian design, rather than develop its own car.

But he said Fiat insists that the car be up to the automaker's own standards.

Fiat sources said the arrangement would be similar to the Italian company's assistance in preparing the Soviet Lada Samara subcompact for production.

Although prototypes of the Oka exist, Romiti said the Soviets believe three to 3½ years will be necessary to produce the car in a Jelabuga plant.

Fiat has a long history of cooperation with the Soviet Union through licensing agreements. The Italian company built the Soviets' massive Lada vehicle complex in Togliatti during the 1960s.

But Romiti said the current negotiations are more difficult because of the Soviets' preference for joint ventures with the West.

"By the end of this year, we shall have to either adopt this deal or withdraw," he said.

Fiat would hold a minority share. Romiti said the company's investment would be limited to the equity capital necessary to acquire its stake.

"The Soviets are going to spend the money, not us," Romiti said.

The total cost is estimated at $1 billion to $1.5 billion. Romiti said Fiat's equity capital would probably be no more than $200 million, but he suggested that amount may give Fiat as much as 30 percent of the operation.

The Italian government will not be involved in financing the project, but will guarantee a return on investment, he said.

Romiti said Fiat's role in the Oka program would be limited to final assembly.

"We are not interested in participating in the production of the engine or mechanical parts or the foundry-related parts," he said. The involvement would include provision of manufacturing technology and equipment.

Romiti said the Oka would be of a "higher class" than the new minicar that Fiat will license for production at the FSM plant in Poland beginning in the early 1990s.

He also disclosed that the Polish-built minicar, widely referred to as Topolino, will be called Micro.

Though Romiti said the Oka would be in the same engine class as Fiat's aging 700-cc Panda mini, he said the Soviet car would not replace the Panda in Europe. He said Fiat is planning its own replacement.

Judge halts tax on auction sales

A district court judge has enjoined city officials in Commerce City, Colo., from levying a new tax — $10 for every vehicle sold at the Colorado Auto Auction.

The ordinance, passed last August by the City Council, calls for a $10 tax on the transfer of ownership of vehicles sold there.

"The ordinance relates directly to the auction activity," said Robert Gehler, attorney for Commerce City. "City officials felt there was an environmental impact on the city due to the number of cars parked at the auction. The excise tax was needed to offset any expenses incurred."

Colorado Auto Auction is fighting the ordinance in court on the grounds that it is unfair to single out a business for a special tax. Colorado Auto Auction is the only auction in the community.

"This is a tax on a dealer-to-dealer transaction," said Jeffrey Springer, who represents the auction. "Nobody else is subject to this tax. There is an issue of equal protection when only one business is singled out to pay a tax that benefits the entire city."

Springer also argued that the tax stifles interstate commerce. Since dealers buying and selling cars at the auction are indirectly subject to the tax, they may take their business elsewhere.

The auction began setting aside the $10 tax in an escrow fund after it filed the lawsuit. Gehler said there is about $200,000 in the fund.

Springer has asked Adams County District Judge Harlan Bockman to rule the ordinance unconstitutional.

Bockman recently denied a motion from the city to reconsider his injunction ruling. He said city officials shouldn't have used the charter's emergency ordinance procedures to approve the ordinance.

Now, city officials are using the regular ordinance approval process to pass it and have vowed to appeal Bockman's ruling.

Colorado Auto Auction is owned by Atlanta-based Manheim Auctions, a subsidiary of Cox Enterprises.

AUCTION BRIEFS

CHARLES THOMAS

Fire razes auction

The Greater Rockford Auto Auction is operating in a three-lane tent after a May 22 fire destroyed the auction's arena and its administrative offices.

Jimmy Clark, manager of the Rockford, Ill., auction, said the company sustained $1 million in damages after a car caught fire in the auction arena and the fire spread to the rest of the facility. There were no injuries.

The only building that remained standing was the three-stall reconditioning center. It now serves as the administrative offices for the auction.

Clark said the auction missed only two Wednesday sales before it reopened June 7.

The auction had about 400 registrations per week before the fire. That went to 500 vehicles when the auction reopened and is now back to 400.

The auction will rebuild and add one lane, giving it four. Completion is slated for October.

NAAA surveys dealers

Dealers surveyed by the National Auto Auction Association earlier this year said they visit an average of seven auctions each month.

More than 80 percent of those responding to the survey said they travel 100 miles to attend auctions, while 44 percent travel 100 to 500 miles.

Fifty-three percent of the respondents said they attend auctions to buy for retail sales while 24 percent visit auctions to track the shape of the markets and 23 percent attend them to sell or trade.

The ratio of domestic franchises to imports among the dealers surveyed was 3-1, with each dealer representing 2.4 franchises. As a group, the dealers said they average 85 used vehicles on their lots. Ninety-six percent of them retail used vehicles.

Business start

Donald B. Fowler has left his post as vice president and national sales director of GE Auto Auctions to start Performance Remarketing Specialists in Barrington, Ill.

The firm will offer automotive remarketing services, consulting and representation to financial institutions and leasing companies.

"The company grew out of the need of many small- and medium-sized businesses to profit in their back-end automotive endeavors," said Fowler. "Our services offer everything from back room setup and auction representation for our clients' cars to comprehensive reports on the financial gains resulting from our efforts."

AUCTION DATES

Chrysler Motors

June 20 — American Auto Auction, Walpole, Mass.; Arena Auto Auction, Chicago; Nashville Auto Auction, Nashville, Tenn.; Florida Auto Auction of Orlando, Ocoee, Fla.; Portland Auto Auction, Portland, Ore.; Riverside Auto Auction, Riverside, Calif.; and Greensboro Auto Auction, Greensboro, N.C.

June 21 — A.D.E. of Birmingham, Birmingham, Ala., and Butler Auto Auction, Gibsonia, Pa.

June 22 — Northway Exchange, Clifton Park, N.Y.; Aptco Auto Auction, Taylor, Mich.; Indianapolis Auto Auction, Indianapolis; Omaha Auto Auction, Omaha, Neb.; Southwest Auto Auction, Phoenix, Ariz.; Ark-La-Tex Auto Auction, Shreveport, La.; and San Antonio Auto Auction, San Antonio, Texas

June 23 — Manhiem Auto Auction, Manheim, Pa.

June 27 — Clanton's Auto Auction, Darlington, S.C.; Denver Auto Auction, Aurora, Colo.; Southern Auto Auction, Warehouse Point, Conn.; Hatfield Auto Auction, Hatfield, Pa.; South Seattle Auto Auction, Kent, Wash.; Golden Gate Auto Auction, Fremont, Calif.; and Dallas Auto Auction, Grand Prairie, Texas

Brazil's ethanol crisis spurs rebound in gasoline engines

By Rik Turner
STAFF CORRESPONDENT

SAO PAULO, Brazil — Lines are forming in front of some filling stations here as motorists try to find a fuel that has grown scarcer.

Other stations display a sign: "Sorry, we're out of alcohol."

Meanwhile, Brazil may be faced with a gasoline surplus.

A decade after the first ethanol pumps were installed in Brazil's filling stations, the government is reining in the world's most ambitious initiative in alternative fuels.

Brazil's Proalcool program to substitute gasoline with anhydrous alcohol (ethanol) made from sugar cane has replaced gasoline in nearly 4 million of Brazil's 11 million vehicles.

But recent ethanol shortages, low oil prices and a continuing need for diesel fuel have forced the government to order a 28 percent cut in the production of alcohol-powered automobiles and an increase in the price of ethanol.

Earlier this month, Vicente Fialho, this country's mines and energy minister, ordered the auto industry to cut production of alcohol-powered cars. The decision will result in an equal number of alcohol and gasoline cars being produced, compared with the current 70-30 ratio favoring alcohol-powered vehicles.

Last November, 85 percent to 90 percent of the approximately 190,000 vehicles that General Motors do Brasil produced were ethanol-powered, according to a company spokesman. Today, that has dropped to about 65 percent.

Brazil's ethanol program, designed to reduce the country's dependence on imported oil, was launched in 1975. The program has cost $7 billion in subsidies for planting sugar cane and constructing distilleries, and it has generated fuel worth $27 billion, Fialho said.

But Proalcool has caused monumental headaches for Petrobras, the state oil monopoly. This year's reduced cane crop and higher world sugar prices, which stimulated exports, provoked scenes reminiscent of the oil crisis days in the United States.

According to the Sao Paulo Sugar Producers Cooperative, the alcohol equivalent to a barrel of gasoline costs around $31 to produce. For alcohol to be competitive, the cooperative concluded that world petroleum prices need to be around $24 a barrel.

Current spot prices are in the $18-$20 range.

Ethanol is less efficient than gasoline, and it is more corrosive, requiring a stainless steel fuel system. When it launched the program in the 1970s the government provided incentives to buy alcohol-fueled cars: tax exemptions and a ceiling on ethanol prices, leveled at 65 percent of the price of gasoline. But that ceiling has already been broken as the price hit 70 percent of the price of gasoline.

Furthermore, ethanol replaces only gasoline — not other oil derivatives. Eighty percent of all Brazilian freight is shipped by truck so the demand for diesel fuel has continued to be high, requiring crude oil to be imported and refined.

A byproduct of the diesel refining process is gasoline. Thus Petrobras has a surplus of the fuel.

Petrobras has chalked up handsome sales in recent years, exporting 100,000 barrels of gasoline daily to the United States. The problem, according to the superintendent of Petrobras' industrial department, will come when the company plans to expand.

Petrobras wants to double its petroleum production and refining capacity by 1995, making Brazil virtually self-sufficient in oil. So Petrobras faces an increasing gasoline surplus and difficulty increasing sales to the competitive U.S. market.

Industry awaits details of air plan

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Automakers are awaiting details and deadlines that will flesh out President George Bush's dramatic new initiative to clean America's air.

Bush last week proposed to tighten tailpipe emissions standards and to have the manufacturers make a half million methanol-powered vehicles in 1995 and a million a year by 1997.

Automakers may be forced to commit to new product programs as early as this year.

The proposal will speed the development of alternative fuel vehicles and force filling stations to fuel the cars.

While auto executives generally praised the president for a flexible plan, they are anxiously awaiting the timetables. Detailed legislation could be submitted to Congress within two weeks.

In an industry that takes years to bring a new product to market, the deadlines are critical, and Bush provided few of them.

"Four or five years is the typical lead time for a new gasoline vehicle," said Richard J. Wineland, senior research engineer for alternative fuels engine research at Ford Motor Co. "For an alternate fuel vehicle, you have to tack a couple years on top of that. So if you are talking about building our share of 500,000 vehicles by 1995, that decision has to be made today. Has Ford made it? No. Are we looking at it? Yes."

The Big 3 and major foreign makers already have vehicles that can run on methanol or other alcohol fuels, but they prefer a more limited pilot program to study the introduction of such vehicles to the marketplace.

Many in the auto industry adopted a can-do reaction to Bush's challenge.

Fred Schaafsma, chief engineer at Chevrolet, said, "I know that some of these alcohol fuels are going to be sold. And I know that the president sort of left it up to the economy to decide how it goes. But no matter how it goes, we're going to be ready."

Bush proposed that the limit for hydrocarbon emissions for light trucks be cut roughly in half. That could pose a problem for Chrysler Motors, which holds more than half of the domestic minivan market.

But Albert Slechter, Chrysler Motors' director of federal government affairs, said the challenge of meeting a stricter hydrocarbon standard for the minivan would be "another chore, but not out of the question. We would have to add it to the list of things we have to do."

In his address last Monday, Bush did not specify how customers will be encouraged to buy alternatively fueled vehicles and how the infrastructure to deliver such fuels will be built.

The Environmental Protection Agency is reviewing the details of the administration proposal. EPA officials said the legislation may be delivered to Congress in about two weeks if it is not delayed by the Office of Management and Budget. The President called for his clean air legislation to be passed this year.

The President proposed a 10-year plan to introduce vehicles that run on alternative fuels in the nine urban areas with the worst ozone pollution. (See chart.)

Ozone, the major component of smog, can cause or exacerbate breathing problems. It is formed when nitrogen oxides and hydrocarbons react with sunlight.

Bush's clean air plan also covers other industries, including the electric utility industry.

The National Association of Fleet Administrators cautiously praised Bush's proposal, but said it was short on specifics.

In a statement, Frank W. Kraus, the group's past president, said the administration's clean air proposal may be more workable than other alternative fuel legislation now before Congress.

The president's proposal also calls for tighter vehicle tailpipe emission standards. Two bills already under hot debate in the House of Representatives focus on tighter tailpipe emissions.

Bush's plan calls for:

● Hydrocarbon emission standards to be tightened from .41 grams per mile to .25 gpm.

● Emissions of nitrogen oxides to be cut from 1.0 gpm to 0.7 gpm.

Bush proposed that light-duty trucks, which for the purposes of the Clean Air Act presumably include minivans, pickups and sport-utilities, would have to meet the same hydrocarbon emission standard — .41 gpm — now required for automobiles. The current light-truck standard is .8 gpm.

Bush's plan would allow an automaker to "trade emissions" with another, which might give some flexibility for nonconforming vehicles if other vehicles are below the standards. But those provisions have yet to be defined.

Bush sees a clean future

President George Bush announced his plan for clean air June 12. These are the major provisions affecting automakers and the fuel industry:

- Light trucks meet car-emission standards
- Hydrocarbon emissions reduced for cold weather starts and idling engines

- Sales quotes for alternative fuel cars:
  1995 - 500,000
  1996 - 750,000
  1997-2004 - 1,000,000
- Alternative fuel required in 9 polluted areas:
  Los Angeles, Houston, New York City, Milwaukee, Baltimore, Philadelphia, Connecticut, San Diego, Chicago

- Vapor catchers on gas pumps
- Less evaporation from gas tanks and fuel lines
- Less volatile gasoline in summer

U.S. can learn from Ford work in Brazil case

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — Roberta Nichols believes the U.S. auto industry can learn from Brazil's experience as it faces the prospect of selling half a million alternative fuel domestic vehicles in 1995.

But Nichols, principal research engineer of Ford Motor Co.'s engineering staff, said one difference is that the United States doesn't have a dictator who can guide consumers into alternatively powered cars.

In 1975, Brazil began shifting from gasoline to ethanol made from sugar cane. Ford of Brazil and other automakers faced their share of challenges, Nichols said.

Their task was simplified because Brazil had no emissions standards, but they did have to make changes in the fuel system. Ethanol, like the methanol that would be used in the United States, is more corrosive than gasoline, so automakers had to develop new, corrosion-resistant materials.

The company also added larger fuel tanks to its fleet because cars powered by ethanol or methanol require more fuel per mile than gasoline-powered cars.

The methanol challenge will be doubly difficult in the United States. Methanol is even less energy-intensive than ethanol, and current vehicles provide little room for a larger fuel tank.

Two concerns about alternative fuels are motivating people to buy the cars and availability of fuel.

In that respect, Brazil had an edge.

"I'm not advocating a dictatorship, but in some situations it does have its advantages," Nichols said.

Brazil's government encouraged the use of ethanol by allowing three-year financing on the purchase of ethanol-powered cars. Loans on gasoline-powered cars had to be paid back within a year.

Gasoline stations were closed on weekends, Nichols said, but ethanol stations were open all week.

Such steps promoted a quick transition, Nichols said. Ford of Brazil produced its first ethanol vehicle in 1979; seven years later, 99 percent of its cars and 85 percent of its trucks ran on the fuel.

But there were growing pains.

Some water naturally exists in ethanol without affecting performance, Nichols said. When some unscrupulous service station owners discovered this, they added water of their own.

Europe heads for U.S.-level emission rules

By Jean-Jacques Renaux
STAFF CORRESPONDENT

LUXEMBOURG — The ministers of environment of the European Community voted to impose U.S.-like exhaust emissions standards on small cars by the end of 1992, bringing those requirements in line with tighter limits that had been proposed earlier for larger cars.

The short timetable, if approved by the full European Commission, will force carmakers and suppliers to invest in crash programs to develop or buy fuel injection systems and three-way catalysts, which control hydrocarbons, carbon monoxide and nitrogen oxides.

The tougher rules cover cars with engines of less than 1.4 liters — an estimated 60 percent of cars in Europe. Some automakers condemned the three-year deadline as unrealistically short; at the same time, some were pleased a decision had ended uncertainty.

After a two-day debate, 10 of the 12 member states voted for the new standard June 9. Greece and Denmark voted no; they wanted more stringent standards.

The new standard limits carbon monoxide emissions to one-third of the current limit. The limit for combined hydrocarbon and nitrogen oxide emissions will be cut 74 percent.

The ministers also decided that any country may promote the new standard with tax incentives to buyers before the compulsory dates. The incentives can pay for up to 85 percent of the cost of the required new emissions components on new cars.

Those incentives will expire when the standards become mandatory — July 1992 for any new model introduced and Dec. 31, 1992, for all new cars.

The Council of Environmental Ministers also said the European Commission will take up new emission proposals by year's end as part of a plan to add a new highway test procedure.

Many carmakers were relieved by the small car decision, because it ends years of uncertainty.

But some still worry because the decision to take up revisions later this year could lead to more legislation within two years.

Renault, the state-owned French automaker, welcomed the decision but said the short lead time might make it difficult to get the right supply of fuel injection systems and catalysts in time.

FINANCE

FROM PAGE 1

Corp. reported that on Dec. 31, 1988, it had $99.04 billion in total assets. Ford Motor Credit Co. had $56.28 billion in total assets, and Chrysler Financial had $28.75 billion.

GMAC, with $7.1 billion in equity, was leveraged 12.7 to one. Ford Credit had $4.26 billion in equity and was leveraged 12.2 to one. Chrysler Financial reported $2.63 billion in equity and was leveraged 9.9 to one.

William R. Battey Jr., a First Boston director identified by Tonkin as the project head, declined to be interviewed.

Tonkin acknowledged that even $2 billion would dwarf in comparison to GMAC, Ford Credit and Chrysler Financial. "It would be a starting point" he said. "If dealers use the services, it would grow very rapidly."

He said the objectives of such an NADA finance company would be to guarantee retail and wholesale financing for all NADA members, particularly "multi-line dealers who are at the mercy of captive finance arms," as well as make money for the dealer investors. It also would likely make money for NADA.

"There is a sword, or threat, hanging over the heads of dealers that somebody could pull their financing. You might have financing for one (franchise), but if you've got seven or eight, there's no guarantee a captive can't come along and say they'll only handle their products," Tonkin said

"This isn't happening currently, but you never know what tomorrow will bring."

He conceded that some factory officials might consider the feasibility study an NADA attempt to gain bargaining leverage in disputes with the factories.

"We're not looking for leverage, we're looking for profit opportunities," Tonkin said.

But he again criticized the factories for takeaways.

"If we can't make a buck because of decreased warranty allowances and we can't make a buck because we have to pay for their advertising and we can't make a buck because there's no 5 percent carryover allowance and we can't make a buck because we have to buy all the expensive data processing equipment — we'll just have to find another way," Tonkin said.

Tonkin, a multi-franchise dealer in Portland, Ore., conceded that not every dealer is in a position to invest $5,000, but that many others — like himself — would want to invest more than $5,000.

He said finance income has become an important profit center in every dealership. Since dealers generate that finance income for themselves and their factories' finance arms — as well as banks and other finance companies — and know the business, a dealer-owned finance company makes sense.

"Ultimately, we could handle all finance needs, including capital loans," Tonkin said. "We have close to 21,000 members. There are about 4,000 dealers who are not members of NADA, but I guarantee you, if we can do this, all the dealers would join NADA in a hot second."

The NADA board last week appointed a committee of state NADA directors to investigate the NADAF possibility. Ramsay H. Gillman of Houston, the new South Texas director, is chairman. Other members are Bob Brest of Lynn, Mass.; C. William Briggs of Minneapolis; Robert J. Maguire of Bordentown, N.J.; and Larry Crnkovich of Idaho Falls, Idaho.

Automotive News Staff Reporter Jim Henry in New York contributed to this report.

NADA

FROM PAGE 3

a lot of other things."

Tonkin threw down the gauntlet early in his tenure, establishing the Rough Riders dealer group to oppose "take-aways" and "cost-passing" by the factories at the expense of dealer profits. The issue of fleet subsidies is at the top of Tonkin's hit list.

Among his other complaints are General Motors' cancellation of the 5 percent carryover allowance, dealer improvement programs that interfere with a dealer's independence and factory-run customer satisfaction indexes that are used to determine if a dealer will continue to hold a franchise.

As for the Rough Riders' rocky start, Tonkin said several dealers who were named in the initial announcement and balked at their names being used without permission have reconsidered and joined the fold.

Last Thursday Tonkin said there were "nearly 500" Rough Riders, and he predicted there would be "almost 1,000" by the end of July.

"There are several things I've been trying to do to unite the dealers, and the Rough Riders is one. The Rough Riders are doing far better than my wildest dreams," Tonkin said.

Green, Tonkin's likely successor, has been a new-car dealer since 1958. He was NADA secretary in 1987; vice president of region 3 in 1985-1986; and trustee of the dealer election action committee and national fundraising chairman in 1988.

Green chaired the dealership operations committee in 1983-1984. Green serves on several committees including building, industry relations, Project 2000 and as NADA/American International Automobile Dealers Association liaison.

A former chairman of the Toyota line group, Green also has franchises with Chevrolet, Mazda, Volkswagen, Audi, Porsche, Jeep-Eagle and Yugo.

Green

The nominee for first vice president, Anderson, is president of Sir Walter Chevrolet in Raleigh, N.C. He has been a franchised new-car dealer since 1970.

Anderson is chairman of NADA's finance committee and serves on the building committee. He is executive committee liaison to the policy and by-laws committee, and he has served on several committees including governmental relations, public affairs, finance, policy and by-laws, and building.

Herrmann, the nominee for secretary, has been a dealer since 1967. His franchises include Buick, Subaru and GMC Trucks. He serves on the nominating committee and is executive committee liaison to the public affairs committee. Herrmann is also advisor to the Automotive Consumer Action Program for NADA Consumer Affairs. He originated the Greater New York Automotive Consumer Action Program.

Mercedes doffs its kid gloves

Soft-sell image ads dumped as dealers ask for hard-hitters

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

In response to pressure from its dealers, Mercedes-Benz of North America is changing its advertising from soft-sell image ads to a hard-hitting, fact-oriented campaign.

The first of the new breed of Mercedes ads appeared last month with the message, "Take a look at one now." It is a retail-oriented campaign funded partly by Mercedes dealers. It will be followed by a brand campaign for Mercedes' 1990 models that will break in July and will speak more directly to consumers.

"We are going to be talking about Mercedes-Benz and what makes Mercedes-Benz stand out above the rest," said Will Metzger, executive vice president and management supervisor on the Mercedes-Benz account at McCaffrey and McCall in New York.

The change in tone resulted from pressure by Mercedes dealers on the importer and McCaffrey and McCall. Dealers, who have watched Mercedes sales drop 19 percent in 1989, asked Mercedes to give them harder-hitting ads that would bring customers into the showroom.

Neither campaign will mention other car companies or other models, a tactic several Mercedes' competitors have used. Buick and BMW have shown Mercedes models in their national advertising. The Southern California Acura dealers call the Acura Legend "A Mercedes-Benz replacement part."

"Mercedes-Benz is taking the higher road," said Kent Sednaoui, senior vice president and management supervisor on Mercedes-Benz dealer advertising at McCaffrey and McCall.

Mercedes will present a series of statistics from surveys and automotive enthusiast magazines that laud Mercedes-Benz models. In the past, Mercedes has presented facts in print or television with a beauty shot of a car driving down a road. The new retail campaign takes a more direct approach by using several spokespersons to deliver the facts, Metzger said.

The television spots begin by showing a question on the screen. One ad asks, "Is satisfaction luxury?" A young, professional woman appears on the screen talking about Mercedes-Benz's repeat buyer statistics.

"You know, it's one thing to love a luxury car the day you buy it. But . . . later?" says the spokeswoman. "Yet just last year, more Mercedes-Benz owners said they'd buy another (Mercedes) than the owners of any other make sold in America."

Another ad addresses resale values and yet another presents the option of leasing.

All television commercials show the spokesperson at the beginning of the spot and close with a full view of a Mercedes. Print ads show the spokesperson and the car. Radio ads are similar to the voiceovers in the television spots.

To start the campaign with a punch, Mercedes purchased several spots on network television. The rest of the campaign will run locally and will be funded by Mercedes and its 250 dealer groups through its advertising co-op program. Mercedes-Benz contributes $100 to $125 per car in a dealer matching program instituted in the 1988 model year.

The new national brand commercials will begin airing in July to introduce Mercedes' 1990 lineup but will not be a "call to action" campaign like the current dealer pitch. Spots like the 1989 television ads showing German and American businessmen driving on the autobahn in a Mercedes at high speed will be replaced by ads that are "a lot more direct and hard-hitting," said Metzger.

"Those type of ads were perfect for the market at the time; but the market has changed and those kind of ads are not hard-hitting enough for today's competitive environment," he said.

Mercedes is launching its dealer and corporate campaigns just as consumers are beginning to see advertising for Toyota's Lexus and Nissan's Infiniti luxury cars, which are aimed squarely at Mercedes' market. Metzger and Sednaoui said the introduction of those cars is not solely responsible for the change in Mercedes advertising.

The new corporate campaign will continue to use the themeline "Engineered like no other car in the world." The dealer campaign uses "Like no other dealers in the world" as its primary themeline with "Take a look at one now" as the secondary theme.

JEEP

FROM PAGE 1

present Cherokee into the next decade and production as well of the more aerodynamically styled ZJ.

Sale of the ZJ by Dodge is a threat to Jeep's strong image and identity in the market, protesting dealers claim, and will undermine the brand by confusing buyers.

"We feel ZJ should be kept by Jeep. It would bring down the Jeep nameplate. It represents a threat to Jeep-ness," the source said.

Following Chrysler's acquisition of AMC in 1987, Chrysler senior management said it would not sanction badge engineering, the use of different nameplates on the same basic vehicle.

"Their position has changed 180 degress in two years. This is badge engineering," said a Jeep-Eagle dealer. "That's why we want to sit down and talk."

The Dodge version of the ZJ will have exterior cosmetic changes to differentiate it from the Jeep vehicle, a dealer source said. The changes include body side moldings, taillamps, headlamps and possibly colors.

Drivetrains and powertrains will also differ. Powertrain decisions have not been finalized, but it has been decided that Jeep will receive the more powerful powerplants.

The dealer source said Chrysler is considering mounting a 4.5-liter six-cylinder engine in the Jeep ZJ and using the current Cherokee's 4-liter six in the Dodge version. Also under consideration is use of Chrysler's new 3.3-liter V-6 and possible development of a V-8, the source said.

It has also been determined that Dodge will not receive the Jeep four-wheel-drive system, the source said.

The production ZJ will be similar to this vehicle, displayed on the auto show circuit earlier this year.

AUTOMOTIVE NEWS-JOE WILSSENS

"Dodge will either develop a new one or use what it has today," the source said.

Jeep-Eagle dealers are concerned that Dodge will cannibalize Jeep sales and encroach on the bottom end of the Jeep market.

"We're looking two or three years down the line and where Jeep will be in the public eye," the source said.

"If we don't get the customer into our store and tell him the differences in the vehicle, he will never know. The customer will get a clone of the Jeep but without the componentry."

Jeep-Eagle dealers have told Chrysler management that Jeep dealers could sell the anticipated production capacity of 200,000 ZJ units annually.

National dealer council representatives have met with Chrysler Motors Chairman Bennett Bidwell and Lutz in an effort to overturn the product decisions.

At those meetings, Chrysler management reportedly said that even prior to the AMC purchase, the company had planned to offer through Dodge a 4wd sport-utility in the 1990s.

A source said that Chrysler management claimed it is too costly to develop and produce two separate sport-utility vehicles.

Lutz recently acknowledged Jeep-Eagle dealer concerns during a discussion of the Dodge Monaco.

The Monaco will differ from the Premier through use of a distinctive Dodge grille and other Dodge-specific trim such as taillamp applique, two-tone paint treatment and wheel trim.

"Obviously, the Eagle dealers would have preferred to keep the car exclusive to them," Lutz said. "We have had a lot of very frank discussions about it with the Jeep-Eagle dealer council. In the final analysis, while they didn't like the decision, they could understand the need for it."

Chrysler is offering the Dodge Monaco to increase production at its Bramalea, Ontario, assembly plant, which has an estimated annual production capacity of 200,000 units. Chrysler produced 19,909 Premier cars at Bramalea from Jan. 1 to June 10, 1989.

In addition, when Chrysler acquired AMC in August 1987, it agreed to sell at least 300,000 Premiers between 1988 and 1992 or pay a penalty to Renault, which supplies Premier componentry.

"Any plant that just sits there with partial capacity utilization represents some financial drain and, worse yet, a plant can't really keep itself efficient if it's operating at a very low capacity utilization level," Lutz said. "It's just like using your muscles. There are all kinds of good reasons to (offer a Dodge version) and get the capacity utilization up."

Mercedes battles 'bad-faith' penalty in parts theft

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Mercedes-Benz of North America has asked a federal court in Los Angeles to set aside $4.5 million in damages a jury assessed against Mercedes-Benz for "bad faith" in a case against Hartford Accident and Indemnity Co.

And Hartford has filed a similar request to set aside $100,000 in breach-of-contract damages awarded to Mercedes-Benz in the complex case.

Mercedes-Benz filed suit against Hartford in 1986, alleging Hartford had improperly failed to pay Mercedes-Benz about $700,000 in claims in connection with the theft of parts from its La Mirada Parts Distribution Center in California from 1977 to 1982.

Mercedes-Benz, based in Montvale, N.J., said the parts were stolen by five employees who were covered by a "fidelity bond" purchased by Mercedes-Benz as insurance against theft by insiders.

Based on its investigation into the insurance claim, Hartford countersued Mercedes-Benz for "bad faith" for concealing key facts and documents from Hartford, including evidence that Mercedes-Benz had suspected one of the five employees as early as 1979, but took no action.

That suspicion, which was documented in the employee's personnel file, should have invalidated the "fidelity bond" that Mercedes-Benz cited in suing Hartford with respect to that one employee, said Robert N. Block, one of the Los Angeles attorneys who represented the insurance company.

Block said the five employees were arrested in 1982 in connection with the theft of about $2,000 worth of parts. They pleaded guilty to misdemeanor theft and were placed on probation. Their records were expunged after they completed their probation, Block said.

But in the Hartford lawsuit, Mercedes-Benz attempted to attribute several hundred thousand dollars' worth of parts disappearances to the group, he said.

In its May 25 verdict, a six-member federal jury awarded Mercedes-Benz $100,000 in damages in connection with the parts thefts, but socked Mercedes-Benz with $4.5 million in punitive damages and $5,000 in compensatory damages.

In its petition to set the verdict aside, Mercedes-Benz argued that the punitive damages were "excessive" and alleged several technical errors in the seven-week trial. In the absence of a directed verdict issued by Judge A. Wallace Tashima, Mercedes-Benz asked for a new trial.

A hearing has been set for July 17 on the motions of both parties to set aside the verdict, Block said.

Sales rise, but cars are weak

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

Retail sales of new U.S.-built cars and light trucks in the first 10 days of June crept ahead of last year's equivalent 10-day period by 1.02 percent.

Early-June deliveries totaled 317,619 units, compared to 314,417 in 1988. Both periods had nine selling days.

Car sales were weak both years. The eight U.S. carmakers delivered 201,248 units compared to last year's depressed count of 198,647, when most incentives had been reduced. This year's increase was 1.31 percent, or 2,601 units, despite stronger incentives.

Truck sales were good in both 10-day periods. The four U.S. truckmakers reported a gain of 0.52 percent on deliveries of 116,371 compared with 115,770 in early June last year. General Motors and Chrysler Motors were up while Ford Motor Co.'s light-truck deliveries lagged. Transplant Nissan reported the biggest 10-day loss.

The car situation was different: Ford's sales were up and GM's were down slightly. Among the Big 3, Chrysler's U.S.-built car sales fell the most from last year's comparable 10-day total. Nissan was the only transplant to report a major 10-day slide.

In the first 10 days of June, Ford delivered 5.21 percent more domestic cars than it did in the comparable 1988 period. At Ford Division, Mustang and Taurus sales improved and Probe sales more than doubled. Mercury's Topaz, Sable and Tracer were stellar sales performers. Extended incentives bolstered Continental, Lincoln and Mark VII deliveries, too.

GM sold 0.70 percent fewer cars than in the equivalent year-ago period, but four of its five divisions reported gains. Chevrolet's new-car sales climbed 11.33 percent. Only Oldsmobile sold fewer cars; its 10-day deliveries dropped 18.61 percent from last year's.

All Chrysler Motors division sold fewer cars this year, but the Dodge dip was minimal — only 20 units.

Among the transplants, Toyota sold more than three times as many U.S.-built cars as it did in the same period last year. Sales of domestically produced Civics were responsible for most of Honda's 16.38 percent increase.

Mazda sold 9.88 percent more U.S.-built MX-6s this year; the gain was 60 units. Nissan reported a drop of 45.91 percent in early-June domestic car sales, although its year-to-date sales of U.S.-built Sentras are up. Mitsubishi, which was not building cars at the Diamond-Star plant in Normal, Ill., last year, sold 835 Eclipses in early June.

Mack goes outside for president

Reins leaves supplier to take truck post; Curcio still chairman

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Curcio

Reins

Ralph Reins, senior vice president of ITT Corp. and president of ITT Automotive in Troy, Mich., has been named president and chief operating officer of Mack Trucks in Allentown, Pa.

Reins will be elected to Mack's board of directors Wednesday, exactly nine years after John B. Curcio was named president and chief operating officer of the company.

Curcio has been chairman, president and chief operating officer of Mack since 1983. In an interview, he said it was normal for major corporations to have at least a two-man team at the top.

With Reins running the company on a day-to-day basis, "I intend to spend more time on the strategy and planning side of the business, without worrying day-to-day how things are going at a given manufacturing plant," Curcio said.

"I also intend to spend more time than I've been able to with our field organization, our distributors and customers. It's difficult to do that when you have to look after the store all by yourself," he added.

During the past five years, Mack has been restructured, Curcio said. It closed some older facilities and opened its new Winnsboro, S.C., plant. It also added major new vehicle lines, engines and other truck components.

With its $500 million capital investment program completed, the company is starting a new five-year program. "We felt the timing was right to make an addition to the team," Curcio said.

He said Mack began its search for a president a year ago. Reins was selected because of his strong operating experience, technical background in engineering and manufacturing and international experience.

"The truck industry is so globalized today. In order to understand the worldwide competition, as well as the material and supply side, you need someone with a good understanding of the international marketplace," Curcio said.

Reins has 25 years' automotive experience, 17 of them in the heavy-duty truck segment. He began his career in 1963 with General Motors, moved to Rockwell International in 1973 and has served in Rockwell's North American and European automotive operations.

In 1980, he became vice president and general manager of Rockwell's axle division, and in 1982, he was named president and general manager of Rockwell's on-highway operations, an officer of the corporation and a member of the corporate management committee.

He joined ITT Corp. in 1985 as president and chief executive officer of ITT Automotive and was named senior vice president of the corporation in 1987. ITT Automotive produces a wide variety of automotive components, ranging from windshield wiper systems to anti-lock brakes.

Curcio pointed out that "when you bring in a chief operating officer you're also bringing in someone who hopefully will someday succeed the CEO."

Curcio is 55; Reins is 48.

Although Curcio does not have retirement plans, he said he considered that a "good age spread" to set up a future succession. Curcio said there are no plans to name any additional top-level people to new jobs at Mack.

FORD

FROM PAGE 1

models also are produced there.

By counting the 1991s as imports, Ford expects to boost its domestic CAFE average by 0.6 or 0.7 mpg, Kulp said. Ford's imported fleet rating will correspondingly fall by more than that amount, Kulp said, because of the volume of the Crown Victoria/Grand Marquis.

Last year, Ford sold more than 228,000 Crown Victoria and Grand Marquis models. They are powered by a 5-liter V-8 engine and are among the largest and least fuel efficient in Ford's lineup. Their fuel economy is listed at 23 mpg for CAFE purposes.

Kulp said that with sales trends favoring larger cars, Ford has decided to balance the mix of small and large cars in the domestic and imported fleets. The alternative was to build some large cars offshore, he said.

"The intention is to make sure that both groups remain comfortably above the 27.5-mpg standard," Kulp said.

Ford also plans to increase its domestic fuel economy rating by including two models that are currently counted as imports — the Ford Probe, which will offer a Ford V-6 in 1990, and the replacement for the Mercury Tracer.

The Tracer, built at a Ford plant in Hermosillo, Mexico, will be replaced next spring under the same program that will provide a successor for the Ford Escort.

The new model is expected to carry 75 percent North American content, Kulp said. Even though it will be assembled in Mexico, it will count as a domestic by virtue of its North American content level.

The Probe, built for Ford by Mazda in Flat Rock, Mich., is also expected to reach the 75 percent domestic content mark within a year, he said.

North American sourcing for the Grand Marquis/Crown Victoria will probably fall in the 73 to 74 percent range, Kulp said. He said all the non-North American parts will be "relatively small components." A Ford source said they will come from nine countries.

In 1985, Ford threatened similar action on the Crown Victoria/Grand Marquis. At the time, Ford and General Motors petitioned NHTSA to lower CAFE requirements from 27.5 mpg to 26 mpg.

Ford dropped the plan after CAFE standards were rolled back. But the idea was resurrected about a year ago, Kulp said, partly out of the belief the rollbacks were temporary.

The offshore sourcing changes planned for 1991 will not involve engines, the source said. Ford is expected to equip the EN53 series with a new 4.6-liter modular V-8 slated for production in Romeo, Mich., next year.

Ford has taken issue with U.S. fuel standards by arguing that the system unfairly punishes domestic full-line manufacturers. The company contends that U.S. makers are at a competitive disadvantage because their strength is in full-sized cars — and consumers want them. As a result, Ford argues, it must sell high volumes of domestic small cars — where imports are strongest — to offset sales of less-fuel-efficient large cars.

It advocates a system that would require each maker to improve fuel economy by an equal percentage.

Don Richardson, president of Canadian Auto Workers Local 1520 in St. Thomas, acknowledged that Ford faced a difficult decision. But he maintained that Ford could meet fuel economy requirements without reducing North American content. He fears loss of jobs.

OBITUARIES

Joseph G. Pais

WEST PALM BEACH, Fla. — Joseph G. Pais, 79, retired director of personnel for Cadillac, died May 17. He began a 47-year career at General Motors as an hourly worker in 1925. His son, Donald A. Pais, is vice president of GM's materials management staff.

Rudolf Uhlenhaut

STUTTGART, West Germany — Rudolf Uhlenhaut, 82, former head of car development at Mercedes-Benz, died May 8. He retired in 1972 after 41 years with Mercedes. In the late 1930s, he led the automaker's Grand Prix race team and helped develop its Silver Arrow race cars.

Robert Carter

OAKVILLE, Ontario — Robert Carter, 47, general counsel and secretary of Ford of Canada, died of a heart attack May 24. A 12-year veteran of Ford, he was appointed to his last job in March 1986.

Henry B. Cutler

BOSTON — Henry B. Cutler, 80, retired owner of Cutler Buick in Cohasset, Mass., died May 25.

Joseph S. Santin

MYSTIC, Conn. — Joseph S. Santin, 90, former owner of Santin Chevrolet here, died May 31. He ran the store for 52 years. It was sold in 1972 and later moved.

Ford to shut two Escort plants again

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

For the second time in a month, Ford Motor Co. will close its Escort assembly plants due to slow sales. The company's Wayne, Mich., and Edison, N.J., facilities will be idled June 26.

The one-week shutdowns will trim the industry's weekly output by about 8,5[illegible]0 units and will result in temporary layoffs for 4,600 hourly workers. Ford idled both Escort plants in late May a[illegible]d early June because of slow sales. Those were the first shutdowns of U.S. Ford plants for high i[illegible]ories since 1983. On June [illegible] [illegible]d a 94-day supply of Esc[illegible]

Chrysler Motors is c[illegible] [illegible]n expansion and moderni[illegible] 52-year-old Warren, Mic[illegible] [illegible]k plant. A four-week model changeover began today, and the plant is expected to be ready to resume production in July.

The plant's paint shop will be enlarged by 90,000 square feet, and another 24,000 square feet will be added to the final assembly area. Hourly and salaried employees have been involved in extensive training programs in preparation for assembly of the Dodge Ram, Dodge Dakota and the new Dakota Club Cab pickups.

Meanwhile, General Motors idled the Allante line at its Detroit-Hamtramck plant today due to high inventories. The line is expected to resume output June 26.

Earlier this month, GM ended production of its compact Buick Skyhawk. The Skyhawk, which was built at the Janesville, Wis., plant, will not be offered in the 1990 model year.

Last week's scheduled domestic auto output of 141,151 rose slightly (0.46 percent) over the previous week's 140,501 but fell substantially (14.81 percent) from the year-ago week's 165,688.

So far this year, 3,567,509 cars have been built, 2.64 percent more than the 3,475,808 completed last year at this point.

Truckmakers targeted last week's production at 88,887, a bit below (0.25 percent) the prior week's 89,110 but slightly above the year-ago week's 88,129.

Year-to-date, 2,133,917 trucks have been produced, 5.34 percent more than the 2,025,712 built last year at this time.

Canada output takes big jump

Last week's scheduled Canadian car output of 24,447 was 29.20 percent more than the prior week's 18,922 but 1.14 percent below the year-ago week's 24,730.

So far this year, 481,413 cars have been assembled, 15.59 percent fewer than the 570,350 completed last year at this point.

Truck output was targeted at 21,332 units last week, 18.67 percent more than the previous week's 17,976 and 5.99 percent above the year-ago week's 20,127.

Year-to-date, 479,748 trucks have been built, 4.36 percent more than the 459,705 assembled last year at this time.

Small-car content shift leads GM's CAFE plan

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

General Motors will shun Ford Motor Co.'s off-shore-sourcing strategy and move to bolster its fuel-economy rating by increasing the domestic content of two North American-built small cars that are currently counted as imports.

Ford recently said it will reduce the North American content of its Ford Crown Victoria and Mercury Grand Marquis. The move, to take effect in 1991, will enable Ford to count the gas-thirsty big cars as imports for corporate average fuel economy purposes.

That's not the approach GM will take, said J.T. Battenberg III, head of GM's Buick-Oldsmobile-Cadillac Group. Although it had discussed the idea, it will improve its rating in other ways, he said.

Meanwhile, an aide to Rep. John Dingell, D-Mich., pointed to Ford's strategy as a warning to environmentalists who think that proposals to mandate higher fuel economy standards won't carry side effects.

And Chrysler Motors President Robert Lutz said the United States could be opening the doors to an invasion of big, fuel-guzzling imports if a substantially higher standard becomes law. He pointed to the CAFE credits that many importers have built up through years of being well above the CAFE standard.

The strategies to respond to stricter fuel economy standards for 1990 and possibly tighter rules later in the 1990s came to light last week after a show of unity on the part of U.S. automakers.

The Big 3 confirmed that their top officers met privately June 6 to discuss environmental and fuel-economy issues on the agenda in Washington. The unusual huddle took place days before President Bush revealed details of his proposal for cleaner air.

The automakers did not provide details, but Chrysler's Lutz said the meeting indicated "a willingness of American industry to work together in non-competitive areas to get the job done."

Ford also said it will increase domestic content above 75 percent in the Mercury Tracer subcompact, built in Mexico, as well as the Mazda-built Ford Probe. The Probe, assembled in Michigan, will be helped by the addition of a Ford V-6 engine this fall.

The 75 percent level is the cutoff for whether cars sold by domestic makers are counted as imports or domestics for CAFE purposes.

Unlike Ford, GM said it is not going to increase the foreign content of big cars in order to avoid counting those cars in its domestic fuel-economy number.

The Geo Metro, which goes into production this fall at a joint-venture plant with Suzuki in Ontario, will have at least 75 percent North American content, GM said. Currently, the car is imported from Japan.

In addition, the California-built Geo Prizm, produced with Toyota, should reach 75 percent domestic content by 1990 or 1991, GM said.

The changes will help GM meet the higher 27.5-mpg CAFE standard that takes effect in the 1990 model year.

GM will also attempt to move faster with multi-valve engines and to improve the fuel economy of larger cars, officials said.

Under federal rules, cars sold by domestic makers are divided into two separate fleets: one for their "domestic" cars — those with more than 75 percent U.S. and Canadian content — and another for their "imports" — those with less than that amount.

Dissident Don Douglas was defeated in his bid for election as a UAW regional director.

UAW dissidents lose out; Bieber programs hailed

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

ANAHEIM, Calif. — In an impressive display of political power culminating at the UAW Constitutional Convention last week, the union's administration won overwhelming support to expand its cooperative programs with the automakers and bar dissidents from the union's highest levels.

New Directions dissidents, who claim management is undermining the union through the joint programs that emphasize a cooperative rather than an adversarial relationship, said most delegates did not represent the growing frustration of the rank and file.

Dissidents said the power of that plant-floor unrest will grow as joint programs with the automakers fail to stem plant closings and concessions.

But the tangible power demonstrated here overshadowed that prediction.

UAW President Owen Bieber, presiding with new-found forcefulness over the 2,000-member delegation, permitted an airing of dissident objections to UAW strategy that has included cooperative joint programs and the acceptance of the team method of production. New Directions positions and candidates were nonetheless soundly defeated.

LEXUS: *Toyota will jump the gun on introduction of luxury car; sales begin in early August*

By Peter Brown
AUTOMOTIVE NEWS EDITOR

KOHLER, Wis. — The first Lexus luxury cars will be in the hands of some buyers nearly a month before the official introduction on Sept. 1.

Toyota's new luxury channel will start shipping cars to some of its 70 dealers Aug. 2, and those dealers may start selling the cars immediately, said J. Davis Illingworth, Lexus vice president and general manager.

That aggressive launch meshes with the assault Lexus is mounting on the U.S. luxury market: aggressive pricing, aggressive lease terms, and an aggressive warranty and service.

Lexus plans to pursue lease customers by projecting a high residual value for the flagship LS400 sedan. Illingworth said the division assumes a 60 percent residual value at the end of a 24-month lease, and a 52 percent residual value after 48 months.

That high residual value, guaranteed in a closed-end lease through Toyota Motor Credit Corp., would tend to minimize monthly payments because the lessee would be charged for consuming less of the value of the car than if residual values were lower.

In contrast, a lease program by BMW of North America assumes its 535i retains 60 percent of its value after 24 months, or 48 percent after 48 months.

Lexus plans a major leasing pitch for its flagship LS400 sedan.

VW to sell remaining Westmoreland equipment to China

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

Volkswagen AG plans to sell the remaining tooling and equipment from its closed U.S. plant in Westmoreland County, Pa., to a partner in China.

Peter Schelien, a VW spokesman in Germany, confirmed that a contract has been signed between Volkswagen AG and First Automobile Works in the city of Changchun. The agreement calls for removal and shipment of the plant's remaining contents to China. But he said the deal needs final approval from Chinese authorities.

The contract was apparently signed before the violent June 4 suppression of student demonstrations for democratic reform. Thomas McDonald, a Volkswagen of America spokesman in Troy, Mich., said about 30 Chinese nationals arrived in Westmoreland eight weeks ago to undergo training on the equipment and eventually supervise its disassembly and shipment. The process is expected to be completed within six months.

Disclosure of the deal comes at a time other automakers are slow in returning their personnel to China.

While Japanese and U.S. firms withdrew their employees, Volkswagen decided to evacuate only some dependents of German employees. Shanghai-Volkswagen was closed only one day. As a result, Shanghai Mayor Zhu Rongji paid a well-publicized visit to the plant on the outskirts of the city to deliver a personal message of thanks to Burkhard Welkener, the commercial executive director, and his German colleagues.

While production has resumed at the other plants, companies are slow to send back their non-Chinese employees. Chrysler Motors Corp. said it may send back two or three employees in early July to Beijing Jeep, its joint venture with Beijing Automotive Works. Chrysler had eight employees and two consultants at the plant.

Chrysler aims to boost sales with defense work

Paul Wright, Chrysler's defense chief

By Diana T.-Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — When Lee Iacocca regretfully sold Chrysler Corp.'s tank company in 1982 to raise cash, he promised the automaker would be back in the defense business.

Now back in the black, Chrysler has made two key acquisitions, consolidated its operations under the Chrysler Technologies banner and is gunning to take the unit from $1.3 billion in sales last year to $5 billion by 1996.

But during Chrysler's forced hiatus from defense, the business changed. Rather than tanks and missiles, the emphasis is on sophisticated electronics. New disarmament treaties between the United States and the Soviet Union along with budget balancing defense cuts means intelligence — spy, communications systems — are the only growth areas remaining.

So when Chrysler returned to the business with a 1987 acquisition, it has moved with the times, focusing on building military planes and telecommunications systems used for intelligence gathering.

Chrysler moved its new high technology and defense unit, Chrysler Technologies Corp., to Washington — where all the defense spending decisions are made — and hired a former aerospace and communications heavy-hitter last fall, Paul E. Wright, to run the subsidiary. Wright, former president and chief operating officer of Fairchild Industries, reports directly to Iacocca. He works in the same building as Chrysler's government affairs personnel — the lobbyists who are in daily contact with the government and can influence its spending.

The subsidiary is off the ground and growing but not at the expense of Chrysler's real business, which Wright frequently refers to as "the auto company." Chrysler Technologies' mandate is not to become a giant like GM Hughes Electronics Corp. or Ford Aerospace Co., but rather a profitable and highly specialized defense contractor.

"Chrysler Technologies is growing at a moderate pace, is self-funding and operates at a positive cash flow," said Wright, 57, an engineer who has spent his entire career in the aerospace and defense industry, most of it at RCA Corp.

In the year that Chrysler Technologies has been pursuing military contracts, its defense business has increased from just over $10 million to $210.86 million, good for 70th among the nation's top 100 defense contractors. This position is primarily due to the acquisition of Electrospace Systems in 1987. That's still significantly less than the $650 million in sales the tank division had in 1982 when Chrysler sold it to General Dynamics Corp. for $348.5 million.

And it pales in comparison to the $3.6 billion in contracts awarded General Motors and $790 million to Ford Motor Co. during the 1988 fiscal

CHRYSLER MOTORS
TRENTON EN
3.3 LITER

BOB McKEOWN

Chrysler's V-6 is born
Four Chrysler officials display a V-8's worth of fingers for the company's new V-6, a 3.3-liter powerplant being built at the Trenton, Mich., engine plant. The engine will be standard equipment in the 1990 Dodge Grand Caravan, Plymouth Grand Voyager and Chrysler Town & Country minivans and Chrysler Imperial and Chrysler New Yorker Fifth Avenue luxury sedans (story on Page 61). The happy leaders at the press conference last week are Robert A. Lutz, Chrysler Motors president; Richard E. Dauch, executive vice president; John J. "Jack" Fallon, engine plant manager; and Frank M. Clark, general manager of powertrain operations.

SHOT DOWN? *Slow sales of Cadillac Allante may kill costly air-bridge setup*

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — While Cadillac denies it will abandon its novel and expensive air-bridge system of transporting Allante bodies from Turin, Italy, to Detroit, sources confirm the division is talking to land/sea shippers about an alternative method.

The air-bridge system calls for flying Pininfarina-assembled bodies of the luxury convertible from Turin to Detroit. But lagging sales have reduced the thrice-weekly flights to one per week.

The same planes transport shortened Eldorado platforms that serve as Allante underbodies to Turin, where Pininfarina assembles and paints the bodies and installs the interiors. The cars are then air-freighted back to Detroit, where production is completed at General Motors' Detroit-Hamtramck plant.

Sources in Europe say Cadillac is looking at land/sea transport and that it may abandon the air-bridge as early as the 1990 model year.

The air-bridge has been lauded by GM and Pininfarina because it minimizes transit damage. But sources here say the system is proving too expensive for Allante's low volume. Instead, they say, Cadillac will probably decide to transport the bodies by truck in specially designed containers to Bremerhaven, West Germany, and then ship them to America by sea.

"... our plans still call for continuing the air-bridge. We have a long-term contract with the air carriers."

But no trucking contract has been awarded.

A Cadillac spokesman denied that there are any plans to change the transport system.

"We're always reviewing parts of our business, but our plans still call for continuing the air-bridge. We have a long-term contract with the air carriers," he said.

The original plan called for three weekly flights to Detroit carrying 56 Allante bodies per plane on Italy's Alitalia and West Germany's Lufthansa airlines. The schedule was based on expected annual production of 6,500 to 7,000 Allantes. A fourth flight was to be added when production hit 8,000.

But Allante's low sales volume has required only one flight per week — on Alitalia. Allante sales in the first five months of 1989 totaled 1,398, down from 1,454 in 1988. Total sales in 1988 were 3,065, up from 2,517 the year before. Allante's 1989 production in Hamtramck through June 24 totaled 1,588, up from 1,135 for the same period in 1988. Production in May was 225 units.

"They are studying other possibilities, but I don't think any decision has been made," said Pininfarina S.p.A. spokeswoman Lorenza Pininfarina. "That is a question better asked of Cadillac."

She said Allante production at Pininfarina is proceeding at the rate of 13 units per day.

T-Bird/Cougar ex-boss reviews development woes

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — The early retirement of the man who headed the team that created the new Ford Thunderbird has focused attention on some pressing product development problems inside Ford Motor Co.

Tony Kuchta, 58, left the company May 31. And last week, after 32 years at Ford, he was toasted at a sell-out retirement party.

But his program was also the subject of some critical attention from Ford's senior management. Earlier this year, after the Thunderbird Super Coupe picked up Motor Trend magazine's Car of the Year award, the Thunderbird/Cougar team was summoned to a meeting with four top officers.

At that meeting the Ford brass chastised the team for overshooting targets on cost and weight. The session also carried a message for the rest of Ford's product development troops: If you sign on to meet a target, you'd better meet it.

Insiders say the meeting was led by Vice Chairman Harold Poling and also included Chairman Donald Petersen, Executive Vice President Philip E. Benton Jr. and Max Jorsek, Ford's vice president of car product development. It was not the first sign that all was not well with the program.

Kuchta

The development process exposed a range of weaknesses, including gaps in tracking costs, a shortage of manpower, surprise quotes from suppliers, and confusion over the project's mission. The magnitude of the cost overruns, Kuchta said, wasn't realized until less than a year before Job 1.

Some of the problems aren't exclusive to this program. As the Thunderbird/Cougar wind up their first model year on the market, the company is conducting an internal study to find out why product development targets are missed.

There is some feeling within Ford that Kuchta's departure was linked to senior management's displeasure with the program. Others say there was no connection, that after 32 years in Ford engineering trenches on three continents, Kuchta — a father of eight and grandfather of nine — had earned the right to call it quits.

Kuchta says it was his idea. "I asked to retire," he said in a telephone interview. "I wasn't asked to."

Despite the program's troubles, Kuchta is bullish about Ford, the Thunderbird and Cougar, and the company's new approach to product development. Many of the problems his team faced have been resolved, he said. Others have been identified and will be settled in future programs.

Kuchta believes the troubles stemmed in large part from a system that was trying to adapt to that new way of developing cars. As the first all-new cars launched after that change (the 1988 Continental was derived from the Taurus/Sable), the Thunderbird and Cougar

Pilot models roll for Ferrari 348; September intro slated

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

MARANELLO, Italy — Ferrari's new 348 replacement for the 328 two-seater is in pilot production. But despite talk of a launch this summer, company officials say the car won't be unveiled until the Frankfurt auto show in September.

Meanwhile, a new front-engine Ferrari coupe that will replace the four-place 412 will be introduced in 18 to 24 months, according to sources here.

Ferrari gave a small group of journalists a first look at the new two-seater on the production line, though it banned cameras.

Ferrari reportedly considered introducing the car before the Frankfurt show to avoid being overshadowed by BMW's 850i coupe. But company officials said it will debut at the German show.

Some 50 to 70 units of the 348 will be finished in time for the launch. The car will go on sale in Europe early this fall and is expected to be available in the United States four or five months later.

The 348 succeeds the 14-year-old 308/328 range that has been Ferrari's best-selling model. Last year, Ferrari delivered 1,863 328GTB/GTS models worldwide, including 544 in the United States. The 348 is expected to sell at about the same rate.

The new car is long overdue. Spy photos date back at least three years and the car was once expected to bow at the Frankfurt show in September 1987.

Total Ferrari sales in 1988 were 3,940, compared to 3,956 the year before. In addition to the 328GTB/GTS models, last year's total included 1,053 Testarossas, 511 Mondials, 379 208s for the Italian market only, 91 412s and 43 F-40s.

U.S. deliveries last year totaled 1,027, including 544 328GTB/GTS models, 346 Testarossas and 137 Mondials. The 1987 total was 1,054.

As with the 328, the new two-seater will be offered both in coupe and targa versions. The Pininfarina design, with its intake slats on the flanks, bears a strong resemblance to the larger, 12-cylinder Testarossa. The wheelbase of the new car is almost four inches longer than the previous model at 96.4 inches, and width is 2.8 inches greater at 68.1 inches.

HIDDEN IMAGE/HANS G. LEHMANN

Ferrari's long-awaited 348 model bears a close resemblance to the larger 12-cylinder Testarossa.

A Ferrari official here said the car has a lower center of gravity than its predecessor because the engine is mounted five inches lower.

Power comes from a new 3.4-liter 32-valve version of the existing Ferrari V-8, which debuted earlier this year in the 2+2 Mondial T. The engine, which develops 300 horsepower, is mounted longitudinally, instead transversely as in the previous model. Unofficial top-speed estimates for the 348 range as high as 175 mph.

Production of the 328 will end this summer, and the 412 coupe is also being phased out. Production of the 412 for all of 1989 is expected to total no more than 35 units, down from 91 in 1988.

But a new front-engine coupe replacement, to be dubbed the 512, won't be introduced for 1½ to two years, a Ferrari official said.

The 512 is expected to get an all-new five-valve-per-cylinder V-12 engine that reportedly will develop about 360 hp. The same powerplant will eventually be fitted in the mid-engine Testarossa.

N.Y. targets auto leases with high termination fees

By Helen Kahn
SENIOR CORRESPONDENT

New York Attorney General Robert Abrams has asked the state legislature to curb exorbitant early-termination charges on auto leases. He said a study by his office shows that excessive penalties are being charged for early termination in as many as 80 percent of long-term leases.

The year-long analysis of 10 major lease firms operating in the state led to three legislative proposals:

- Limit consumer payments for ending a lease early.
- Limit consumer liability if the leased car is destroyed or stolen.
- Require a leasing company to give consumers a chart disclosing how much it would cost on a month-by-month basis if the lease is ended early.

Abrams claimed that many companies extract huge penalties instead of limiting early termination payments to amounts that offset a company's reasonable losses.

"Early termination clauses that subject consumers to extraordinary penalties are commonly written in mind-boggling legalese and are beyond the comprehension of virtually all consumers," he said.

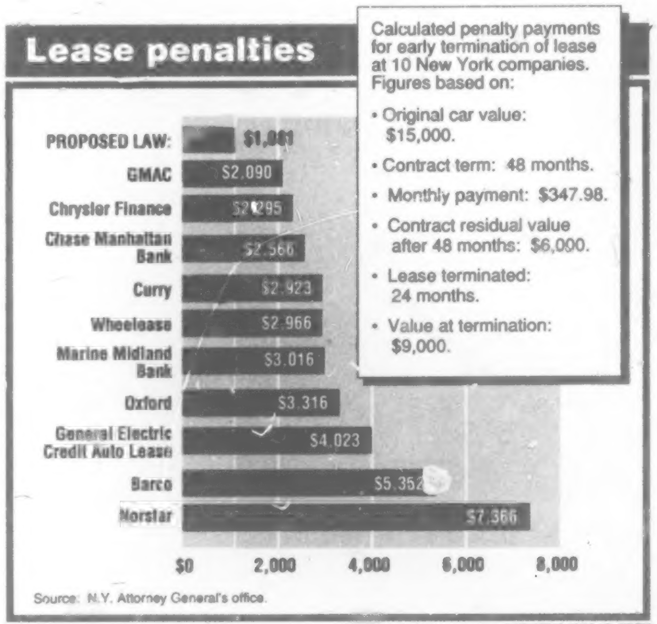
A typical lease in the attorney general's study used a car worth $15,000 and a 48-month contract with monthly payments of $347.98 and a residual value of $6,000 at the end of the term.

The analysis shows how much the consumer would have to pay if he/she terminated the lease after two years with the car's value calculated at $9,000. Consumers would be faced with payments ranging from $2,090 to $7,366.

Abrams proposed a law that would limit liability of a consumer with such a lease to $1,080.74, an amount his office figures is the difference between the value of the vehicle at the time it was leased and its retail value at the time of early termination. The calculation gives the consumer credit for payments made toward the vehicle's depreciation.

In the case of a stolen or destroyed vehicle, Abrams said that since insurance covers the loss, the consumer facing an inadvertent early termination should be liable only for the insurance policy deductible.

As an alternative, Abrams proposed that leasing companies offer consumers the choice of paying an extra reasonable charge to cover the risk of any deficiency between the insurance proceeds and the amount the lessor claims under the lease.



Calculated penalty payments for early termination of lease at 10 New York companies. Figures based on:

- Original car value: $15,000.
- Contract term: 48 months.
- Monthly payment: $347.98.
- Contract residual value after 48 months: $6,000.
- Lease terminated: 24 months.
- Value at termination: $9,000.

Chrysler adds air bag to models

HIGHLAND PARK, Mich. — Chrysler Motors said air bags will be standard equipment on 16 car lines, representing about 1 million units in the 1990 model year.

The models include almost all Chrysler models built in the United States and one import, Chrysler's TC by Maserati.

The U.S. models are Chrysler Imperial, Chrysler LeBaron coupe and convertible, Chrysler New Yorker Landau, Chrysler New Yorker Fifth Avenue, Chrysler New Yorker Salon, Chrysler LeBaron sedan, Dodge Dynasty, Dodge Daytona, Dodge Spirit, Dodge Shadow, Dodge Omni, Plymouth Acclaim, Plymouth Sundance and Plymouth Horizon.

The Eagle Premier and Dodge Monaco, which are built in Canada; Plymouth Laser and Eagle Talon, built by Diamond-Star Motors in Normal, Ill.; and imported cars other than the TC will be equipped with motorized belts.

Chrysler made driver's side air bags standard equipment on six car lines late in the 1988 model year. The company estimates it will have produced more than 250,000 cars with the device by the end of the 1989 model year.

The company said all its 1990 U.S.-built cars, including Laser and Talon, will be equipped with integral lap and shoulder restraints for outside rear-seat passengers.

Chrysler said four-wheel anti-lock brakes will be standard on Chrysler Imperial and Chrysler's TC by Maserati and optional on the New Yorker Fifth Avenue, New Yorker Landau, New Yorker Salon and Dodge Dynasty.

Four-wheel anti-lock brakes will be optional on Jeep Cherokee, Cherokee Limited and Wagoneer Limited sport-utility vehicles.

Rear-wheel anti-lock brakes will be standard on eight Dodge pickup truck models, eight full-sized vans or wagons and Dodge Ramcharger.

Reseda awarded $2.9 million in IDFC dispute

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Reseda Finance Corp., a California-based finance company, has been awarded $2.9 million in damages by the American Arbitration Association in a dispute with its marketing firm, International Dealer Financial Corp.

Officers of International Dealer Financial attended the arbitration hearings, apparently representing themselves, according to Reseda's attorney, M. Edward Franklin.

Whether International Dealer Financial in Carlsbad, Calif., is still operating is unknown. Repeated attempts by Automotive News to reach the company were unsuccessful.

Barry A. Kritzberg, president and chief executive of Reseda, said the award vindicates his company even though it has lost profits and business since the imbroglio began nearly a year ago.

"The most important thing is that Reseda Finance has been vindicated," Kritzberg said. "The way we do business and what our intentions are have been vindicated."

Reseda purchases high-risk retail automotive contracts from car dealers. It has about $100 million in its loan portfolio, Kritzberg said.

Last July, International Dealer Financial filed suit against Reseda and some of its officers in Los Angeles County Superior Court, charging breach of contract, conversion and unfair competition.

But the judge ruled the dispute should be heard by the American Arbitration Association because of the binding arbitration clause in the contract.

Under the contract, International Dealer Financial would act as a "buy center" for Reseda, acquiring retail sale and lease contracts from car dealers for buyers with marginal credit.

Subsequently, new-car dealers complained they were stuck with the cost of sold vehicles. They alleged that International Dealer Financial failed to fund them.

International Dealer Financial blamed Reseda for not purchasing contracts that the marketing firm had solicited from dealers and provided for funding, while Reseda blamed International Dealer Financial for not giving Reseda sufficient advance notice about the amount of funding that would be needed to purchase the contracts.

According to the arbitration award, International Dealer Financal and its parent, U.S. Video Com, violated the terms of the agreement. The arbitrator said International Dealer Financial's "acts resulted in false and erroneous information being circulated in the automotive sales industry all to the detriment of the claimants (Reseda)."

Now, Reseda will ask the court to enter the arbitration award as a judgment against International Dealer Financial.

Mack Truck unveils E7, new line of sixes

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Mack Trucks has introduced its E7 engine family, a new six-cylinder series that will be used in most of the Class 8 vehicles it designs for local and long-distance hauling and refuse and construction work in the 1990s.

Mack supplies about 95 percent of its own engines, according to Terry L. Warmkessel, director of marketing and product planning. The company is the third-largest Class 8 engine producer behind Cummins Engine Co. and Caterpillar Inc., based on Motor Vehicle Manufacturers Association data.

Warmkessel said the new 12-liter, six-cylinder engines feature improved fuel economy and extended horsepower ranges over the E6 series, which will be discontinued in December 1990. Mack plans to begin producing a portion of the E7 family in July.

All E7 engines have been certified for use in 50 states and Canada. They will "serve as the foundation for much of Mack's powertrain evolution in the next decade," Warmkessel said.

The E7 initially will be produced with four separate horsepower ratings: the EM-250, 250 horsepower at 1,750 rpm and 58 percent torque rise at 1,020 rpm; E7-300, 300 hp at 1,750 rpm with 58 percent torque rise at 1,020 rpm; E7-350, 350 hp at 1,800 rpm and 25 percent torque rise at 1,250 rpm; and E7-400, 400 hp at 1,800 rpm with 25 percent torque rise at 1,250 rpm.

All have chassis-mounted charge air cooling and advanced turbocharging and are available with Maxidyne high torque rise or conventional torque rise engines.

Mack will begin producing the E7-300 series in October. That is a conventional torque rise engine that does not produce as much horsepower as the Maxidyne but delivers higher fuel economy.

In January 1990, it will begin producing three additional models, including another version of the E7-300 for application with automatic transmissions.

General Motors' Allison transmission division has had several delays in introducing its new world transmission. GM's current automatics cannot handle the 1,700- to 1,800-rpm cruising level in the over-the-road engines Mack and other manufacturers offer or are planning to introduce. So Mack will provide an E7-300 with 300 hp at 1,950 rpm to fit the current Allison automatic.

Mack also will offer an E7-425 with 425 hp at 1,800 rpm and an additional Maxidyne version, the EM7-275, with 275 hp at 1,750 rpm. Other versions are planned.

The E7 is based on the E6, the most popular Mack engine, which the company redesigned to generate higher horsepower and meet 1990s emissions standards.

Mack increased engine displacement for more power output capacity, raised peak cylinder pressure to extract improved operating efficiency and incorporated a new engine cooling system with a wet/dry cylinder sleeve design, Warmkessel said.

The latter design feature represents a major difference between the E7 and E6 engine blocks. In the E7, the coolant flows around the cylinder sleeves, providing a "wet" area at the top where temperatures are lower and actual coolant passages are unnecessary.

The arrangement provides improved cooling efficiency and structural integrity, along with a significant weight saving due to three fewer gallons of engine coolant and one less wall of cast iron, the company said.

The engines have higher cylinder pressure capabilities, permitting increased levels of fueling and turbocharging, with flexible injection timing. That allows higher horsepower ratings, increased operating ranges and better fuel economy.

The E-7 does not require a particulate trap to meet 1991 emission standards.

BRIEFS

Wabco ABS for trailers

SOUTHFIELD, Mich. — Wabco Automotive Products Group, a major manufacturer of anti-lock brake systems for heavy-duty trucks, has introduced an anti-lock brake system for trailers.

The system is designed for use by original-equipment manufacturers or to retrofit existing trailers. It is available in a range of configurations from two-sensor/one-valve designs to six-sensor/three-valve designs.

The anti-lock brake system is designed to work with any tractor.

Truck cap group formed

NORTH BETHESDA, Md. — Dealers, manufacturers and suppliers to the truck cap industry have formed the Truck Cap Industry Association.

The group plans to hold annual meetings, the first scheduled in February 1990. The association will be headquartered in Maryland.

Members of the group's executive committee are: Dillard Fletcher, 20th Century Fiberglass, Elkhart, Ind., president; Dave Frank, A.M.A. Truck Toppers, Omaha, Neb., first vice president; Dave Wright, Durakon Industries, Lapeer, Mich., second vice president; and John Steel, Tri-Glass Industries, Daleville, Ala., secretary.

Also: Carl Silva, Tri-County Truck Tops, Algonquin, Ill., treasurer; Ron Moquist, Glasstite Industries, Dunnell, Minn., director; and Chuck Morrison Jr., Cap City U.S.A., Waldorf, Md., director.

Frank W. Brown is the association's executive director.

Chicago truck show

The third annual Central States Truck Show, scheduled Nov. 10-12 at Chicago's McCormick Place North, will have a 250 percent increase in exhibit space.

Considered one of the top five truck shows nationally, it will feature more than 400 national and regional exhibitors, such as Nissan Diesel America, Navistar International and WhiteGMC. Technical seminars also are planned.

The Illinois Trucking Association expects 20,000 to 25,000 persons to attend.

U.S. parts gain in import aftermarket

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Domestic parts makers have gained momentum in their campaign ~~to~~ capture the lion's share of the import-car aftermarket, according to a Frost and Sullivan study.

The study estimated that in 1987, domestic parts manufacturers had 39.1 percent of the import-car aftermarket and by 1993 they will have 44.8 percent. That fast-growing market comprises accessories, batteries and chemicals as well as replacement parts for cars and light trucks.

According to the New York-based research firm, domestic parts makers are pulling ahead in that market because second and third owners of foreign cars have no connection with the original new-car dealership and its service department. Those owners go to local gas stations or garages for service and repairs.

Most of the replacement parts the gas stations and garages order — such as filters, belts, hoses, water pumps and alternators — come from U.S. parts manufacturers, Frost and Sullivan said.

The U.S. aftermarket for imported cars and light trucks is growing more than three times as fast as the aftermarket for domestic vehicles, Frost and Sullivan said.

The study puts the size of the aftermarket at the importer-manufacturer level at $5.57 billion in 1987 and forecasts expansion to $9.34 billion in 1993. Frost and Sullivan expects sales at the retail level to spiral from $13.5 billion in 1987 to $22.7 billion in 1993.

In an analysis of all phases of that burgeoning market, the study concludes that domestic parts manufacturers, with their 44.8 percent market share, will be dominant by 1993, overtaking the parts suppliers of foreign-vehicle manufacturers, whose market share is expected to shrink from 46.6 percent in 1987 to 42.7 percent in 1993.

According to Frost and Sullivan, that shift in market share is not expected to happen automatically.

The study points out, "Import vehicle manufacturers' parts systems have taken aggressive strides toward becoming parts wholesalers to independent aftermarket channels." During 1985-87, they actually increased market share despite the declining dollar by absorbing cost increases from their offshore suppliers. Those expensively bought advances will surely be defended vigorously, Frost and Sullivan said.

To meet the challenge, Frost and Sullivan said, domestic parts makers must commit more of their budgets to marketing and education, particularly educating those installers who shy away from fixing foreign vehicles.

The research firm noted that foreign vehicles will soon make up 30 percent of the repairs as more and more reach prime repair age (three to 10 years) in the next five years.

The growing size of the import aftermarket — especially as more vehicles leave the warranty cycle and are sold to second and third owners — is a major factor favoring the domestic parts makers, Frost and Sullivan said.

Niche players, such as expediters and specialty importers, also are doing well in the aftermarket, according to the study, but that category as a whole is expected to lose market share, from 14.3 percent in 1987 to 12.5 percent in 1993.

The 196-page study also analyzes the outlook for individual products in the marketplace.

As an example, the market for ball and roller bearings is expected to decline from $31 million in 1987 to $27 million in 1993, in part because of "lubed for life" wheel bearings, Frost and Sullivan said.

But timing belts, according to Frost and Sullivan, tend to fail at around 30,000 miles — one of the factors in the bullish market for valve and valve train components, which is expected to rise to $90 million by 1993 from $53 million in 1987.

Ford job fairs hunt dealer mechanics

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — Ford Motor Co. is conducting job fairs across the United States to help its dealers recruit skilled technicians.

"The Dealership Service Technician Job Fair will be a one- or two-day event at which Ford parts and service division personnel will help dealers find the help they need for their service departments," said Tom Kubeshesky, the division's project manager for service and planning and development.

"The goal of the program is to attract both experienced and entry-level service technician candidates for interviews at the job fair with dealership management personnel," Kubeshesky said.

He said the job fairs will be advertised in local newspapers and on radio and television. Applicants will be screened and tested, then directed to appropriate dealers at the fair for interviews. Applicants will be directed to a given dealer based on qualifications, geographic location, applicant preferences and dealer need.

"Dealers are always looking for good service technicians, or people with the potential to become good technicians," Kubeshesky said. "Ford and Lincoln-Mercury dealers have a special need to recruit new employees because of the sales success they have enjoyed for several years in a row."

The first job fair, sponsored by 23 Ford and Lincoln-Mercury dealers in the Atlanta area last week, attracted "more than 136 highly qualified applicants" for some 70 job openings, Kubeshesky said.

Eight technicians were hired on the spot at the Atlanta job fair, while 46 others made appointments for second interviews at dealerships, Kubeshesky said.

A dealer said the job fair "is the best thing Ford Motor has ever done for dealers in the 25 years I have been in business."

The second job fair is slated for the Los Angeles area, but dates have not been set, Kubeshesky said.

He said the Atlanta fair was the first for Ford Motor in the service area.

"Job fairs have been used by other departments, such as sales and engineering, to recruit employees, but never before in service," he said.

Chuck Clancy of Chuck Clancy Ford in Marietta, Ga., was enthused about the Atlanta fair.

"Being highly skilled and technically proficient are the new requirements for today's automotive technicians," Clancy said. "Gone are the days of the do-it-yourselfers and the shade-tree mechanics. We have an obligation to make service more accessible to our customers."

Experienced service technicians (except those currently employed by Ford and L-M dealerships), mechanics, recent vocational school graduates and related industry technicians are being invited to attend the job fairs, Kubeshesky said.

"The fair is not intended to be a raid on service personnel at other dealerships," he said. "I don't know of any dealer who accused us of raiding in the Atlanta labor market. As a matter of fact, employees shift from dealership to dealership on a daily basis."

Registrations in the Atlanta area indicate that a majority of the applications will come from technicians in independent garages and related industries who want to upgrade themselves and get better jobs, Kubeshesky said. Several applicants, he said, were Eastern Airlines mechanics who are on strike, he said

Applicants who provide documentation that they have been certified by the National Institute for Automotive Service Excellence will not be required to take the test, Kubeshesky said.

Dick Blanc, Atlanta parts and service district manager said steadily-increasing sales are a major reason for the greater demand for skilled technicians.

"Total repair shop work, both parts and labor, has increased 25 percent during the last two years," Blanc said. "There's a great demand for service work in the Atlanta area."

Clancy said Ford's emphasis on customer satisfaction has encouraged many Atlanta-area dealers to increase their service department operations.

"For most dealers, that means hiring more technicians," said Clancy, who plans to add another shift so that he can extend his service hours. "We need to work the hours in the day that our customers prefer, not just the hours we want to be open."

At long last, a bit of success

Reporter beats some of the kids in Plymouth Trouble Shoot

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — It took several years, but I finally managed to repair a car faster than some of the high school kids participating in the Plymouth Trouble Shooting Contest.

The contest, co-sponsored by the American Automobile Association, is an annual event to determine which team of the two best high school automotive technicians from each state and Canada can repair a car quickest. The students also take a written test of their knowledge of automotive repair. In the finals here, each team was charged with the repair of a 1989 Plymouth Acclaim equipped with a 2.5-liter, fuel-injected, four-cylinder engine and identical malfunctioning parts.

For several years, I have participated on a demonstration team, the purpose of which is to point out the ineptitude of untrained technicians. But this year, Glenn T. Minami, an automotive technology industrial education instructor from Kaiser High School in Honolulu, was my partner. The fix was in.

Minami led his students to the Hawaii state championship from 1984 to 1987.

It took Minami only 35 minutes to lead the repairs on the Plymouth Acclaim. With a methodical approach, he assembled and installed the distributor and found a faulty wire to the fuel injector. Meanwhile, I replaced a fuse for the dashboard lights, replaced the right front headlamp bulb and found a loose vacuum line hose. We were working like a well-oiled machine. The car still wouldn't start, and the first of the high school teams had their cars up and running.

It turned out, as Minami soon found, that the distributor pick-up sensor was faulty. In the electronic labyrinth of modern computer-controlled engines, that not only prevented the spark plugs from sparking, but also prevented the fuel injector from injecting.

We replaced the sensor, timed the engine and buttoned it up, only about 15 minutes behind the fastest team of Glenn Tagawa and Mason Namiki from Kaimuki High School in Honolulu.

The overall winners, based on their scores in both the written test and the hands-on repair competition, were Mike Seresun and Walter Yagen of Ingraham High School in Seattle. They repaired their car in 36 minutes, and each won a choice of a $2,500 scholarship or savings bond.

Their instructor, Richard Thompson, received the AAA President's Cup.

Steve Marschke of the Bismarck Public School Vocational-Technical Center in Bismarck, N.D., won the Lee A. Iacocca Scholastic Achievement Trophy and a $5,000 scholarship for scoring the highest marks on the written test.

Archie Romney, an instructor for the Arizona team from Sahuarita High School in Sahuarita, was named the Automotive Teacher of the Year by Valvoline Oil Co., based on his students' scores in the state competition and national written test. He also won the teacher's award in 1986 and 1987.

Head gasket omits flanges

BIRMINGHAM, Mich. — Victor products division of Dana Corp. has developed a "flangeless" automotive cylinder head gasket. The company said it will improve engine efficiency.

According to John Damusis, Victor engineering director, the new gaskets do not require metallic elements such as the steel flanges or grommets that are used on traditional head gaskets to seal an engine's combustion opening.

The gasket, Damasis said, helps minimize cylinder bore distortion, thus reducing the amount of piston wear that occurs during normal engine operation. He said that in light-duty applications, the Victor flangeless head gasket reduced bore distortion 35 percent.

Damusis said more than 2½ years of research and development were devoted to the new product.

He said it is 10 percent less expensive than a comparable gasket with steel combustion flanges. Similar flangeless head gasket designs are currently used in air-cooled engines, exhaust manifolds, intake manifolds and for throttle body mounting applications, he added.

The new Victor gasket is available for V-6 gasoline engines. Plans are under way to expand coverage to other light- and heavy-duty applications.

Shop volume returns to plus side

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

April service and parts business for new-car dealers bounced back from a decline in March and topped the volume in April 1988.

According to the Automotive News Service Index, shop volume in April rose 1.3 percent over the year-earlier month. The gain followed a year-to-year decline of 1.7 percent in March.

For the first four months of 1989, the index was up 0.04 percent.

The service index is compiled from figures on parts and service operations supplied by a cross-section of dealerships throughout the United States.

Repair orders written dipped 3.3 percent in April from the year-ago month and 3.5 percent for the first four months of this year.

Still, gross profit on all labor, parts and accessories sales was up 2.3 percent in April and for the year-to-date period.

Sales of all parts and accessories in April were 2.5 percent ahead of the volume for the same month a year ago, but dipped 0.4 percent for the first four months of 1989.

Total labor sales (customer paid and warranty) slipped 0.6 percent in April, but four-month volume was 2.5 percent above last year's.

Shop parts sales (customer paid and warranty) were off for April but up for the year-to-date. The April dip was 2.2 percent, and the four-month gain was 1.9 percent.

SERVICE INDEX
101.3*

	April '89 vs. April '88	4 mos. '89 vs. 4 mos. '88
Gross Profit on All Labor and P&A Sales	+2.3%	+2.3%
Repair Orders Written	−3.3%	−3.5%
Total Labor Sales (Customer & Warranty)	−0.6%	+2.5%
Shop Parts Sales (Customer & Warranty)	−2.2%	+1.9%
Sales of All P&A...........	+2.5%	−0.4%

* Survey by Automotive News shows that dealers' service and parts business in April 1989 was 101.3 percent of business in April 1988. Service business in the first 4 months of 1989 was 100.0 percent of business in the corresponding period in 1988.

New Georgia program updates technicians

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

Georgia has joined Ohio and Florida in launching a new statewide automotive technical training program designed to bring auto technicians up to date.

The program will provide Automotive Service Excellence certification to technicians through 29 schools around the state, starting this year.

The four-part curriculum will focus on computer command systems, steering and suspension componentry, fuel injection systems and auto electronics.

In all three states, the continuing education program deals primarily with state-of-the-art technical issues rather than introductory technical classes, according to a program spokesman.

Approximately 7,000 technicians already have been certified in Ohio and Florida, where 32 vocational schools and two-year colleges have been conducting a pilot program since 1987. Ohio is expected to certify another 3,000 technicians this year.

According to program directors, long-range plans call for an eventual nationwide introduction of the program on a state-by-state basis. Vocational education officials in California and Kentucky are studying the concept, which is promoted by the National Automotive Technicians Education Foundation in Reston, Va.

"The technical training issue is extremely important right now," said Louis Rice, a member of the Georgia Board of Technical and Adult Education and senior vice president of Atlanta-based Genuine Parts Co. "And the state vocational education system is probably the best resource we have in America for distributing that training and improving the technical skills of our adult work force."

Rice illustrated the need for updated technical skills by citing his own company. Genuine Parts wholesales a line of about 125,000 auto parts to 6,500 National Automotive Parts Association stores around the country.

"Five years ago, half the parts we now carry didn't even exist," he said. "Obviously, someone working at a dealership or an independent service center who was trained five years ago needs to be brought up to date. Where better to do it than at a school in his own city at night or on the weekends?'

A National Automotive Technicians Education Federation spokesman said service industry surveys have indicated that technicians typically are willing to seek training updates only if they are available in their own city without disrupting regular work hours.

Automotive Service Excellence certification, which is also required of the state program instructors, is granted to participants after completing a specified number of course hours in a subject. All states, except Connecticut, Hawaii, Louisiana and Rhode Island, participate in Automotive Service Excellence education on some basis.

The foundation spokesman said assistance was available to any state vocational education board interested in launching the program.

Nissan expands PRO CAP

CARSON, Calif. — Nissan Motor Corp. in U.S.A. has donated 43 cars to 38 Southern California high schools and community colleges for use in automotive education.

The donation kicked off the Southern California phase of the national Professional Apprenticeship Program, which Nissan calls PRO CAP. It is a cooperative effort between community colleges, Nissan and its dealers.

The program, which will be run through Long Beach Community College, will select and train apprentice technicians while they are still in school and will provide them with employment at a Nissan dealership. Upon completion of the training program, the student will receive an associate of arts degree in automotive service technology.

Nissan said its donation will provide students with vehicles equipped with the latest in automotive technology.

"This program began last year in Arizona and has proven to be remarkably successful," said Ted D'Orazi, field service manager for Nissan's Los Angeles region.

"Right now, there is a deficit of more than 100,000 qualified automotive technicians throughout the United States" he said. "This program, which is now expanding to each of our 11 regions, should help alleviate this shortage."

Shop management is ASTN topic

BIRMINGHAM, Ala. — Automotive Service Consultants and Automotive Satellite Television Network of Dallas, have co-produced a weekly series on one of the most competitive areas within the auto dealership — the service department. The series will run for a year.

Called "Service Management," it will begin July 5 on ASTN's "Shop Talk" program. For dealers who wish to participate, Automotive Service Consultants will track service department performance during the series to monitor improvements, according to William Whitehead, vice president of Automotive Service Consultants. ASTN will provide forms to help service managers implement new strategies.

Targeted toward the dealer principal, service manager and service adviser, the initial 17-week series will feature variable rate structures, job pricing guides, shop loading and dispatching and traffic building, said Mitchell Smartt, producer of the show.

Two other series will cover service profitability and shop productivity. The program also will outline price-competitive strategies and merchandising to recover revenue franchised dealers have lost to specialty service operations, ASTN said.

Import sales down 7%; 5-month total off 98,115

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Imported-car sales firmed a bit in May compared to 1989 as a whole, but importers posting volume losses continue to outnumber gainers.

Import sales totaled 259,737 in May, off 9,529, or 3.54 percent, from May 1988. Calendar 1989 sales were 1,151,916, down 98,115 or 7.85 percent from the first five months of 1988.

Japanese-branded imports are faring well this year, domestic automakers' Asian-built captive imports are holding their own and Europeans are generally down.

On a percentage basis, the three biggest losers are Yugo, Maserati and Porsche. Yugo was off 62.71 percent in May to 936 units and down 70.64 percent to 4,267 cars for five months as its Chapter 11 woes continue.

Maserati fell 66.27 percent in May to only 28 cars and was off 56.05 percent to 139 units for the year. Porsche slowed its bleeding in May, down 23 percent to 1,003 sales, but still had only 3,600 sales through five months, down 50.36 percent.

Sterling posted a slight sales improvement in May using heavy incentives. It was up 3.32 percent to 653 cars, but it was down 34.12 percent for five months.

Alfa Romeo and Hyundai both posted May sales in line with the rest of this year and were down 34.10 percent and 31.30 percent, respectively, for 1989.

After a 26.18 percent drop in May, Mercedes-Benz was down 18.73 percent for five months to 29,186 cars. Audi was down 20.38 percent to 7,413 units for the year after cutting the May slippage to 12.32 percent.

Merkur and Saab, down 13.28 percent and 12.09 percent, respectively, closed out the import-only companies posting sales losses greater than the market.

Five imports — Subaru, Peugeot, Volkswagen, Jaguar and Isuzu — basically broke even for the first five months, showing absolute sales losses but no worse than or within a percentage point of average market performance.

May was a tough month for all five, with percentage losses ranging from 8.79 percent for Jaguar to 22.91 percent for Peugeot. For both Peugeot and Subaru, which was down 19.78 percent, May slumps wiped out sales gains for the first four months of 1989.

Captive import cars — Chrysler-branded products built by Mitsubishi in Japan, Ford Festiva built by Kia in South Korea, Pontiac LeMans from South Korea's Daewoo and Chevrolet's Isuzu-built Spectrum and Suzuki-built Sprint — also were close to market average as a group. Together, they were off 2,469 units or 7.16 percent to 32,028 in May and off 9.83 percent to 148,757 cars for five months, about 2 percentage points more than all imports.

Seven non-captive marques showed up on the positive side for five months.

The only Europeans to make the list were Volvo and BMW. Volvo gained 10.62 percent to 9,258 cars in May and 7.12 percent to 43,348 cars for five months. BMW, in contrast to rival Mercedes, rose a modest 1.31 percent for the year to 29,008 cars despite being off 1.92 percent in May.

Daihatsu posted gains of 33.22 percent for May and 31.94 percent to 5,622 cars for 1989.

Other Japanese gainers were Acura (up 24.63 percent in May and 14.16 percent for five months), Nissan (29.68 percent and 11.85 percent), Mitsubishi (35.85 and 8.76 percent) and Honda (31.78 and 1.33 percent). The Nissan, Mitsubishi and Honda numbers include imported-car sales only.

May sales flat; long-awaited European dip may be near

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — European new-car sales slowed in May, but the total for the first five months remained ahead of last year's.

Fiat S.p.A. continues to hold a firm grip on first place among carmakers, while General Motors, on a percentage basis, is growing at a faster rate than the other five full-range manufacturers in Europe.

Combined sales in 17 Western European countries were up only 0.44 percent in May — the second time in the last three months that growth has been relatively flat compared with the year-earlier period. This suggests that the long-expected slowdown in the European market may be at hand.

May's volume totaled 1,185,900 units, according to industry estimates compiled by Automotive News, up from 1,180,700 during May 1988.

January-May sales climbed 6.54 percent to 6,105,900 units, increasing from 5,731,000 during the five-month period last year.

In 1988, Western Europe's calendar-year sales finished at a record level of just under 13 million units.

Fiat, which ended 1988 nearly tied for first place with Volkswagen Group, boosted sales 3.5 percent in May to 181,500 units, primarily on the strength of sales in Italy where it holds about 60 percent of the market.

For the five-month period this year, Fiat sold 962,700 units, a 9 percent rise, giving it a 15.8 percent market share. The Fiat total includes Fiat, Alfa Romeo and Lancia brands.

Second-place Volkswagen Group, including Audi and Seat, was up 2.4 percent in May to 181,300 units. VW sold 884,900 units in the January-May period, an increase of 7.5 percent over the year-earlier period. It holds 14.5 percent of the market.

May sales at France's Peugeot S.A. fell 2.8 percent to 145,000 units as the French market declined 7.5 percent overall. PSA, including the Peugeot and Citroen brands, remains 9.4 percent ahead of 1988's pace for the five-month period with sales of 798,500 units. It holds a 13.1 percent market share in Europe.

Ford holds fourth place with an 11.3 percent share. Sales increased 5.3 percent to 691,400 units in the first five months. In May, Ford's sales rose a mere 0.1 percent to 141,500 units. May sales in the United Kingdom, the automaker's biggest European market, slipped 8.6 percent to 54,400 units.

GM, helped by the success of its new Opel Vectra/Vauxhall Cavalier compact, recorded sales of 669,600 units for the five-month period, a gain of 10.1 percent. The automaker held a 11 percent share. Last year, GM finished with a 10.6 percent share in Western Europe.

GM's sales were up 5.5 percent in May to 130,300 units.

Renault was hurt by the falling French market: May sales slipped 9 percent to 107,400 units. For the January-May period, Renault is 5.8 percent ahead of 1988's pace. Its five-month volume totaled 623,300 cars, giving it a 10.2 percent market share.

Among specialist makers, BMW is 19.8 percent ahead of last year for the five-month period, with sales of 176,700 and a 2.9 percent share of the European market. In May BMW's sales rose 7.4 percent across Europe to 34,600.

But arch-rival Mercedes-Benz — with an aging product lineup compared with BMW — continued to lose ground last month, as sales slipped 7.4 percent to 37,800 units. For the January-May period, Mercedes was down 4.8 percent to 194,900 units. Market share has shrunk to 3.2 percent, compared with 3.6 percent in the first five months of 1988.

May's combined Japanese sales rose 2.7 percent to 136,000 units. Japanese makes are up 3 percent for the five-month period to 647,100 units, giving the group a 10.6 percent share.

Nissan is tops, up 10.1 percent over last year with 176,500 units, giving it a 2.9 percent share of the market. Toyota is next with 148,700 units for the first five months, a 1.5 percent decline from 1988. It holds a 2.4 percent share.

Among national markets, West Germany — Europe's largest — fell 5.1 percent in May to 253,600 units. The drop is in line with expectations of a decline in Germany's sales this year. Sales for the January-May period, however, remain 3.9 percent ahead of the year-earlier period, totaling 1,255,400 units.

Second-place Italy rose 7.5 percent in May to 223,500 units. Italy's sales for the five-month period ran 12.1 percent ahead of 1988's record pace, as volume climbed to 1,159,200 units.

The United Kingdom was up 7.5 percent in May, as unit sales reached 199,300 for the month. Total sales through May were 9.1 percent ahead of the year-earlier period, giving it a five-month total of 1,021,700.

France's sales last month dropped 7.3 percent to 170,000 units.

Spain's growth rate continues to slow: Sales were up 2.8 percent in May, to 100,400 units. The year-to-date total of 487,900 units remains 10.5 percent ahead of the year-earlier pace when Spain's sales topped 1 million units for the first time.

Autolatina co-op: Ford uses VW engine

By Rik Turner
STAFF CORRESPONDENT

SAO PAULO, Brazil — The first hybrid car from Autolatina partners Ford Motor Co. and Volkswagen AG was introduced June 14 when Ford unveiled an Escort powered by a 1.8-liter VW engine.

Autolatina, which sells cars in both Brazil and Argentina, was formed in 1987.

Autolatina hopes to revive Escort sales, which have lagged as the result of a reputation of being high-priced and underpowered with Ford's 1.6-liter powerplant.

It also marks the first step in joint development of Ford and VW products.

The next steps, according to Jair Bernadino, president of Assobrav, Brazil's VW dealer association, will be taken at the end of this year and the beginning of 1990, when first a Ford then a VW version of Europe's Ford Orion hit the market. Both will use VW engines.

Bernadino said the Ford Verona will be marketed as a standard car, while the VW Apollo will be an upscale model.

Bernadino said, Assobrav and Abradif, the Ford dealer association, last month signed agreements with their companies.

The agreements were preceded by highly sensitive negotiations, particularly in the case of VW, whose dealers felt they would lose in the deal, since VW already is the market leader and has a reputation for engineering quality.

Assobrav spent most of the last two years at loggerheads with Autolatina, going so far as to threaten legal action against the company for allowing Ford to get what Assobrav considered to be superior VW engines.

As a result of the agreements, the dealers apparently have buried the hatchet.

VW's 371,603 vehicle sales last year (domestic and export) represented 67.8 percent of Autolatina's total and Ford's 176,399 represented 32.2 percent. Under the agreement, Autolatina is committed to maintaining that proportion for VW this year.

Brazil sales continue to rise

SAO PAULO, Brazil — Domestic sales by Brazil's auto industry rose in May, according to the National Association of Automotive Vehicle Manufacturers.

Sales totaled 51,339 units in May, up from April's 46,203. Sales for the first five months of 1989 were up 1.47 percent, to 278,625 units.

Exports dipped to 94,914 in the first five months of the year compared to 142,219 a year earlier.

Export earnings through May dipped to $1.2 billion, down from $1.3 billion in 1988.

In addition to the continuing problem of an overvalued cruzado squeezing margins on exports, the industry is facing the end of the government's Befiex fiscal incentives program for manufacturers that sell abroad.

In place since the early 1970s, the program is one of the main reasons Brazil last year chalked up a record $3.2 billion in auto exports. There are no plans to replace the incentives when they expire later this year.

Auto output is 138,869, year's low

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

Entering the summer model changeover season, last week's targeted U.S. auto output was the lowest of any week this year, aside from holiday weeks.

Automakers scheduled 138,869 cars last week, 2.59 percent below the prior week's 142,566.

The total also was 13.20 percent below the 159,987 assembled in the corresponding week last year.

So far this year, 3,707,793 cars have been produced, 1.99 percent more than the 3,635,402 completed last year at this point.

Companies split last week's scheduled production as follows: General Motors, 44.20 percent; Ford Motor Co., 27.46 percent; Chrysler Motors, 11.16 percent; Honda of America Manufacturing, 5.58 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.15 percent; New United Motor Manufacturing Inc., 2.88 percent; Toyota Motor Manufacturing (U.S.A.) Corp., 2.43 percent; Nissan Motor Manufacturing Corp. U.S.A., 2.02 percent; and Diamond-Star Motors, 1.12 percent.

Model changeover downtime has yet to affect truck output as the makers scheduled 83,239 units last week, 7.25 percent below the previous week's 89,745 but 0.54 percent above the year-ago week's 82,788.

Year-to-date, 2,218,014 trucks have been built, 5.25 percent more than the 2,107,319 assembled last year at this time.

Ford closed its Wayne, Mich., and Edison, N.J., plants today for one week due to high inventories of Escorts.

The Eldorado, Seville, Riviera and Toronado lines at GM's Detroit-Hamtramck plant remain down for model changeover until Aug. 14.

The Allante line at Detroit-Hamtramck resumed production today after a one-week shutdown due to high inventories.

As reported earlier, Chrysler's Warren, Mich., truck plant and its St. Louis (No. 1) car plant are idle for model changeover.

The Warren facility is expected to resume operations July 10, and St. Louis is scheduled to reopen July 17.

Ford slated overtime last Saturday at its Wayne, Mich., truck plant.

Canadian cars climb for week

Canadian auto production was scheduled at 24,160 last week, 2.98 percent more than the previous week's 23,461 but 0.17 percent below the year-ago week's 24,200.

So far this year, 504,587 cars have been built, down 15.16 percent from the 594,744 completed last year at this point.

Truckmakers targeted 21,137 units last week, nine more than the prior week's 21,128 and 5.28 percent above the year-ago week's 20,077.

Year-to-date, 500,681 trucks have been assembled, 4.45 percent more than the 479,352 built last year at this time.

Hyundai allows duals as sales dip

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

Hyundai expects to sell 40,000 Sonatas, half its prediction at the car's debut.

LOS ANGELES — Hyundai Motor America is allowing dealers hard hit by a 31.3 percent sales drop to add a second franchise to exclusive operations.

The move is a departure for formerly high-flying Hyundai, which four years ago sifted through thousands of dealer applications and required stand-alone facilities costing millions of dollars.

About 20 Hyundai dealers have formally petitioned for permission to dual and at least five duals are operational, said Max Jamiesson, executive vice president.

"Our policy is still to require stand-alone facilities," Jamiesson said. "It's a good policy, but where specific dealers have to do something to maintain the dealership, we sit down with them and work out a temporary agreement. We know it's in our best interest to help keep our dealers profitable until the amount of new product over the next 14 months arrives."

Hyundai is trying to prevent dealers from selling off or converting large, multi-million-dollar facilities to other makes.

It hasn't always worked. Hyundai of Cerritos, a showcase facility in a major Orange County auto mall, was sold by principal Donna Reeves to Lewis M. Webb, who is converting it into a Lexus franchise next to his Toyota of Cerritos store. Reeves is retaining her Honda franchise in the same mall.

Still, Hyundai's overall dealer count is rising as new franchises are added. It has 299 dealers in 48 states (Alaska and Wyoming excluded), up from 289 at the end of 1988, and expects to have about 325 by year end, Jamiesson said.

But the company expects hard months ahead for dealers hit by falling sales and shrinking margins. Sales for the first six months of 1988 are expected to be about 100,000 units, down from last year's total of 148,493. A slight pickup in sales is expected as a restyled Excel and a V-6 for the Sonata are introduced for the 1990 model year, Jamiesson said.

He said the company is looking to become broader based with a 2+2 coupe derived from the new Excel coming next January and a Toyota Corolla-sized car in 1991.

But projected total sales have been scaled back to 220,000 units

see HYUNDAI, page 44

Big 3 quality up, but trails Japan

Despite putting four domestic models in the top 10 on J.D. Power and Associates' Initial Quality Survey, the Big 3 continue to trail Japanese makers.

And European makers, still a distant third, are making gains.

According to a copy of the study obtained by Automotive News, overall initial quality of new cars, as defined by the number of problems per 100 cars reported by 24,000 car buyers in their first 90 days of ownership, improved from 174 to 153 over last year.

But both Japanese and European makers made bigger gains than the U.S. makers in lowering the number of problems per 100 vehicles. The Japanese, at an average of 119 problems per 100 cars, had 21 fewer than last year. The Europeans, at 204 problems per 100, reported 54 fewer. The domestic industry, averaging 163 problems per 100, improved only by 14 and dropped from 23 percent behind the Japanese to 37 percent.

"While the quality performance this year versus last does support a closing of the European to domestic product quality gap, due to the fact that the Europeans improved at a faster pace than the domestics, a longer term trend shows that the Europeans are still far behind the domestics and indeed show a more significant gap than was true in 1987," the study reported.

The main areas of improvement were electrical and accessories, exterior paint and moldings, squeaks and rattles, and engine.

Although two domestic nameplates, Buick and Mercury, cracked the top 10, two others, Chevrolet and Eagle/Renault, were among the 10 worst. The top was dominated by Japanese makes, with the exception of Mercedes-Benz and Porsche, which ranked 1-2.

The bottom 10 were dominated by European imports, with Yugo at the bottom.

In announcing its results last month, J.D. Power, the Agoura Hills, Calif., market research firm, released only the top 10 nameplates and models.

The number of faults affecting a new car has a large influence on the likelihood of the buyer's repurchasing that model. In its 1989 Light Truck Consumer Satisfaction Index survey, Power said that 93 percent of customers experiencing no faults will buy the same model again. Intent to repurchase slumps to 57 percent for those drivers who have suffered four or more faults.

GM incentive debate drags as cars sit

By Michelle Krebs and Laura Clark
AUTOMOTIVE NEWS STAFF REPORTERS

DETROIT — General Motors is still debating what incentives to use to clean up its swollen 1989 inventory, though most of its current incentives expire next week and the model year ends in three months.

Proposals under discussion include fatter retail incentives and dealer incentives, according to dealer sources involved in discussions with the automaker. Model-year-end ordering ended in June, so any decision on dealer incentives for leftover vehicles will have come too late to encourage increased orders.

The sources said GM will continue low-interest rate programs and cash rebates. They expect those deals to be sweetened significantly and they expect incentives to dealers to be thrown into the package.

Among the proposals is applying an extremely low-interest rate — possibly as low as 2.9 percent — to 48- and 60-month loans. Dealers have argued that limiting 2.9 percent rates to shorter term loans has not been popular with consumers.

Another proposal is linking low-rate loans with cash rebates. In the past buyers had to choose between a loan or a rebate.

Regional incentives also are being considered. Richer incentives would be offered in an area where a model is selling slowly.

In addition to customer incentives, GM is expected to offer some kind of dealer incentive in lieu of a carryover allowance.

Ad spending surge hits TV first

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

> "My experience in this business tells me there is a time to be aggressive or risk getting shut out."
>
> — GUARASCIO

Automakers are bracing for an all-out advertising spending war in the 1990 model year to battle an expected softer U.S. new car and truck market.

The first shots have already been fired in the media industry, where larger automotive advertisers are flexing their buying leverage power over smaller marketers.

Advertising experts predict that automakers and dealer groups could increase spending by as much as 15 or 20 percent for the 1990 model year. That would bring spending to nearly $4 billion, up from the 1989 model year's already high $3.2 billion.

The television networks began negotiating upfront prime-time television buys exclusively with the automakers several weeks ago. The upfront market — the prime-time TV market covering the 12-month period beginning in late-September — has already rung up $700 million in committed automotive money compared to $400 million during the same period a year ago.

The automotive spending surge is fueled by General Motors, Toyota Motor Sales U.S.A. and Nissan Motor Corp. in U.S.A., each of which will introduce new car brands in the next 18 months: Saturn, Lexus and Infiniti.

GM, which spent $832.2 million in U.S. advertising in calendar 1988, is expected to spend $80 million to $100 million in advertising annually for Saturn, according to the trade paper Advertising Age.

Saturn's corporate and product positioning ads will debut during the 1990 model year before the car's official introduction in the

DRI sees start of two-year dip in world car sales

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — A European research group predicts this year's drop in world new-car demand — traced to the shrinking U.S. market — will worsen in 1990 as sales decline in Europe and Japan for the first time since 1984.

Moreover, the U.S. market will fall further next year, according to DRI-Europe's latest World Automotive Forecast Report.

The decline in world sales in 1989 has been blunted by stronger-than-expected demand in Europe and Japan. The London-based research group projects world registrations at 34.21 million units in 1989. That is down about 200,000 units from 1988 but is more than a million units above DRI's forecast late last year.

For 1990, the research group sees world sales falling less than 1 percent to 33.88 million cars. A relatively sharp increase of 3.1 percent to 34.93 million units is projected for 1991, followed by successive increases until world volume reaches 36.87 million units in 1994. That would be 7 percent higher than the record 34.43 million in 1988.

The U.S. market is seen slipping from last year's 10.58 million sales to 9.91 million in 1989.

DRI predicted that U.S. demand will "remain weak through the rest of the year as the economy slows and consumers reconsider their spending plans." It said U.S. sales will drop 1 percent in 1990 to 9.77 million units and then recover to 10.05 million in 1991.

DRI expects Western European demand for 1989 to edge past last year's record 12.90 million to 12.91 million, while Japan climbs from 3.72 million in 1988 to 3.91 million. Earlier forecasts had both markets falling back this year.

Western European sales are running ahead of last year through the first few months of 1989, though DRI expects a second-half decline.

Next year, Europe will drop 2.5 percent to 12.59 million, DRI said. And after two strong years, Japan will fall 3.7 percent to 3.76 million, offsetting expected gains in Asia-Pacific and Latin American countries. Europe and Japan are expected to rise to 12.83 million and 3.86 million units in 1991.

The predicted 5.1 percent growth in the Japanese market to 3.91 million units this year is attributed largely to a tax-reform package that took effect April 1.

DRI has significantly upgraded its long-term forecast for the Japanese market based on the tax cuts and the general strength of consumer demand. Last year, it predicted a market of just under 3.5 million units in 1993, but now forecasts 3.9 million in 1993 and more than 4 million in 1994.

DRI expects sales to continue rising in most Asia-Pacific markets. In South Korea, sales are projected to jump 23 percent to 392,000 this year and increase another 11 percent to 436,000 next year. DRI said sales in Taiwan will rise from 292,000 in 1988 to 362,000 this year and 382,000 in 1990.

INTERNATIONAL AUTO PRODUCTION
Production in select countries, in millions of units.

	Japan	U.S.	West Europe	South Korea
1988	8.20	7.12	13.03	.866
1989	7.94	7.46	13.07	1.11
1990	7.64	7.61	12.81	1.29
1994	7.84	8.32	13.73	1.78

The research group also expects renewed growth next year in Brazil, where sales are projected to fall 4.7 percent to 530,000 in 1989. Brazil's 1990 sales are pegged at 567,000.

DRI expects world auto production to rise 2 percent to 35.09 million units in 1989 and dip marginally to 35.04 million next year.

This year's biggest production cut — 3 percent -- will take place in Japan. Next year's Japanese production is expected to be the lowest since 1984. Although Japan is expected to regain momentum in 1991, DRI does not expect car output to return to 8 million within the next five years.

Although Japan currently outbuilds the United States, DRI expects that to change by 1993 because of Japanese transplants in the United States and Europe.

DRI said production at Japanese transplant facilities in North America will rise from 866,000 units in 1988 to 1.7 million by 1990 and to 2.1 million by 1994 — 22 percent of projected North American car output.

In Europe, a 7.2 percent increase in production is expected between 1990 and 1994 as transplant activity picks up. South Korea, meanwhile, is expected to more than double last year's output by 1994.

Yugo looks overseas to trim stocks

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

UPPER SADDLE RIVER, N.J. — Yugo America is negotiating with foreign firms that could buy a major portion of Yugo's unsold inventory.

"I've received hundreds of calls, from China, Hong Kong, Australia — you name it," said John A. Spiech, Yugo America president and chief executive officer.

Spiech

Spiech said that prospects are strongest in South America and in Africa, and if all the prospective deals could be put together, foreign wholesalers could buy 3,500 to 3,600 cars.

When Yugo America declared Chapter 11 bankruptcy Jan. 30, Yugo officials said the company

Want to talk to VWoA's Hans-Jorg Hungerland? Just pick up the phone in an Audi V8 Quattro. Naturally, the phone is standard equipment. So is everything else except pearl white metallic paint.

Audi turns to V8 Quattro to increase luxury share

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

KOHLER, Wis. — Audi of America is taking extraordinary steps to polish its image.

For example: It is late at night. You're driving an Audi V8 Quattro in the rain. You fall victim to unintended deceleration after you suffer two flat tires.

Lift the standard-equipment cellular phone and punch two preprogrammed numbers. Within minutes, a tow truck is dispatched to your aid.

Wait, there's more.

You're delighted with this luxury sedan and you want it to be known. Pick up the phone. Punch two more numbers. Have a talk with one of Audi's executives.

Hans-Jorg Hungerland, president and chief executive officer of Volkswagen of America, might well be on the other end of the line.

Hungerland would prefer that a new Audi V8 Quattro buyer calls to praise its quality or applaud the service offered. But if an Audi V8 Quattro "Executive Express" owner rings with a complaint, Hungerland still listens. He said he understands that only time and effort will turn around perceptions about the worth of Audi and VW products. A change of mind could mean increased sales.

"If the Volkswagen Group is to be all that it can be, we must rebuild the position of Volkswagen in the U.S. and restore the reputation and sales of Audi in this market," said Hungerland. "We are determined to do both.

"We are not kidding ourselves. This is no small task," he said.

That might be one of the automotive industry's great understatements. In 1988, Audi sales totaled 22,943, down 18,379 cars from the previous year's 41,322.

Audi's all-time high was 74,061 sales in 1985.

This year's sales are down from 1988's. For the first five months of 1989, Audi sold 7,413 cars compared to 9,311 a year earlier. At the current sales rate, Audi will finish the 1989 calendar year with just 17,787 sales.

Still, Audi officials remain determined.

"If you give buyers what they

Audi shows its $47,450 image builder, the V8 Quattro

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

KOHLER, Wis. — Audi of America's 1990 V8 Quattro is the latest salvo in its U.S. product launch, and company officials hope its potent powerplant and standard amenities will restore luster to the image of Audi and its products.

Priced at $47,450 — highest sticker ever for an Audi — the V8 Quattro is the flagship in a fleet that includes the recently introduced Audi Coupe Quattro and the 80/90 and 100/200 series sedans.

While the V8 Quattro resembles its 100/200 siblings, it shares only the roof and front-door panels with those cars.

The all-aluminum alloy, four-cam V-8 engine is fitted with a 32-valve head. It generates 240 horsepower and 245 pounds-feet of torque.

Audi engineers have geared the V8 Quattro so its power is delivered quickly and smoothly through the power band. It accelerates from 0 to 60 mph in 8.7 seconds and claims to have a top speed of 142 mph.

The car has an EPA rating of 14 mpg city/18 mpg highway and is subject to a $1,050 gas-guzzler tax.

Audi has fitted U.S.-specification 100/200 Quattro sedans with manual gearboxes. While European drivers prefer manual transmissions, on these shores the automatic transmission is the overwhelming choice of buyers of luxury cars.

With the V8 Quattro, Audi introduces a four-speed automatic transmission with lock-up torque converter. That is be good news for V8 Quattro buyers.

The bad news is the transmission will not fit in the current 100/200 sedans. Audi officials admit they are hustling to get an automatic gearbox for 100/200 Quattros; it will likely be available for 1991 models.

Standard on the V8 sedan is Audi's latest-generation all-wheel-drive Quattro system. This Quattro system differs from others in the Audi lineup in that it couples the 32-valve V-8 engine to an automatic transmission; Audi's other Quattro systems are used only with manual gearboxes.

The V8 Quattro system also alleviates any need to lock the Quattro drivetrain manually.

Audi V8 Quattro has a 240-hp, 32-valve engine.

Two automatic differential locks are part of the setup.

Another highlight of the V8's Quattro drive is a torque-sensing Torsen differential mounted between the rear wheels. It automatically distributes torque to the wheel with the best grip for traction on a slippery surface.

Also standard is an anti-lock brake system coupled to four-wheel discs.

Audi engineers have added a new twist to the front discs. Calipers ordinarily clamp around the outer edges of brake discs in other cars; on

Chevy Astro trails poor '88 mark in 35-mph crash

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Chevrolet's Astro van fared poorly in the government's latest round of crashes at 35 mph, posting higher head injury numbers than a similar model crashed last year.

Two sport-utility vehicles posted high head injury numbers for their front-seat passengers.

In NHTSA's New Car Assessment Program, selected vehicles with dummies in the front seats are crashed into a fixed barrier at a speed 5 mph higher than the 30 mph used to meet minimum federal safety standards. A 35-mph crash generates one-third more force than a 30-mph crash.

To meet the 30-mph standard, a vehicle must score 1000 or less on the head injury criterion and 60 G's or less on the chest deceleration scale. Scores higher than those are considered fatal for occupants.

The 1989 Astro did worse than the 1988 model. It was re-crashed this year because of last year's poor performance. The compact Chevrolet van registered a head injury level of 1849 for the driver and 1838 for the passenger, while last year, it recorded 1603 for the driver and 1424 for the passenger. The 1989 Astro also recorded chest deceleration scores of 64 G's for both driver and passenger.

NHTSA concluded that front-seat occupants of a Chevrolet Astro run more than an 80 percent risk of sustaining a "life-threatening brain injury" in a 35-mph frontal impact.

By comparison, Mitsubishi's van, the only other van included in this round of 1989 models, had head injury ratings of 805 for the driver and 713 for the passenger.

The Jeep Cherokee had a passenger head injury level of 1796 compared to a driver score of 968, and the Chevrolet S-10 Blazer had a passenger head injury level of 2482 vs. a driver score of 834.

While both posted head injury levels of less than a 1000 for the driver, chest deceleration for the driver was 69 G's for the Jeep and 62 G's for the Chevrolet. The only other sport-utility vehicle crashed, the Ford Bronco II, had a head injury rating of 994 for the driver and 950 for the passenger.

Of the five large and mid-sized cars crashed, the Chevrolet Caprice posted the highest head injury numbers, recording 1328 for the driver and 1365 for the passenger. The Caprice was the only other vehicle in this round that scored higher than 60 G's for chest deceleration, recording 64 G's for the driver.

The mid-sized Plymouth Acclaim had the lowest head injury numbers with 660 for the driver.

Chevy Astro taxi has hinged doors on both sides; sliding door is gone.

Chevy considers taxi package for Astro

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

Chevrolet may offer a four-door Astro taxicab as a factory-installed package.

New Era Transportation of Akron, Ohio, has developed the cab. The company makes medical transportation vans and driving adaptations for the handicapped.

Taxi companies are hard pressed to find successors to large vehicles such as the Dodge Diplomat and Plymouth Grand Fury, which went out of production last December.

In the cab configuration, the Astro's sliding right-side door is replaced by a large, hinged door. A similar hinged door is installed opposite it on the left side to eliminate passenger exposure to traffic while entering or leaving the vehicle.

If Chevrolet were to offer an Astro taxi package it would include an automatic transmission, heavy-duty front springs, wiring for additional lighting, taxi company paint and a 34-gallon fuel tank replacing thc usual 17-gallon tank, said William F. Davis, founder of New Era Transportation.

Chevrolet executives called the vehicle a concept car and said the offering of a factory package is under consideration.

New Era Transportation already is distributing sales literature describing the Astro cab. The literature also discusses cabs made from the Ford Aerostar and Chrysler Motors' front-drive Dodge Caravan and Plymouth Voyager minivans.

High VW post puts Goeudevert on road to top

Goeudevert

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

COLOGNE, West Germany — Daniel Goeudevert, who surprised the European industry by resigning as head of Ford of Germany last spring, has turned heads once again with a pending move to Volkswagen AG that places him squarely in the race to succeed VW Chairman Carl Hahn.

The outspoken, 46-year-old Frenchman had run Ford's large West German operation for eight years. But he said in an interview with Automotive News that he reached a career impasse with the American company.

A fervent admirer of Ford Chairman Donald E. Petersen, Goeudevert said he left on the best of terms. But he admitted to some frustration at being unable to move to Ford's North American operations.

On the other hand, Goeudevert said he had no interest in going to Ford of Europe headquarters in the United Kingdom, which he described as "somewhere nowhere."

Once a literature professor at the Sorbonne in Paris, Goeudevert left Ford May 1 with the intention of completing a book on the auto industry and founding a management school in Germany.

But after Autolatina executive Gerd von Briel, the designated successor to retiring VW Vice Chairman Horst Muenzner, was killed in a helicopter crash in Brazil last March, Goeudevert was approached about the VW job. Autolatina is a joint venture between Ford and VW in South America.

He is expected to inherit Muenzner's management board position -- in charge of purchasing and logistics — pending approval at the July 12 supervisory board meeting.

Hahn, 62, is due to retire in the early 1990s, and Goeudevert and Audi AG Chairman Ferdinand Piech are being looked at as leading candidates to replace him.

"If the board approves, I will be happy to join," said Goeudevert. "I will be able to implement a lot of the things I have discussed, and it fits with my plan to be active with my school."

He said he would not join VW until the end of the year

Goeudevert, who ran marketing operations at Citroen and Renault before joining Ford, called the proposed VW purchasing and logistics job "a fascinating position, at the center of engineering, manufacturing and finance."

He declined to comment on his prospects for succeeding Hahn.

The rapid return to the auto business surprised even Goeudevert, though he said he received four solid offers from European carmakers.

"I was hoping to have one to two

RAY OF HOPE: *High court says due process may limit punitive damages*

By Helen Kahn
SENIOR CORRESPONDENT

WASHINGTON — The Supreme Court ruled last week that businesses cannot expect the Constitution's "excessive fines" provision to protect them from heavy punitive damage awards in civil lawsuits.

But the court left the door open for a similar case if the same question were raised under the Constitution's due process clause.

The case was watched closely by the auto industry because of its product-liability award implications. It involved a Vermont subsidiary of Browning-Ferris Industries of Houston, which was assessed a $51,000 judgment and $6 million in punitive damages for attempting to put a rival waste disposal firm, Kelco, out of business.

Browning-Ferris asked the court to review the punitive damages. The company called them excessive since they were 117 times the compensatory damages.

The Motor Vehicle Manufacturers Association, along with the National Association of Manufacturers, the U.S. Chamber of Commerce and others, filed briefs on behalf of Browning-Ferris. Consumer and trial-lawyer groups filed on behalf of Kelco.

The Supreme Court's 7-2 decision turned on whether the Eighth Amendment, which is normally applied to criminal cases, could ever apply to private litigation. The amendment prohibits excessive fines or cruel and unusual punishments. The court majority decided the intent of the amendment was to protect individuals against excesses of government but not to protect private party litigants.

But the majority, while refusing to address the due process clause of the Fourteenth Amendment because it was not properly before the court, admitted that some of its earlier decisions suggest that due process "places outer limits on the size of a civil damages award made pursuant to a statutory scheme."

Justices William Brennan and Thurgood Marshall filed a concurrence "on the understanding that it leaves the door open for a holding that the due process clause constrains the imposition of punitive damages in civil cases brought by private parties."

William Crabtree, general counsel and vice president of MVMA's law division, said the group was "disappointed at the court's decision."

"The large number of briefs filed in the case by the business community indicates the importance of the issue of uncontrolled punitive damages, Crabtree said. "MVMA joined with seven other trade groups in a brief; several more were filed, all urging the court to act to limit punitive damages.

"The court will certainly consider it again, when it can be reviewed as a due process of law question," he said.

"In the meantime, we expect that state legislation to limit punitive damages awards will get fresh attention and will accelerate."

New effort made to limit product liabiity

WASHINGTON — A product-liability reform bill introduced in the House of Representatives could dramatically reduce the number of lawsuits filed against auto manufacturers.

The bill, introduced by Rep. Thomas Luken, D-Ohio, is similar to legislation that died in a House committee last year.

Luken's bill would limit an automaker's liability if the claimant misused or altered the product or was drunk or on drugs; if the manufacturer did not or could not know about a defect; or if there was no technically feasible way to design a safer product.

It has the support of the Product Liability Coordinating Committee, a consortium of companies that have pushed for liablity reform. Members include American Honda Motor Co. and Toyota Motor Sales U.S.A..

The bill "promises new fairness, consistency and speed in resolving liability issues that have crippled American producers and cost consumers dearly," said St. Clair J. Tweedie, chairman of the group.

Consumer groups oppose the legislation. "We're hoping that it isn't going to go anywhere," said Christin Rand, an attorney for the Consumers Union of the U.S.

Makers pay $2 million for Washington lemons

By Helen Kahn
SENIOR CORRESPONDENT

Attorney General Ken Eikenberry said awards to consumers resulted in buybacks or replacement of vehicles worth more than $2 million in the first year of Washington state's tough new lemon law.

He said the law has made manufacturers "much more responsive to consumers in their warranty concerns," and he said the makers have been settling disputes before they come under the lemon law.

For each of the Big 3, the share of lemon law complaints was higher than its market share. Three Japanese firms, each with more than 5 percent of the market, had a lower share of claims than their market shares.

Ford Motor Co. fared worst, logging 29 percent of the state's lemon law claims compared to its market share of less than 19 percent. General Motors also accounted for 29 percent of the claims, compared to its market share of almost 26 percent. Chrysler Motors recorded 18 percent of the claims vs. a market share of 13 percent.

In contrast, American Honda had fewer than 2 percent of the lemon claims, compared to a market share of 8 percent. Nissan Motor Corp. and Toyota Motor Sales both had about 2 percent of lemon law cases, while their market shares were 6 percent and almost 11 percent, respectively.

For small-volume sellers — those with less than 5 percent of the market — Mazda Motors of America performed best. Mazda accounted for slightly more than 2 percent of the complaints against a market share of almost 5 percent. Peugeot Motors of America and Yugo America had the poorest records among the small-volume marketers.

Washington's law includes a state-run arbitration program. It covers new vehicles sold at retail or leased for two years or 24,000 miles and requires a dealer to tell the consumer of his/her rights.

Rather than notifying the manufacturer of a problem, consumers need only notify a dealer while the vehicle is under warranty for the repair obligation period to start.

A vehicle is presumed to be a lemon after two or more attempts to repair a safety defect or four or more attempts to fix another problem or if the vehicle is out of service for 30 days, 15 of which must be in the warranty period.

A manufacturer that delays carrying out a decision by the state arbitration board can be fined $1,000 a day. In some cases, the manufacturer must pay $25 a day in rental-car costs, and the manufacturer may be assessed treble damages in cases taken to court. Buybacks must include collateral charges — fees, taxes and other charges — and incidental costs.

Under Washington's law, buybacks that have a "serious safety defect" cannot be resold without a manufacturer-guaranteed correction. Lemons whose defects do not involve safety may be resold without repairs but their lemon status must be disclosed.

Car dealers' asset return off at 7.1%

McLEAN, Va. — Average return on assets for U.S. car dealers in the 1988 calendar year dropped to 7.1 percent, lowest since the recession of 1982, according to the National Automobile Dealers Association.

Import dealers showed the greatest decline in return on assets.

European-make dealerships saw a decline in average return on assets from 19 percent in 1986 to 6.2 percent in 1988. For Japanese makes, the return on assets fell from 16.1 percent to 7.4 percent.

Domestic dealers generally suffered less. They reported an average 7.3 percent return on assets in 1988, down from 9 percent in 1986.

Honda Division dealerships reported the highest return on assets among all makes with a 10.6 percent. Oldsmobile dealerships reported the lowest rate, with 3.7 percent.

Ford Division and Lincoln-Mercury dealers recorded the best return on assets among the domestic dealership, at 9.4 percent.

Other rates of return on assets were:

Chrysler-Plymouth and Dodge, 8.5 percent; Pontiac and Chevrolet; 6.4 percent; Cadillac, 4.6 percent; and Buick, 4.2 percent.

LEADING-EDGE "YOU WIN BIG" PROGRAM PRODUCES EXCEPTIONALLY HIGH DEALER VOLUME, GROSS, AND PROFITS

Clients Get "Unfair Share" of Market With "Non-Confrontational" Selling, Total Integration of Four Vital Areas of Marketing, Sales, Management, and Inventory.

The "You Win Big" sales and management program is increasing volume, gross, and profit for auto dealers all across the nation, producing levels in these areas much higher than the industry average.

"Our clients' gross profit levels are about 75% higher than the industry norm, and their closing ratio is one and one-half that of the national average," states Peter Bond, founder of the "You Win Big" program and president of Peter Bond's Automotive Resource Group, Inc., one of the largest automotive consulting firms in the United States.

> "Hundreds of thousands of dollars, the best research, and five years of showroom experience have gone into 'YOU WIN BIG.' It will revolutionize the way vehicles are marketed in the 90's."
>
> Peter Bond

Peter Bond, President of
Peter Bond's Automotive Resource Group

"'You Win Big' is a non-confrontational marketing, sales, management, and inventory program which has successfully integrated the four vital elements of a successful sales operation into a powerful total sales instrument," Bond says. "This plan has been installed in more dealerships across the nation than those of all other companies combined."

The firm's fee system involves no financial risk for the dealer, because Peter Bond's Automotive Resource Group receives only a portion of the increased gross profit produced while "You Win Big" is operating in the dealership.

The unique program will be especially effective for its clients in the competitive years to come, according to Bond. "After five years of research, development, and implementation over a major portion of the country in all types of markets representing all makes and models of automobiles, in small dealerships and some of the nation's largest, we feel we have produced the leading-edge program that will revolutionize the way vehicles are marketed and sold in the years ahead."

"We have spent hundreds of thousands of dollars in research, and retained and employed psychologists and educators from leading universities, as well as the most skilled sales and marketing professionals in the nation, to successfully integrate the four areas that enhance a dealership's sales efforts," Bond states.

Using this totally integrated program, marketing floods dealership showrooms with impulse buyers rather than shoppers. Inventory strategically selects the oldest units to be sold, while providing major increases in volume. The sales force motivates the prospect to buy with effective non-confrontational procedures, while management keeps everyone on track to follow the proven, successful steps of the program, using checks and balances built into the system.

"Our plan has led our dealer base to unparalleled volume records and has sharply enhanced gross profits per vehicle retailed," Bond states. "Our volume and gross profit levels are much higher than the automotive industry average."

"We like to say that our clients get their 'unfair share' of the market," Bond continues. "ARG represents only one dealer selling his brand of vehicles in each market. Often we've been able to feed off our dealer's competition to enhance his market penetration."

Very different from widely-used conventional sales methods, the non-confrontational sales procedure applies no pressure to the prospect at any time. This method is especially effective in making the whole buying process a pleasant experience for the customer, greatly increasing CSI. The salesperson learns the process through expert training which is maintained through close supervision.

> "Our clients' gross profit levels are 75% higher than the industry norm."

To increase the program's effectiveness, ARG is computerizing the dealer's reporting methods and capabilities. Data from all dealer sales and managmement personnel is entered into a computer and evaluated daily at ARG headquarters. "Statistics on each person's efforts and results are reported to us daily, so we can react to any problem immediately," Bond says. "There is no better reporting system in the industry."

Both dealers and manufacturers have expressed a great deal of interest in "You Win Big," with all agreeing that it is truly the program to increase volume, gross, and profit in the competitive 90's.

U.S.-Japan glass firm serves Saturn

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

D&A Technology, a new U.S.-Japanese venture, plans to break ground this month for a Tennessee plant to supply windows and possibly other glass products to General Motors' Saturn plant in Spring Hill, Tenn.

The $5.3 million facility represents a partnership between Donnelly Corp. of Holland, Mich., and Asahi Glass of Japan.

Asahi, one of Japan's largest producers of automotive glass products, is the supplier of record to Saturn. Paul Kalkman, Donnelly senior vice president, said the joint venture was formed because the Japanese company is restricted from manufacturing directly in the United States.

Asahi has a licensing agreement to produce Donnelly products in Japan that stipulates the company cannot manufacture in this market. The joint venture will produce the products, and a wholly owned Asahi subsidiary, AP Tenntech Corp. will service the contract.

The venture is the first U.S. investment for Asahi, a conglomerate with holdings in mining and chemicals, and the first U.S. venture outside Michigan for Donnelly.

Kalkman said the companies cannot say specifically what glass products D&A will supply to Saturn, but he indicated they will include modular door windows. Modular windows are the largest market for Donnelly, which had 1988 revenue of $157 million.

Kalkman said the partners will break ground for the 51,200-square-foot plant early this month, with production scheduled to begin in early 1990. The plant initially will employ 80, and employment is scheduled to increase to about 160 within four years.

The plant will be in Mount Pleasant, about 30 miles south of Saturn's Spring Hill facility.

A Saturn spokeswoman confirmed that the company has been designated as a "supplier partner," Saturn's term for a supplier, but declined to comment further.

Saturn has maintained a high degree of secrecy about its suppliers. The spokeswoman said the policy was adopted to shield the suppliers from unwanted publicity, prevent competitors from learning what components the new car will use and prevent other customers from swamping the suppliers and tying up their production capacity.

Earlier this year, Milwaukee-based Johnson Controls announced that it would build a 133,000-square-foot manufacturing complex in Lewisburg, Tenn., to produce car seats for Saturn.

Saturn plans to manufacture 225,000 vehicles a year at the Tennessee plant, beginning with the 1991 model year.

Potamkin sells N.Y. cellular phone firm

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Megadealer Victor Potamkin has sold his Manhattan cellular phone operation to NYNEX Mobile Communications.

Potamkin Communications began selling, installing and servicing cellular phones at the inception of cellular phone service here five years ago.

Potamkin was an agent for NYNEX, which owns New York Telephone, the area's phone company. During the last two years, NYNEX has bought out all but one of its half-dozen independent sales and service facilities, said NYNEX Mobile Communications spokesman Jim Gerace.

NYNEX will take over the cellular phone operation at its site on 11th Avenue. It adjoins the West Side branch of the former Potamkin Cadillac Corp., which Potamkin sold to Roger Penske in 1987.

Whether Potamkin's three remaining dealerships in Manhattan will continue to sell cellular phones is "subject to negotiation," Gerace said.

Compiled by Automotive News from official statistics of the U.S. Commerce Department, as reported by the U.S. International Trade Commission. Because of rounding, figures may not add to the totals shown.

Auto trade deficit rises for 2nd month in a row

WASHINGTON — The U.S. automotive trade deficit by value in passenger cars and light trucks increased 18 percent in March. Export value fell 20 percent for the month, while import value increased 8.6 percent.

The auto trade deficit in February had increased 14.2 percent over the same period a year ago.

Despite the two-month increase in the deficit, on an annualized basis, the deficit is lower for April 1988 through March 1989, compared with the year-earlier period. The deficit totaled $44.55 billion for the 12-month period through March compared with $45.16 billion for the similar period a year earlier.

But for March alone, U.S. Commerce Department figures show a trade deficit for passenger cars and light trucks of $4.05 billion, compared with $3.43 billion a year earlier.

Total car and truck imports had a value of $4.95 billion during the month, up 8.6 percent over a year earlier. Car and truck exports were valued at $900.4 million.

Passenger-car exports totaled 57,404 units in March with an estimated value of $700.7 million. Light-truck exports for the month totaled 18,389 units with an estimated value of $199.7 million.

Passenger-car exports were down 46.9 percent to Japan and up 8.6 percent to nations labeled "others" by the U.S. Commerce Department.

On the import side in March, Japan registered a 22.8 percent increase in the number of cars shipped to the United States. The value of Japanese shipments increased 29.0 percent for the month. Both the value and quantity of Japanese truck imports declined.

Passenger-car imports from all countries reached 374,688 units for the month with a value of $4.16 billion. Light-truck imports totaled 86,663 units with a value of $787.7 million. The value of imported trucks surged 19.6 percent from one-year ago, while shipments declined 1.1 percent.

Truck-import value was up largely due to a 58.8 percent increase in the value of trucks shipped from Canada.

Japan's car shipments rose 22.8 percent to 178,420 units in March; truck shipments declined 20.4 percent to 50,086 units.

Hard top for ragtop
American Hardtops, Auburn Hills, Mich., has come up with a removable hardtop for 1987-1989 Ford Mustang convertibles. The 60-pound fiberglass top comes with a glass rear window and retails for $1,895.

German-produced TV series depicts auto's first 100 years

By John M. Clor
CRAIN NEWS SERVICE

Just in time for those lazy summer nights when cable television channel-hopping can bring sweat to the brow, along comes a 13-part visual history of the first 100 years of the automobile.

The German-produced series makes its U.S. television debut on The Discovery Channel at 9:30 p.m. EDT July 5.

The initial half-hour installment, "Self-Propelled Vehicles," takes the viewer through man's quest for mobility, from the invention of the wheel to the horseless carriage.

It does a thought-provoking job of tracing that progression, but it breaks down in spots. Splicing footage of early-1900s cars driving in country settings with modern heavy-traffic scenes — back and forth — is more of a distraction than a mood- or image-setter.

A re-creation of how early motorized vehicles were received by the public is hokey, with most of the actors better suited for "Monty Python" comedies.

The second episode, "It All Started with Karl Benz," chronicles the contributions of Benz and others and Henry Ford's idea of using an assembly line for mass production. It includes vintage factory film footage.

Episode three, "Motorization Takes Off," depicts how cars progressed from playthings for the rich to mobility for the masses, especially in the case of the Model T and the Volkswagen Beetle. It concludes with the mention of the rise of Japanese makers' technological leadership into the 1980s.

The fourth chapter is titled "The Power of the Engine." It describes basic concepts behind the internal combustion engine and its related components, with a good bit of animation tossed in for clarity. It follows development and refinement and adds some scenes from the early world of racing.

The historical aspect of the first four installments has a distinct European perspective and helps the viewer realize that the creation and evolution of the automobile is truly a multi-national phenomenon. The overall view may be enlightening to those Americans who still believe that the early automotive universe revolved solely around Detroit.

The series runs through early October.

INCENTIVES

FROM PAGE 1

Earlier this year, GM said it was eliminating the carryover allowance. Historically, GM paid dealers 5 percent of the retail price of the base car plus factory installed options on vehicles left in the dealer's inventory when the next model year starts.

The percentage has been scaled back in recent years because dealers had to contribute to massive model-year retail clean-up programs.

Without offering details, GM said the automaker would help dealers clean out 1989 inventory. Without a firm successor program, dealers who feared they would be stuck with a glut of old models next fall were discouraged from ordering at the end of the model year.

One plan under consideration is to offer the dealer the choice of a percentage of the invoice for each car sold or a specific dollar amount for every car sold. Another proposal would have GM set specific sales targets for each dealer based on the number of vehicles in a dealer's inventory. Dealers, for example, would be given a certain amount of cash if they meet up to 50 percent of the target and an even larger amount — probably double — if they achieve more than 50 percent of their target. GM would give dealers some of the money in advance to be used for marketing.

Discussions inside GM and in GM's advisory group of dealers and division sales managers have been heated regarding the next round of incentives, particularly due to GM's high inventories, according to dealer sources.

GM had nearly a million cars in inventory as of June 1, about 110,000 more than at the same point a year earlier.

Each plan proposed has been weighed for impact on individual divisions. Each division has its own set of problems and GM executives don't want to put an incentive program into effect that will work to the advantage of one division and the disadvantage of another, according to dealer sources.

For that reason, GM has considered offering different incentive programs for each division instead of one corporate program. Cadillac moved in that direction, announcing $1,000 rebates on DeVille, Fleetwood, Seville, Eldorado and Brougham from July 1 to Sept. 27. No dealer financial participation is required, and cars must be purchased from dealer stock.

Another delay in the decision on cleanup incentives has been Chevrolet. Chevrolet executives fear that if GM announces incentives first, Ford will outdo them and Chevrolet will be at a disadvantage, according to dealer sources. Chevrolet has been fighting a losing battle in recent years for sales supremacy over Ford.

Some dealer representatives and divisional executives lobbied to eliminate cash rebates to buyers to give the cash to dealers to use as they see fit for marketing in their local areas. Some executives within GM adamantly oppose that plan.

Dealer sources, however, say the cash-to-dealers idea has gained some support as the current incentives have failed to boost sales.

In other incentive news, Oldsmobile announced that it has increased the cash rebate on its 1989 Cutlass Ciera from $800 to $1,000. Dealer participation also increased on that model from $200 to $250. The new offer began June 24 and expires July 10.

BMW last week announced a $5,000 incentive to dealers on the 735 models if dealers place them into their demonstrator service for two months.

Ford shuts 2 Taurus plants as dealers shun buildout cars

.By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Ford Motor Co. will shut down for a week two assembly plants that build the popular Ford Taurus and Mercury Sable because of dealer hesitancy to order 1989 models during the buildout period.

Ford has not yet told dealers if it will help them sell the late-1989 models. The company has warned them not to count on the traditional 5 percent carryover allowance on cars in inventory at the end of a model year.

The closings will add one week of layoff to the end of a standard two-week summer vacation for some 4,450 hourly employees at Ford's Atlanta and Chicago plants. A two-week vacation began today at all Ford plants.

Ford will idle the Chicago and Atlanta plants the week of July 17, knocking out production of some 10,500 Taurus and Sable models.

Dealers have reduced orders for 1989 models as they have begun ordering the 1990s.

Ford also closed its Oakville, Ontario, plant last week to reduce inventories of its Ford Tempo and Mercury Topaz cars built there. At the beginning of June, Ford had an 89-day supply of Tempo and an 83-day supply of Topaz cars.

Dealers and the automakers have seen industrywide inventories of unsold cars increase, although demand for Taurus and Sable has kept supplies below the industry-standard "comfort" zone of a 60-day supply.

In previous years, the carryover allowance was 5 percent of the sticker price of vehicles left in inventory at the start of a new model year.

Early this year, General Motors told its dealers it would drop its 5 percent payment. Ford followed suit.

The Ford allowance will be doled to dealers only if GM reinstates its carryover allowance, a company spokesman said.

Only GM and Ford offer carryover allowances to their dealers.

Last month, the Ford Dealer Council sent a letter to the company warning that it could lose sales momentum and market share if Ford drops the allowance.

The letter said the dealer council views the allowance as compensation for ordering cars that are essentially a year old. If the payout is dropped, the letter warned, dealers will have little justification for stocking the late 1989 models.

Ford said it is watching GM's moves and will do what it must to remain competitive.

"We have told them (dealers) not to count on" the carryover allowance, a Ford spokesman said. "We will do what it takes to be competitive and to maintain a steady production flow in the 1990 model year. But we've told them, 'Don't count on it.' "

QUALITY

FROM PAGE 1

dential J.D. Power report shows the Buick LeSabre was among the top 10 performers in five main quality problem areas of the vehicle. The LeSabre joined the Mercedes 190 as the model with the second best quality consistency.

At the top of the improvement league, Eagle/Renault made gains of 48 percent compared with an industry average of 12 percent. Chrysler improved 23 percent.

The 1989 J.D. Power survey saw the German nameplates overtake the domestic industry due to a big effort by Volkswagen to reduce problems per 100 cars by 43, down to 174. The Germans, on average, had 153 problems compared to the domestic average of 163.

The impressive detail of the survey makes it possible to analyze which models scored best and worst by various problem areas.

The Yugo scored worst for engine, interior, transmission and steering and handling problems, while the Alfa Romeo Milano had the worst performance for electrical/accessories, squeaks and rattles and temperature control. The best models for engines and interiors were, respectively, the Acura Integra and Honda Prelude. There was a tie on transmissions: No complaints were registered against the Porsche 911, Buick Riviera and Plymouth Acclaim. Honda's Civic CRX and Accord tied for fewest problems with electrical/accessories, Mazda's 929 was best on squeaks and rattles, while Acura Legend, Buick Reatta and Toyota MR2 tied on temperature control.

Five cars — the Isuzu I-Mark, Golf GTI, Buick Electra, Subaru 3-door Coupe and Mercedes S-class — tied with no complaints on water leaks, while the Pontiac Firebird was worst in this category.

Plymouth Acclaim scored zero complaints on brakes, while Sterling was worst. Hyundai's new Sonata finished last in exterior paint and moldings, while Porsche 911 was best. Daihatsu's Charade had fewest body complaints, contrasted to the Oldsmobile Custom Cruiser, which had the most.

On steering and handling, Cadillac Allante, Dodge Spirit and Nissan 300ZX tied for fewest problems. Pontiac Sunbird was best on wind noise, while Mitsubishi Mirage was worst.

The 3 series is BMW's model with the fewest initial faults, 154, which compares poorly with the rival Mercedes 190, at 100. The 750il had 190 problems, the 535i had 193 and the 525i logged 223 problems per 100 cars.

Despite a high number of faults, Sterling (still selling 1988 cars) and Peugeot achieved big improvements. In contrast, Jaguar XJ-S with 291 problems per 100 cars hardly improved over the 12 month period.

The survey also revealed that despite assurances that U.S. transplant vehicles are the same quality as those built in Japan, Honda's U.S.-built Accords logged 11 more problems per 100 cars than those built in Japan.

NEW CAR INITIAL QUALITY NAMEPLATE RANKING 1989

Dealer ratings don't mimic cars' records

While Jaguar finished in the bottom 10 in J.D. Power and Associates' 1989 Initial Quality Survey, its dealers were second in their ability to fix customers' problems.

Conversely, companies with high scores for building the cars with the fewest defects, most notably American Honda and its upscale Acura Division, have dealers who have a much harder time fixing the problems that confront them.

And although Chrysler Motors dealers led the industry in their ability to fix problems, Buick and Mercury were the only ones able to fix nearly 60 percent of the initial problems while building cars with fewer faults than the industry average.

Power, a market research firm in Agoura Hills, Calif., concluded that cars with more problems are generally sold by dealers who do a better job of correcting them.

No Japanese nameplate beat the industry average for entirely fixing faults affecting new cars. In its 1988 study, Power ranked Asian dealers worst in the industry for fixing early faults and noted that fewer than half the initial problems are taken back to the dealer to be fixed.

"With fully half of all problems encountered by Asian car owners not being taken to a dealer (up 10 percentage points over 1988), it may be that the word has gotten out that dealers provide less than a 50/50 chance of repairing problems even if an owner does take them to a dealership," Power said.

Honda cars are ranked fourth for fewest problems the first 90 days of ownership, but its dealers fix entirely only 44 percent of faults brought in by customers, the third worst performance in the industry, according to the survey. Acura dealers achieve a complete cure for just 45 percent compared with an industry average of 53 percent, Power said.

Of the 12 types of problems analyzed in the study, dealers have their greatest success in fixing electrical/accessory problems, with 69 percent fixed completely. They are least able to fix wind noise, with a 37 percent success rate.

PROBLEM RESOLUTION AT THE DEALER NETWORK LEVEL

PRODUCTION

Auto output slides 10% to 127,175

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

Scheduled domestic auto output declined nearly 10 percent last week as Ford Motor Co. closed its Escort assembly plants in Wayne, Mich., and Edison, N.J., because of high inventories.

Automakers targeted production of 127,175 units, the lowest of any full work week this year. Last week's output was 9.86 percent below the prior week's 141,086 and 20.33 percent below the year-ago week's 159,618.

Last week's estimated production was split as follows: General Motors, 46.81 percent; Ford Motor Co., 23.18 percent; Chrysler Motors, 12.27 percent; Honda of America Manufacturing, 6.05 percent; New United Motor Manufacturing Inc., 3.15 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 2.73 percent; Toyota Motor Manufacturing U.S.A., 2.67 percent; Nissan Motor Manufacturing Co. U.S.A., 1.93 percent; and Diamond-Star Motors, 1.21 percent.

Truck production was scheduled at 80,578 units last week, 3.36 percent below the previous week's 83,379 but 3.79 percent more than the year-ago week's 77,637.

Ford shut all its car and truck plants today for vacation. The Chicago and Atlanta plants, which build Ford Taurus and Mercury Sable, will be closed until July 24; the others will reopen July 17.

Chrysler's Toledo, Ohio, (No. 2) plant closed last week for model changeover and will be down until July 24. The company's Warren, Mich., and St. Louis (No. 1) plants remain idle for model changeover.

Two transplant companies and one joint-venture operation are closed this week for vacation. Honda and Diamond-Star will return July 10; Nissan, July 17.

All car and truck plants will be closed tomorrow for the July 4 holiday.

High stocks cut Canadian build

Last week's scheduled Canadian car output dipped from the previous and year-ago weeks' builds as two plants were closed because of slow sales.

Automakers targeted assembly of 17,415 cars last week, 23.74 percent below the prior week's 22,836 and 19.87 percent below the year-ago week's 21,734.

Truck output slipped to 20,373 units last week, 4.98 percent below the previous week's 21,441 but 34.48 percent above the year-ago week's 15,149. The 1988 week included the Canada Day holiday.

Ford Motor Co. closed its Oakville, Ontario, plant last week because of high inventories of its Tempo and Topaz models. The plant will be idle until July 17 for vacation.

Chrysler Motors' Bramalea, Ontario, plant was down last week because of high inventories of its Premier models. The plant will remain closed for vacation and model changeover until July 31.

All plants are closed today in observance of Canada Day.

Japanese seek storage space as cars clog ports

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Excess inventory at the nation's leading ports has forced some Japanese importers to seek storage space inland before cars are shipped to dealers.

Port officials say the buildup may be due to a sales lag. But at least one Japanese automaker says its sales surged in June and the overflow is due to buildout in Japan before plants close in August.

"Nissan has been approaching companies owning land to make just-in-case plans," said an industry source. "They have asked companies in northern California and San Diego if they have land available to lease in the event of an emergency."

And a high-ranking official in the auction industry said the company has been approached by three Japanese car importers asking for storage space.

Meantime, a spokesman for Nissan Motor Corp. in U.S.A., based in Carson, Calif., said the automaker is trucking vehicles to a storage facility in Philadelphia, from its Smyrna, Tenn., plant due to slow sales of entry-level vehicles, Pathfinders and trucks until storage space can be built at the plant.

He also said there have been discussions with companies to lease storage sites if it becomes necessary.

A spokeswoman for Toyota Motor Sales U.S.A., Torrance, Calif., conceded the automaker has 6,000 vehicles parked in Fontana, Calif., but denied it was due to a dip in market. She characterized Toyota sales in June as record-breaking.

Combined domestic-built and import sales for Toyota were up overall in June but sales of its imported models dipped to 49,223 from 54,906 last year. Import sales for Nissan in June were 41,583, up from 35,324.

"Vehicles are being shipped to the United States faster than they are sold because of buildout in Japan," she said. "Plants traditionally close in August in Japan."

But Francois Elmaleh, general manager of the automotive division for the Port of Portland, said the number of vehicles at the port indicates a slowdown somewhere.

He estimated there are 20,800 vehicles at one terminal up from 12,000 normally and 6,000 Toyotas at another terminal that "appear to be in temporary storage."

According to Elmaleh, there are high numbers of vehicles on the ground at ports on both coasts.

Korean automaker Hyundai Motor America, of Garden Grove, Calif., is putting the most pressure on the port for space, with cars parked for upwards of 70 days.

"We have graveled an additional 30 acres for Hyundai to handle the overflows," said Elmaleh. He added that Toyota "is backed up."

Jim Mazorkis, general manager for Pasha Group at the Port of Richmond in California, said Acuras are moving slower than usual.

Vehicle "dwell time" in port for Acuras is three weeks up from one week, he said. That is, cars that are normally processed and

Turbochargers, highlighted at right on a Chrysler 2.2-liter engine, give extra zip to cars like the 1989 Shelby Shadow. Hot exhaust gases drive a turbine that forces air into the cylinders, but the heat that is dissipated in the metal turbo housing may be required by the catalytic converter farther down the exhaust system.

TURBO BARRIER: *Costly emissions changes threaten popular engine*

By Jack Keebler
AUTOMOTIVE NEWS STAFF REPORTER

Tougher tailpipe emission standards will require multimillion-dollar changes to catalytic converters, vehicle floorpans, exhaust manifolds and possibly emissions-system warranties.

Future emissions standards could also eliminate passenger-sedan turbochargers, according to some General Motors engineers.

Engineers at Chrysler Motors, where 60 percent of the four-cylinder engines produced since 1984 have been turbocharged, say their turbo cars are threatened.

And Toyota engineers also say that keeping turbochargers will present a technological challenge.

Chrysler, which relies on turbocharged engines more than either Ford Motor Co. or GM, insists it will continue to use turbochargers. Chrysler has built 976,000 turbo four-cylinder engines and will reach one million in early 1990.

But Chrysler also will have additional V-6 engines available for

Wary dealers reduce orders as sales fade

By Michelle Krebs and Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTERS

DETROIT — Anticipating a continued slowdown in sales through the rest of the year, Big 3 dealers are ordering fewer cars for the 1990 model year than they have ordered in the past few years.

Cautious dealer ordering due to anticipated soft sales will continue to trigger the temporary shutdown of more assembly plants.

Last Friday, Ford Motor Co. Chairman Donald E. Petersen confirmed dealer fears. He acknowledged to reporters that he believes second-half car and truck sales will remain soft, and that the calendar 1989 total could dip as low as 14.7 million units, some 300,000 below forecasts made just six months ago.

"You'll tend to see difficulties centering in the lower part of the market — both cars and trucks — because interest rates tend to hurt people in the lower income bracket," Petersen said.

He said trucks will continue to sell at a 5.0 million pace, which would put the year's car sales total well below 10 million.

Petersen was looking ahead. Looking back, the U.S. Commerce Department said the seasonally adjusted annual selling rate in the first half was 10 million cars and 4.6 million light trucks.

In the the first six months of 1989, car and light-truck sales fell

Olds adopts mandatory ad fee for dealers

By Laura Clark and Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTERS

DETROIT — Oldsmobile will follow Chevrolet's and GMC Truck's lead and will assess its dealers a mandatory fee to pay for local advertising beginning in the 1990 model year.

The fee will be levied on all 1990 Oldsmobile models, and informed dealer sources say other divisions — specifically Buick and/or Pontiac — may follow suit.

Top advertising executives at Buick and Pontiac insist the 1 percent assessment for dealer advertising is voluntary, but some Buick and Pontiac dealer groups are already being strongly encouraged by the divisions to use the 1 percent system.

The Oldsmobile program will be patterned after those instituted at the start of the 1989 model year by Chevrolet and GMC Truck. Dealers are assessed 1 percent of the invoice price on every vehicle delivered to dealers — except for fleet and GM employee discount vehicles — to fund local advertising. Twenty-five percent of the contribution is refunded to dealers to pay for advertising for their own stores after they present advertising proofs and receipts to the division.

For dealers who do not want to be members of a dealer ad group, Oldsmobile will provide refunds on 25 percent of their contributions so they can advertise their own stores. The division will put the other 75 percent towards regional factory advertising.

GM contends that the 1 percent assessment boosts the division's share of advertising voice vs. its competitors. A lower share of advertising voice means that competitors who sell fewer cars are doing proportionately more advertising.

But dealers argue GM is shifting advertising expense to them.

"We are clearly opposed to mandatory advertising programs; we feel it is shifting the cost from the manufacturer to the dealer," said Frank E. McCarthy, executive vice president of the National Automobile Dealers Association, who expects protests from smaller Oldsmobile dealers over the new program.

Frankfurt pullout is Hyundai's latest European woe

By Jean-Jacques Renaux
STAFF CORRESPONDENT

BRUSSELS, Belgium — Hyundai Motor Co.'s withdrawal from September's Frankfurt auto show comes as another sign of the South Korean maker's troubles to gain a foothold in Europe.

Hyundai had been expected to use the show — Europe's largest — as a launch pad for entering West Germany, Europe's biggest national market. The company was planning to introduce the so-called "sporty looking car," a subcompact coupe derived from the new Excel. But it recently dropped out of the show, reportedly because of problems in putting together a dealer network in Germany.

MODERN MOTOR
Hyundai was expected to unveil this sporty coupe at the Frankfurt auto show.

The withdrawal is the latest in a list of setbacks — ranging from strike-related capacity shortages to cost pressures from higher tariffs — that seem to have conspired against Hyundai since it broke into Europe in 1987.

At that time, Hyundai announced plans to sign independent importers in most national markets. So far, the company has distributors in just five of Europe's 18 countries: Belgium, Italy, Luxembourg, the Netherlands and the United Kingdom.

Along the way, Hyundai has lost its import license in Greece and reportedly is having trouble naming distributors and signing dealers in such countries as Austria, Switzerland and West Germany.

In 1988 Hyundai sold 18,250 passenger cars in Europe, according to industry estimates, taking an average of 0.3 percent of the markets where it competed. Its best showing was in the United Kingdom, where it held a 0.5 percent share of the car market with 11,365 sales. Hyundai also sold 819 commercial vehicles there.

However, Hyundai's United Kingdom car sales have declined by some 20 percent in the first five months of 1989.

"We are under pressure," said John Bell, sales manager at Hyundai United Kingdom. "And we expect to be less profitable in 1989 than last year."

Hyundai's growing pains can be traced to a variety of causes. Among them:

- Strikes and industrial unrest in South Korea for the past two years have delayed the launch of the compact Sonata and continue to disrupt exports to Europe. One importer, returning from Korea recently, spoke of parking lots crowded with unfinished cars

SQUEEZED: *Connecticut lemon law KO'd; state arbitration ruled unfair to makers*

By Helen Kahn
SENIOR CORRESPONDENT

Connecticut's lemon law, one of the toughest in the nation, has been overturned by an auto industry challenge that has stopped the state-run arbitration program.

While the state Supreme Court decision, in effect, guts the Connecticut law, manufacturer-run voluntary arbitration programs will continue to be offered to consumers to settle warranty disputes. But the fate of 100 pending cases and those that went against the manufacturers during the past five years may be up in the air as a result of the ruling.

The court last week held unanimously that the state's second-generation lemon law — passed in 1984 — is unconstitutional because it doesn't give auto companies the same access to court review of adverse decisions by arbitrators that it gives consumers.

Under the Connecticut law, consumers disappointed by an arbitrator's decision can go directly to court and get a trial on the issues, but a disappointed automaker must either abide by the arbitrator's decision or challenge it only on severely limited grounds such as bias or error by the arbitrator.

The Motor Vehicle Manufacturers Association and the Automobile Importers of America challenged the law on three counts. They won on one count and lost on the other two.

The court ruled against the automakers on the issue of their "right to a trial by jury" and their claim for due process and equal protection under the law because they have to pay a $250 filing fee to defend against a consumer complaint unless they can show economic hardship.

A similar challenge involving New York's lemon law is before a state court in Albany.

William Crabtree, MVMA's general counsel, said, "We are pleased with the decision of the Connecticut Supreme Court, which held that the Connecticut lemon law violates the Connecticut Constitution. The manufacturers' privately sponsored consumer arbitration panels for warranty claims are not affected by this decision and remain available for consumers."

Acting Attorney General Clarine Nardi Riddle said the court may have taken the law "off the road, but the law is only temporarily in the shop for repairs." She added that the decision "includes its own repair manual, a blueprint that we can use to repair the law, and that's exactly what I plan to do."

The court said a possible solution would be to give manufacturers their day in court, which would include a "de novo review of questions of law and a substantial evidence review of questions of fact." That would give the automakers broader access to judicial review while accommodating the lemon law's "purpose of avoiding costly litigation."

The ruling also throws into question decisions that have gone against the manufacturers. They may be able to request new hearings as a result of the Supreme Court's ruling.

Chrysler Motors said it would not challenge any of those decisions, and it offered to have the 20 or so cases pending against it heard by Chrysler's customer arbitration board.

Those cases are among more than 100 disputes over unsuccessful repairs made on cars under warranty that are pending before the state-run arbitration board. But, according to Assistant Attorney General Garry Desjardins, negotiations are under way to see if they — and perhaps later cases — can be settled on a voluntary basis as a temporary measure until the law can be changed.

But the state Legislature has recessed and won't return until Feb. 7, 1990. That session is scheduled to last only until May and deal with financial matters only, although some expect the lemon law revisions to be fitted into the schedule.

Former Connecticut legislator John Woodcock, the so-called father of the lemon law, said he believes a special session of the General Assembly may be possible as early as July 17, with the program back on track the following day.

Woodcock told Automotive News that the Connecticut lemon law, in effect since Oct. 1, 1984, "filled a federal vacuum" created by the Federal Trade Commission. He said he is sure the state will continue to do what it has to "to address this important consumer concern."

Discovery gives Land Rover a three-vehicle lineup.

Rover's Discovery

2-door model won't be sold in U.S.

By Daniel Ward
STAFF CORRESPONDENT

LONDON — Land Rover's new two-door, mid-range, four-wheel-drive model will be called Discovery and will debuts at the Frankfurt auto show in West Germany in September.

The launch will give the Rover Group subsidiary a three-model lineup for the first time.

Discovery will be priced between the base Land Rover and the Range Rover.

Company officials are mum on Discovery's production plans.

The new model is strictly European; there are no plans to market Discovery alongside the Range Rover in the United States.

Because it is a two-door model, Discovery would be subject to the U.S. Customs' ruling that such vehicles are trucks and subject to a 25 percent tariff.

Four-door Range Rovers, along with other four-door sport-utility vehicles and passenger vans, were ruled to be passenger vehicles subject to a 2.5 percent duty. Imported cars also are subject to a 2.5 percent duty.

Discovery will have an 84-horsepower, 2.4-liter, gasoline-powered four-cylinder engine. The Range Rover has a V-8. The new vehicle also has a shorter wheelbase than the Range Rover.

Discovery is Land Rover's first new vehicle since the Range Rover was launched in 1970. Its design follows familiar Land Rover lines and it has an aluminum body bolted to a welded steel chassis. Suspension includes coil sprung live axles.

The launch of a third model comes when Range Rover's sales continue to climb worldwide, including the United States. U.S. sales for the first six months were up 52 percent to 2,400 units.

Skinner to decide on light truck safety standards

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Transportation Secretary Samuel K. Skinner will make recommendations to the White House within 90 days on which passenger-car safety standards should be applied to light trucks, sport-utility vehicles and vans.

Those recommendations will focus on improving light-truck, sport-utility-vehicle and van safety in four areas — head restraints, side impact, roof-crush and rear-seat lap/shoulder belts. Skinner is also expected to address the issue of whether car passive-restraint requirements should be extended to these vehicles.

The Transportation Department's timetable was outlined in a letter to Sen. Ernest Hollings, D-S.C., chairman of the Senate Commerce Committee, which last month accused DOT of foot-dragging on light-truck safety.

Skinner wrote the letter to answer those charges and to head off legislation that would establish timetables for new NHTSA light-truck and van rules.

Skinner said legislative mandates are not necessary.

"As I stated in my confirmation hearing, I place a high priority on the safety of all our transportation systems including motor vehicles used for personal travel," he said.

"I wish to assure you that the department is moving expeditiously to improve vehicle safety, including rulemaking for additional LTV (light truck and van) safety standards."

Skinner said his discussions with the Bush administration will not address the rollover issue because NHTSA is still researching the problem and that the agency will not have enough data to propose a rollover regulation until year's end.

"I assure you that we will not tolerate delays in the research schedule," Skinner said.

Barry Felrice, NHTSA's associate administrator for rulemaking, said the agency expects Skinner to approve a final rule mandating rear shoulder/lap belts for light trucks and vans within 90 days and a head-restraint regulation before the end of the summer.

But once the roof-crush, side-impact and passive-restraint recommendations are made, Felrice said, the final decision on those standards could get tangled up in various levels of the Bush administration.

One such review may occur in the Office of Management and Budget, which reviews all regulations for economic feasibility. Felrice said NHTSA is presenting its research on high-mounted brake lights for light trucks and vans. It shows the lights are effective only on certain types of trucks.

Skinner

*—U.S.-built Volkswagen models sold after June 30, 1988, are included in import totals.

SALES

FROM PAGE 1

6.55 percent below last year's first-half total.

In June, car and light-truck deliveries in the United States were 10.66 percent below last year's strong showing. The month closed with a 19.96 percent downturn in domestic car sales for June 21-30.

The Big 3 have set ambitious production schedules for the fourth quarter, auto company sources said. But company sources as well as industry analysts expect automakers to trim those schedules.

The Big 3 have been forced to close plants in the second and third quarters because of high inventories. Further cuts in third-quarter production could be announced.

General Motors already had extended summer shutdowns at a number of plants because of swelling inventories. And last week, GM lengthened the shutdowns at some plants, affecting nearly 16,000 workers.

The Wilmington, Del., plant will be idle for three of four weeks in July. It previously was scheduled for model changeover during a weekend. The Linden, N.J., plant will close for a month, a week longer than previously planned. The plants build the Chevrolet Corsica and Beretta.

GM also said its Arlington, Texas, plant will begin a three-week shutdown July 13. The plant, which produces the Cadillac Brougham, Oldsmobile Custom Cruiser and Chevrolet Caprice, was to have gone through model changeover during a weekend.

Ford Motor Co., for the first time since the economic recovery started six years ago, closed plants due to climbing inventories. The Edison, N.J., and Wayne, Mich., plants, which assemble Escorts, were down in late May/early June and again the final week in June. Extended summer shutdowns are set at other Ford plants.

Chrysler Motors cut production at its Sterling Heights, Mich., plant due to slow sales of Dodge Shadow and Plymouth Sundance.

Despite the first-half sales slip, dealers remain optimistic that the slide is temporary. Many said they expected to order more heavily later in the model year.

"We are cutting back (our 1990-model-year) orders about 20 percent," said Dave Gill of Dave Gill Pontiac-GMC in Columbus, Ohio. "We hope that it's temporary. Sales are off, and right now we have the same availability of cars as we did last year at this time. That hurts a little."

Industry analysts and economists aren't sounding the recession alarm either. While analysts don't predict a sales upswing anytime soon, they say the present level of vehicle sales is more normal than in recent years. The industry couldn't sustain the record numbers of the past six years, they say.

Economists point out that consumer confidence remains relatively strong, employment is high and interest rates have fallen.

Dealers say they aren't ordering as many 1990 models initially because of the sales slide and because they want to reduce their inventories. By keeping inventory down, they can reduce their floorplanning expense.

Dealers say they also are waiting for the Big 3 to announce their 1989-model cleanup programs this week before placing big orders for 1990 models.

In addition to announcing their incentive programs, GM and Ford are to disclose plans to compensate dealers for vehicles in stock when the new model year starts.

Earlier this year, the two companies said they wouldn't pay the same carryover allowance they traditionally have paid dealers. GM sources said the automaker will reveal its plan to dealers this week; Ford has said it will tell dealers its plans after GM's announcement.

"We keep hearing there won't be a proper carryover allowance so we're being cautious," said Bruton Smith of Town & Country Ford in Charlotte, N.C. "We've cut back about 25 percent. Sales are off about 11 percent. We have too many cars."

Auto analysts said the slide in June and first-half sales was the result of a saturated market.

"Market saturation has to be paid for," said David Healy, auto analyst with Drexel, Burnham and Lambert. "It's certainly not a disaster."

Another reason for slow sales, analysts said, is that potential customers have late-model vehicles on which they owe more than the vehicle is worth as a trade-in, making it difficult to deal in the showroom.

In the first six months of 1989, combined domestic and import car sales fell 7.19 percent below last year's total, and light-truck deliveries were down 5.15 percent.

Three of the Japanese automakers with U.S. transplant operations reported gains of 3 to 10 percent in first-half retail deliveries of imported and U.S.-built cars. The Big 3 domestic makers showed sales declines of 4 to 10 percent.

Deliveries of U.S.-built cars declined 6.74 percent in the first half, while import-car sales sagged 8.35 percent. The imports' market share slipped less than half a point, to 27.48 percent from last year's 27.82 percent.

Sales charts compiled by Karen Datkowski.

SALES

FROM PAGE 44

Although light-truck deliveries for the first six months declined, they accounted for 31.84 percent of the new-vehicle market. That was up from the last year's 31.37 percent.

The Big 3 lost more than half a point of the combined U.S. car and light-truck market in the first six months this year. They took 74.67 percent of the total compared to 75.34 percent a year ago.

Market shares moved around in the first six months. Including captive imports and light trucks, GM and Chrysler each lost more than half a point, while Ford gained more than half a point.

The five major Japanese manufacturers and their transplants continued to capture more of the U.S. vehicle market. Toyota, Honda, Nissan, Mazda and Mitsubishi took 18.40 percent of the car and light-truck market compared to last year's 16.64 percent.

Among the Big 3, Ford delivered 4.14 percent fewer cars and light trucks in the first six months of 1989. GM's total sales fell 8.32 percent and Chrysler's slid 10.50 percent below last year's comparable six months.

Automotive News Staff Reporters Louise Kertesz and Dutch Mandel contributed to this report.

Import sales tumble 8% for first half

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Import sales dropped more than 10 percent in June, contributing to an 8.35 percent drop in volume during the first six months of 1989.

Import sales were off 128,435 units during the first half compared to the year-ago period.

Mitsubishi, Acura, Nissan and Eagle imports posted substantial gains, but they were more than offset by a dozen or so imports with significant sales dips.

In June, 258,179 imports were sold, down 10.51 percent from 288,500 last year, and just a tick better than the 11.31 percent downturn in the domestic market.

The Big 3's captive imports and cars from Europe performed poorly during the first six months of 1989. Only Eagle was able to post a gain among captive imports.

For the Europeans, only BMW could eke out a tiny first-half sales increase, up 63 cars or 0.18 percent to 34,849, after a June that was down 312 units to 5,841. No other European make was able to outperform the declining market.

The Japanese as a group were the best off, but there were both winners and losers among them. Japanese totals looked better when sales figures from U.S. transplant operations for Honda, Toyota, Nissan, Mazda and Mitsubishi were included.

The increasing impact of those operations was underscored by American Honda, which sold more North American-produced cars than imports of both Honda and Acura cars during the first six months of 1989.

Toyota, for example, sold 238,656 imported cars in the first half of 1989, down from 283,478 in the 1988 period, but sold 88,487 U.S.-built cars, up 220.9 percent, for a combined total of 327,143 cars, up 3.51 percent from the first half of 1988.

Nissan was a big winner after a down year in 1988. Nissan sold a combined import and U.S.-made car total of 263,447 in the first half, up 10.51 percent from 238,393 from the first six months of 1988.

Mazda sold 22,185 U.S.-built cars in the first six months of 1989 compared to 14,005 last year.

Mitsubishi also posted a strong gain using new U.S. manufacturing muscle. With 11,230 U.S.-built cars in the first half of 1989, total sales jumped to 50,972 from 35,040, an increase of 15,932 or 45.64 percent.

Machine tool orders dip 37%

Auto market flat, builders declare

By John Wisely
SPECIAL CORRESPONDENT

Total machine tool orders fell 37 percent in May, compared to the year-ago month, according to the Association for Manufacturing Technology, a group that collects data from machine tool builders.

Auto analysts warn that monthly order numbers are often erratic and a one-month drop does not necessarily affect automakers' plans. But Albert Moore, president of the association, said, "The slackening in (total) orders we are seeing is cause for concern."

The association does not break out the numbers by industry but because the automotive market buys a large portion of all machine tools, 35-40 percent by some estimates, any fluctuation in total orders usually shows up in the automotive market.

Tool builders generally agreed that the automotive market for machine tools is flat and said several factors could cause a decline in monthly orders. They include uncertainty about future federal clean-air legislation and requirements and economic conditions.

David Reichard, vice president of sales and marketing for Comau Productivity Systems, a Troy, Mich., firm specializing in assembly of machine tool systems, said, "New corporate average fuel economy standards could be slowing orders from engine plants because the automakers are unsure which engines are going to be continued and which must be changed."

Other tool makers said automakers might have been surprised by the Bush administration's clean air plan and are now accelerating small-engine plans while proceeding more slowly with some of their larger engines.

Larry Von Moll, director of market development for Cincinnati Milicron, a machine tool group, said economic uncertainties — particularly interest rates — could cause monthly orders to fluctuate. He added, "Tool orders are strongly influenced by the timing of projects."

A Ford Motor Co. spokesman said the automaker has not cut orders and is proceeding at normal rates. Chrysler Motors said machine tool orders have remained consistent because they are tied directly to long-range product programs.

General Motors was the only company to show any kind of decline. But lower purchase levels have been pretty typical for the last 18 months, according to a GM spokeswoman, who said the company's major capital outlays for new equipment were made three years ago. "Sooner or later, it will pick up again," she said.

Eli Lustgarten, a securities analyst with Paine Webber who follows machine tools, said "last year's numbers were somewhat higher and that was partially due to Saturn orders."

In the machine-tool world, the auto industry includes transplant makers, suppliers and overseas manufacturers as well as the domestic Big 3.

Total machine tool exports, including automotive, plunged 62 percent in May, compared to May 1988, and Moore cited a strong dollar as a contributing factor.

Auto output tops '88 for first half

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

Domestic auto production for the first half of the year totaled 3,830,661, up 2.41 percent over the 3,740,470 completed during the first half of 1988.

Auto output for the second quarter was 1,931,362, 1.69 percent more than this year's first-quarter total of 1,899,299 but 4.93 percent below 1988's second-quarter build of 2,031,514.

Last month's car assembly of 612,914 dipped 10.03 percent from the May total of 681,261 and was 16.00 percent below the year-ago month's 729,633.

Automakers' targeted output of 41,379 last week was 66.64 percent below the prior week's 124,044. Plants worked a four-day week because of Independence Day, and some were down for model changeover and vacation.

Last week's estimated production was shared as follows: General Motors, 66.86 percent; Chrysler Motors, 22.23 percent; New United Motor Manufacturing Inc., 5.92 percent; and Toyota Motor Manufacturing U.S.A., 4.99 percent.

Ford Motor Co., Honda of America Manufacturing, Mazda Motor Manufacturing U.S.A., Nissan Motor Manufacturing and Diamond-Star Motors are closed for vacation and are expected to resume production July 17.

Truck output during the first half totaled 2,299,625, 6.19 percent above the 2,165,632 trucks built in the first half of 1988.

Second-quarter truck production of 1,141,287 was 1.47 percent lower than the first-quarter build of 1,158,338 but was 5.12 percent more than last year's second-quarter total of 1,085,670.

Truckmakers built 380,749 trucks in June, 3.10 percent fewer than May output of 392,946 but 1.48 percent more than the year-ago month's 375,178.

Car build dips 15% in Canada

Canadian automakers produced 521,536 cars in the first half, down 15.20 percent from 614,998 in the comparable period last year.

Auto output in the second quarter was 268,702, an increase of 6.28 percent over the first quarter's 252,834, but it was 17.40 percent below the year-ago second quarter's 325,322

Car production for June totaled 91,654 units, down 0.12 percent from May's 91,762 and down 17.73 percent from the year-ago month's 111,406.

Truckmakers built 522,626 units in the first half, 5.72 percent above the 494,346 assembled in the first half of last year.

Second quarter production totaled 262,196 units, up 0.68 percent from the first quarter's 260,430 and 5.35 percent above last year's second-quarter build of 248,885.

June truck assembly of 89,026 fell 1.80 percent from 90,661 the prior month, but it was 1.08 percent above the year-ago month's 88,071.

GM leads the way as incentives sweep industry

Sales rebound

Car and light-truck sales increased nearly 9 percent in the first 10 days of July, reversing the trends seen in June.

- Nissan sales doubled.
- Honda fell a third.
- General Motors led the Big 3 in light-truck gains, up 13 percent, and overall, up 12 percent. Ford gained most in car sales for the Big 3, up 17 percent.

The story is on Page 43.

By Michelle Krebs and Laura Clark
AUTOMOTIVE NEWS STAFF REPORTERS

Frustrated by slow sales, domestic and import automakers announced a rash of consumer and dealer incentives last week.

Almost every major auto retailer has new programs — from traditional incentive promoters such as General Motors, which announced its most generous cleanup program in three years, to American Honda, a surprising newcomer to the incentive arena.

GM unveiled sweetened rebates and alternative cut-rate loans, but dealers say, "Stay tuned — there could be more." The GM consumer incentive program was coupled with a dealer rebate designed to clean out 1989 models.

Dealers were told the consumer rebate/finance program is in effect until further notice. That allows GM to sweeten it if it is one-upped by Ford Motor Co. Even if Ford only matches the incentives, GM could make changes in August if the present program doesn't clean out the 1.5 million vehicles in inventory.

Claude "Bud" Moore, GM vice president in charge of the customer sales and service staff, predicted GM's program will clean out a million units.

But, he acknowledged, "we're always going to be responsive to whatever competition does."

Some dealers are concerned that since the program has no end date, consumers will wait for an even better deal.

"We don't anticipate consumers waiting," Moore responded. "The biggest availability of colors, options and models out there will be the earliest ones."

GM's consumer incentives are virtually unchanged from the previous program. Cash rebates on some models have been boosted.

GM increased the financing rate on 60-month loans. Moore said GM wanted to offer the best rates on the more popular three- and four-year loans.

Dealers said the higher rate on 60-month loans probably is to discourage consumers from opting for them. Dealers say many potential buyers can't buy a new vehicle because they owe more on their present vehicle than it is worth as a trade-in because of the stretched out term.

GM's dealer incentive program is

DOMESTICS

Top American import execs know the end can be early

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — The retirement of Max Jamiesson as executive vice president of Hyundai Motor America thins the ranks of the first generation of top-ranking American officers of Asian auto importers.

Jamiesson, 56, will become a Hyundai dealer on the Monterey Peninsula in Northern California, where his wife of one year, Sue Jamiesson, owns a Toyota dealership. Sue Jamiesson also is opening a new Hyundai dealership in nearby Salinas. Max Jamiesson has owned a home in Carmel Valley for three years.

Top Americans at several Japanese-based companies see a natural maturation in the gradual shift to a second generation of American leaders such as Tom Mignanelli, 44, executive vice president of Nissan Motor Corp. in U.S.A. And they know that Japanese companies often expect early retirements.

"The commonality of personalities used to be there, partly because our backgrounds were so similar," said C.R. "Dick" Brown, 56, executive vice president of Daihatsu America in Los Alamitos, Calif. "Most of us were ex-Chrysler or ex-Ford, but nearly all were from domestics."

Brown, a former Chrysler employee who also was involved in the startup of Mazda in the United States, was the original top American at Daihatsu.

"You have to take the nature of the import companies into consideration," said Richard Recchia, 49, executive vice president of Mitsubishi Motor Sales of America and a former Chrysler employee. "Until 10 years ago, the import auto business in this country was very small. So when (Asian) companies wanted to establish large-scale U.S. operations, they had to tap a talent pool somewhere, and that was the domestics."

But top American managers reject the notion that there is a special bond between them or that they share many special traits.

"We have some things in common, but it's not fair to make broad generalizations like we're all greater risk-takers," said Jack Reilly, 62, senior vice president and general manager of American Isuzu Motors in Whittier, Calif.

Max Jamiesson will retire as COO of Hyundai Motor America and become a dealer in northern California.

Stocks jump for Honda as sales slip

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — A sharp runup in new-car inventories may be another sign that Honda is feeling the heat of competition.

American Honda Motor Co.'s combined stocks of imported and U.S.-built cars jumped to a 49-day supply on July 1, up from 28 days on June 1. The days' supply is Honda's highest since 1985, and contrasts with a 16-day supply on July 1, 1988.

That is still well below the industry average of 73 days' supply on July 1, but it is weeks beyond Honda's typical inventory.

Among all cars sold in the United States, inventory crept up six days' worth in June, to 73. An 11.08 percent fall-off in June new-car deliveries caused the July 1 stockpile of all U.S.-built and imported cars to reach 2,510,701.

At the end of the first half, Honda's domestic and import car stocks and days' supply numbers were double or triple its 1988 figures.

The inventory includes all cars at or en route to dealerships or in factory lots. Days' supply is calculated on the daily selling rate for the most recent month.

For Honda, the days' supplies were just 24 May 1 and 28 on June 1.

Sluggish June deliveries (Honda sales were down 13.27 percent in June) left Honda with 41.9 percent more cars in stock on July 1 (76,237) than at the beginning of June.

Honda officials noted several mitigating factors, but like Honda's first-ever sales-linked "advertising allowances" to dealers, it is a sign that Honda is mortal after years of extremely low inventories.

Because Honda Division sells mostly domestically produced cars, its import inventories include

Marine Midland plans auto loan venture with giants

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

Marine Midland Automotive Financial, the largest bank financier of auto loans, plans to team up with two other huge companies in a joint auto financing venture.

Marine Midland expects to sign an agreement by year's end with:

- Tokyo-based Orient Finance Co., Ltd., Japan's largest consumer credit company and a leading financer of autos in Japan, and
- Aon Corp., a Chicago-based insurance holding company with assets of $8 billion. Through one of its operating groups, Aon provides insurance services to more than 2,000 auto dealers.

The joint venture will expand the business of Marine Midland Automotive Financial Corp. It will provide retail and commercial financing as well as leasing and related insurance services to automobile dealers, Marine Midland said.

The three parties said they plan to sign a definitive agreement later this year. The venture is subject to regulatory approvals and final approval by boards of directors of the companies.

Marine Midland Automotive Financial is a wholly owned subsidiary of Marine Midland Banks based in Buffalo, N.Y. It manages about $7 billion in auto-related assets nationwide.

"We believe the joint venture will enhance our competitiveness and prove to be an opportunity to provide a better range of services to customers," said a Marine Midland spokesman.

He said more resources will be available to the joint venture than are available to the bank subsidiary.

Since the agreement has yet to be finalized, no further details were available, the spokesman said.

Marine Midland is the most formidable competitor to the automakers' captive finance subsidiaries. It is a partner in financing ventures with Subaru, Porsche, Mazda and Saab-Scania. Hyundai and Marine plan to form a joint financing venture this fall.

Robert Reich, Marine Midland division executive, said last spring that Marine is "always looking" for more relations with automakers. "There aren't that many unaffiliated ones left," Reich said.

Last week Marine Midland Banks, which in 1985 became the first institution to package and publicly sell auto loans, registered an offering of about $170 million of auto-loan-backed securities. It has packaged and sold as securities more than $1.7 billion in auto loans.

Saturn adds 33 dealers, promises financial help

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

The latest additions to Saturn's dealer network signed their franchise agreements last week. AUTOMOTIVE NEWS/JOE WILSSENS

SPRING HILL, Tenn. — General Motors' Saturn Corp. named 33 dealers for its "second wave" of U.S. markets last week and surprised its dealers with a sketchy offer of special financing to help with construction and startup.

Saturn also unveiled a prototype dealership that places the service department out front rather than the traditional "backshop" positioning.

The newly assigned franchise territories include Chicago, Detroit, Washington, Philadelphia, Indianapolis, Baltimore, San Jose, Calif., Minneapolis, and Milwaukee. They are slated to get Saturn vehicles in spring 1991, four to six months after the new cars go on sale in major East and West coast markets.

The new dealers join 26 that were awarded territories last February, bringing the total number of areas assigned to 59. Those areas are expected to have 190 Saturn locations.

Saturn plans to introduce a four-door sedan and a coupe by the end of 1990.

Donald W. Hudler, Saturn vice president of sales, service and marketing, surprised a number of the first- and second-wave dealers at the announcement with a new financial assistance plan to help finance dealership construction and start-up.

Hudler said the company has arranged for dealers to receive preferred financing through General Motors Acceptance Corp. and Sovran Bank of Norfolk, Va. He declined to reveal details of the plan, which he said are not finalized.

As it announced the new dealer agreements, Saturn also unveiled the architectural plans that will be used at all its locations. The design features a service center in the front of the building and outside canopied walkways that are an extension of the showroom, according to its designer, Paul Kennon, design principal for CRS Sirrine of Houston.

"You will notice that there is no back door to the building," Kennon said. "It's really an expression of Saturn's philosophy toward the customer. Selling the car and servicing it are equally important, and so they are side by side."

Saturn said construction of the first 90 to 100 dealerships is expected to begin early next year. But a number of the second-wave dealers said they did not plan to start construction until about six months before they begin operations, which would mean the third quarter of next year.

Hudler said the average dealer investment for the first Saturn stores will be $3 million — "plus

Partners: *Honda aims at Europe through a stake in Rover; Rover gets piece of Honda plant*

By Daniel Ward and Mary Ann Maskery
AUTOMOTIVE NEWS STAFF

Honda Motor Co. and the Rover Group will strengthen their decade-long partnership with Honda buying a 20 percent stake in the British automaker and Rover acquiring an equal share in a new Honda assembly plant.

Under the agreement, Honda will pick up its first equity stake in a European auto company. Rover, meanwhile, will own 20 percent of a new £300 million ($489 million U.S.) assembly plant that will produce cars under the Honda and Rover badges.

The move represents a further departure from Honda's strategy in the United States, where the automaker has expanded without joining hands with a domestic partner.

But in face of Britain's strict requirements on local content, Honda will be relying on access to Rover's suppliers. Within 18 months after the start of regular production in fall 1992, Honda expects to reach 80 percent local content.

The plant, to be built next to Honda's engine plant in Swindon, England, will begin early production in late 1991. Capacity of 100,000 is expected to be reached two years later. It will employ 1,300 workers.

The deal adds yet another dimension to the Honda-Rover partnership, which dates back to 1979 when Rover began building the Honda Ballade under license. The two companies jointly developed an executive class sedan that is sold in the United States as the Sterling and the Acura Legend. The companies have since modified that model, with Honda developing a coupe and Sterling offering a five-door liftback.

This month, Honda will begin producing 1.6-liter engines in England for the Rover 800 and Honda Concerto. Those cars will be built by Rover later this summer.

"Our collaboration with Rover is the nucleus of our presence in Europe," said Honda President Tadashi Kume, in making the announcement last week in London.

"Our two companies are entering into significant minority cross shareholders," he said. Honda and Rover will continue to respect their individual identities and, Kume added, "by so doing, both companies will strengthen their positions in the European automobile industry more effectively than if each were to act separately."

Honda also announced that the engine plant will increase capacity from 70,000 engines annually to nearly to 200,000 by 1994.

In Tokyo, Honda Executive Vice President Koichiro Yoshizawa said the decision evolved primarily from a desire to strengthen the relationship with Rover.

Capital was not a major concern, he said. Honda could have gone alone, but decided cooperation was more beneficial.

There has been no decision yet on how the 100,000 units will be divided between Honda and Rover, but Yoshizawa said he personally believes Honda should be allotted more. The model will be a new one, what Yoshizawa described as an upper middle class model, with an engine size larger than the 1.6-liter engine in the Concerto/Rover 800.

The new plant will be run under Honda management, with models developed by Honda. Despite the exchange of stock shares, both companies will remain independent, each sending only one part-time director to the other's board.

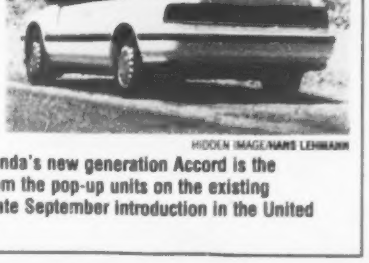
How much a 20 percent interest in Rover will cost Honda has also not been decided, Yoshizawa said.

It will be the end of the year before details of the agreement will be finalized. At the moment, it is unclear whether money will change hands in the deal, which appears to give Honda significantly more assets than it is handing to Rover. The European Commission is likely to examine the deal closely.

Honda's sales target in Europe is 200,000 units a year by 1994, according to Yoshizawa. Last year, Honda sold 149,199 units. That figure is expected to be boosted next year by at least 30,000 Rover-built Concertos.

With last week's announcement, Honda, Nissan and Toyota will have a combined car capacity in Britain of 500,000 units by the mid-1990s. Nissan and Toyota have been pursuing their projects without the help of a European partner.

1990 Accords uncovered



HIDDEN IMAGE/HANS LEHMANN

The biggest visible change in Honda's new generation Accord is the switch to exposed headlamps from the pop-up units on the existing models. The car is slated for a late September introduction in the United States.

Six European makers pay $30 million in CAFE fines

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Six foreign luxury automakers last month paid more than $30 million in fines to the U.S. government for failing to meet 1987 fuel economy standards.

The heftiest fine was $20.5 million paid by Mercedes-Benz of North America for achieving a corporate average fuel economy rating of 22.3 miles per gallon against the 26 mpg standard.

Mercedes-Benz paid the fine, but reserved its right to challenge the assessment, while the other five acknowledged making the payments and called them a cost of doing business.

Companies are penalized $5 for every tenth of a mpg per car that they fall short of the standard. They are allowed to use credits generated in three model years before or after the model year they fall short of CAFE.

Mercedes is also contesting $25 million in fines it paid last December for the 1985-86 model years. It was to apply credits generated beyond the three-year carryfoward/carryback period for credits.

Jaguar Cars paid the second highest fine last month, $5.3 million, also for 1987. In March, Jaguar paid $8.04 million for the 1986 model year.

NHTSA, the agency that assesses the fines, said BMW of North American paid a $1.09 million fine on a CAFE shortfall that would have netted a $5.12 million penalty. BMW said the government

Corrections

- A story on the July 10 engineering page incorrectly said a list of Underwriters Laboratories-approved R-12 recovery and recycling machines had been posted. According to Andrew Torroll, a UL staff engineer, UL was unable to post a list by its July 1 deadline because required testing was not complete. Torroll said he hopes a list will be posted soon. A photo caption accompanying that story incorrectly identified a Robinair recycling unit as UL approved.
- A July 10 story on import car sales incorrectly said that only BMW among European manufacturers improved its sales for the first half of 1989. Volvo sales for June and the first half of 1989 increased more than any other European competitor. Volvo June sales rose 542 cars to 9,695, up 5.93 percent from June 1988. For the first half of 1989, sales rose 3,422 units to 53,043, up 6.89 percent from the first half of 1988.
- The story also incorrectly stated that only Jeep-Eagle Division posted a first half gain among captive imports. Ford Motor Co. captive imports rose 1,157 cars, or 3.28 percent, to 36,426 for the first half of 1989 despite a 18.88 percent drop of 1,101 to 4,986 for the month of June, compared to similar periods in 1988.

Alfa Romeo delays 164 launch again

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

ENGLEWOOD CLIFFS, N.J. — Alfa Romeo has delayed the introduction of its 164 sedan from January until March and will label the car an early 1991 model instead of a belated 1990.

The car originally was slated for a fall 1989 introduction as a 1990 model, but changes in the passenger compartment for the U.S. market pushed those plans farther and farther back.

The company is soft-pedaling earlier projections that it would double its dealer body and sell between 40,000 and 50,000 units within five years.

Darrell L. Davis, president and chief executive officer of Alfa Romeo Distributors of North America, said he plans to add 60 to 65 dealers to its 149-member network. As for sales, Davis said only that he is looking for steady, incremental growth.

The 164 will be priced between $22,000 and $29,000, depending on options, said Davis, who heads the distributorship formed last October and jointly owned by Chrysler Motors Corp. and Alfa Romeo's parent, Fiat S.p.A.

The advent of the 164, which is more mainstream than the rather odd-looking Milano sedan, marks the end of the "era of esoterica" at Alfa Romeo, Davis said.

Changes to the U.S. version of the 164 include such items as air conditioning, seat belt attachment points, window controls, instrument panel controls and seat cover materials, he said.

Pilot production is expected to begin this month, but production for U.S. sales isn't expected to begin until September. The car went on sale in Europe last year.

Soon after the 164 goes on sale in March 1990, Alfa will introduce a face-lifted version of its Spyder convertible, Davis said. The car will be a 1990 model.

A new Spyder convertible is expected around 1993, replacing the present model, which is a direct descendant of a 1966 model, Davis said.

"The new Spyder is really the essence of what people think of when they think of Alfa Romeo," he said.

But pending the arrival of the 164 there will be a "lull" in Alfa's sales, as the company sells down its present inventory and moves its headquarters to Orlando, Fla. this October, Davis said.

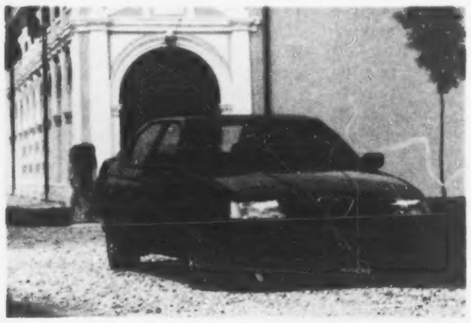
Meanwhile, sales are slumping.

Davis said the company projects sales of only 3,400 cars for the 1989 calendar year. The company sold 4,476 cars in 1988, compared to 6,320 in 1987. June sales were 241, for a six-month sales figure of 1,703, compared to 2,708 in the first half of last year.

Davis pointed out the company began 1989 with inventory that contained 1987 and 1988 models, mainly Milanos. But that problem has been eased by incentives that helped sell 581 Milanos in March.

The Milano will be phased out following the 164 introduction.

Davis said dealer stock as of last week included 310 Milanos and 650 Spyders, which he hopes to reduce to around 400 to 500 cars combined by the end of this year. He said he hopes to be sold out of 1989 models by the time the truncated 1990 model year begins.



Alfa's 164 will be introduced in the United States next March.

Lexus lands on U.S. shores
The first shipment of Lexus LS400 sedans is greeted at the Port of Long Beach in California by Toyota and Lexus executives. The V-8-powered car makes its debut Sept. 1 at 70 Lexus dealerships nationwide. From left are J. Davis Illingworth, Lexus vice president/general manager; Yale Gieszl, senior vice president, Toyota Motor Sales U.S.A.; K. Usuda, Lexus senior vice president/chief coordinating officer; Robert McCurry, executive vice president, Toyota Motor Sales U.S.A.; and Yukiyasu Togo, president and chief executive officer, Toyota Motor Sales U.S.A.

Warranty firm's demise stings dealers, buyers

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — About 40 U.S. car dealers and their customers have little hope of recovering any money from some extended service contracts sold by a collapsed Florida-based company and a related Canadian corporation.

The collapse of Thermo-Guard Warranty Co. and Canadian-based Guardall Financial Services Corp. will also affect more than 1,000 dealers and as many as 50,000 service contracts in Canada.

The companies are owned by Florida businessman Seymour Ravinsky, who agreed July 5 to hand over his assets — including the proceeds from the planned sale of his yacht "Motivation," estimated at $5.5 million — and those of his companies in Canada and the United States.

A Canadian bankruptcy trustee has taken over the assets of Guardall and Thermo-Guard Warranty. The trustee reported in an affidavit that about $12 million Canadian ($10.1 million U.S.) is missing from the trust funds Ravinsky's companies should have maintained. He alleged that more money would disappear unless Ravinsky, who lives in Boca Raton, Fla., were forced into personal bankruptcy in Florida.

The Ravinsky case is also being investigated for possible insurance fraud by the Commercial Crime Branch of the Royal Canadian Mounted Police.

Most "Thermo-Care" warranties in the United States are still being honored because the company funded and insured them properly.

But some customers in the United States have sued dealers who sold them Thermo-Care warranties that were not honored, and those dealers have virtually no chance of being reimbursed by the Canadian-based Guardall companies for work performed under the warranties, said Kerryn Downey, a bankruptcy trustee for the Supreme Court of Ontario who now controls the companies.

"Dealers are in a very difficult

Car output may dip to 1980s' low

Big 3 cuts mirror recession blues

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — U.S. car production in the third quarter could slip to the levels of third quarters in the recession years of the early 1980s if automakers continue trimming plant schedules to reduce bulging inventories.

Industry analysts predict that the Big 3, which have extended summer shutdowns, will slice their third-quarter production schedules even further because of slow sales and rising inventories.

In addition, analysts say even richer incentives than those announced last week are likely in August as automakers try to clear out stocks before the new model year begins in the fall.

Japanese automakers also could be forced to beef up incentives and cut back deliveries from Japan, analysts say. Production cutbacks at U.S. transplant operations are unlikely because it is less expensive for Japanese automakers to build cars in the United States than in Japan, according to analysts.

So far, output at Japanese-owned plants and joint-venture operations is preventing third-quarter car output in the United

see SHUTDOWN, page 42

High court review sought on auto defect cases

By Helen Kahn
SENIOR CORRESPONDENT

WASHINGTON — Trial lawyers and consumer groups have asked the U.S. Supreme Court to decide whether the Motor Vehicle Safety Act of 1966 and federal safety standards pre-empt damage claims alleging defective design brought at the state level.

If the high court agrees to review the case, the outcome may affect more than 100 cases charging that cars are defective because certain models aren't equipped with air bags or passive restraints and thousands of design defect cases involving other safety standards.

The petition also seeks a definition of an automaker's responsibility and liability if it meets only the minimum of any federal standard when superior and cost-effective technology exists that may improve crashworthiness beyond the standard.

The petition was filed by Trial Lawyers for Public Justice; Ralph Nader's Public Citizen Litigation Group; and Moquin & Daley, a Boston law firm that brought the case against General Motors that is now being appealed.

A federal appeals court upheld GM's position that federal law through "implied" pre-emption ruled out the 1984 product liability suit brought by Patricia Wood in Massachusetts.

She charged that a 1976 Chevrolet Blazer was defective because the automaker did not equipped the vehicle with an air bag.

Wood, an unbelted front seat passenger in the vehicle, was paralyzed in the 1981 crash.

In 1987 — in what the trial lawyers consider a landmark decision — a district court said that if Wood could prove her case, she was entitled to damages under Massachusetts law.

The court said the 1966 safety law neither expressly nor impliedly pre-empted her claim.

Two of the three appellate judges disagreed with that decision.

They accepted GM's contention that if Wood won, GM would be required to install air bags in all cars, which would be the same as a state-required safety standard, one explicitly pre-empted by federal law.

By requiring air bags, the court decision would have created conflict with the 1974 federal standard on restraint systems, which gave GM a choice between manual belts and passive restraints, the court said.

The two judges also contended that if Congress had been familiar with auto design damage cases, it would have made its position on pre-emption clearer.

The dissenting judge said the majority confused pre-emption of direct state regulation — which Congress allows — and the indirect regulatory enhancing effect of state-level suits — which Congress did not pre-empt.

The judge said Congress was familiar with developing tort law in the states and that is why it "saved" claims under state common law from pre-emption.

The Supreme Court appeal petition maintains Congress clearly spelled out its intent in the law when it said that "compliance with any Federal motor vehicle safety standard . . . does not exempt any person from any liability under common law."

The petition adds that Congress never-changed that position during the many times it amended the law.

Conversion market rocky; GM, Ford try incentives

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Wholesale van conversion shipments slumped 8.30 percent in May, according to the Recreation Vehicle Industry Association.

Demand has dropped sharply in the past few months as auto dealers, overloaded with inventory, curtailed or stopped ordering conversion units altogether, according to converters.

Recent General Motors and Ford van incentives will help clear out the 1989 models, but converters are still bracing for a tough fall.

Ford is offering a $1,000 rebate to customers on full-sized van conversions, and GM extended a $500 customer-rebate/low-interest program on small and large vans.

For July 7-31, Ford is offering $1,000 rebates on new 1988 and 1989 E-150 regular and E-150 Super Vans, equipped with RV converter equipment packages and reassigned to a Ford dealer from an authorized conversion firm.

Also eligible for the $1,000 are non-Ford consignment pool E-150 Econoline vans, equipped with RV converter preferred equipment package 743A or 745A and modified by a converter at the direction of a Ford dealer exclusively for sale by that dealership.

But Econoline vans sold to any conversion or body company for resale or transfer to another Ford dealer are ineligible for the rebate.

Full-sized vans, without the conversion packages, qualify for a $500 rebate.

Chevrolet and GMC extended a rebate program on vans through the end of the model year. It had been scheduled to expire July 10.

The GM program covers Chevrolet Astro/GMC Safari compact vans and all full-sized vans.

It offers $500 consumer rebates or low-interest financing as follows: 2.9 percent on 24-month loans; 5.9 percent, 36-month loans; 6.9 percent, 48-month loans; and 9.9 percent, 60-month loans.

Converters like G.R. Soos, vice president and general manager of U.S. Conversions in Elkhart, Ind., consider the low-interest financing a real attraction because van buyers tend to finance for longer periods than car buyers.

"Both the GM and Ford programs are going to help an awful lot," added William Snook, president of Coachmen Vans in Elkhart, Ind., and Good Times Van in Grandview, Texas.

Still, converters in other areas believe that at this late date, it's going to be a real struggle to move their 1989 inventory prior to the introduction of the 1990 models.

Said one converter, who declined to be named: "If they had announced their programs a month ago, a dealer might have ordered 10 or 12. Now, he'll take three or four. The '90s are coming out."

Some converters have been selling vans close to break-even, just to move them.

One company has been offering dealers a 90-day buyback guarantee. If the van doesn't move within that time, the converter will have to buy it back, resell it to another dealer and have the original dealer transfer title to the new one.

Typically, when chassis are resold like that, they have a 20 percent discount from their original selling price. In addition, the converter pays to ship the chassis from one area to another.

U.S. Conversions, which also produces Kentron and Premier vans, has been fortunate in not being overstocked, Soos said.

He said that "if sales pick up, it could blow a lot of inventory (out of converters' and dealers' lots) quickly."

Coachmen's sales were fairly strong until a month ago, Snook said. Then, dealers began forcing their inventories down. They stopped all conversion orders.

No matter how quickly the new programs clear out the 1989s, Snook fears that the beginning of the 1990 model year "is going to be tough because retail has turned down so much."

Like other converters, he expects to see a number of smaller converters shut down, sell off stock and wait for another good market before getting back into the business.

Van converter buys troubled rivals

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

The slowdown in van conversion sales is taking its toll; some converters in northern Indiana, northern Georgia and Texas are closing.

Barney Simon, a converter in the Elkhart, Ind., area, is stepping into the void. He is buying selected assets and hiring key people from some of those firms.

Simon owns Simon McCaffery Corp., known as SMC-Vantage, in Granger, Ind., and is a partner in Archer Coach Corp. in Middlebury, Ind. He recently formed New Vans Corp. in Granger.

New Vans' first purchase was Riviera Vans in Goshen, Ind.

Riviera, which converts more than 500 Chevrolet and Ford vans a year, ran into financial problems. They stemmed from changes Chevrolet made in its distribution system and from the more recent slowdown in market demand, according to Billy R. Powell, Riviera's former owner and a vice president of New Vans.

Simon said, "It's hard to be a one-horse show anymore — to be your own president, chief operating officer, your own purchasing agent, your own production manager. We're inviting some of these entrepreneurs into the fold."

New Vans is interested in conversion firms involved in bank foreclosures or bankruptcies, with good salespeople and diversity.

Simon said that, as part of a larger company, such small firms will be able to cut their overhead and buy materials and components more efficiently from a common vendor base.

Eventually, he expects to invite some vendors into partnership and also buy into key suppliers.

"We plan to create a nice vertically integrated company, with smaller (divisional companies) run by the original entrepreneurs who founded them," Simon said.

Simon said several converters have gone under and more will follow. The latter include companies that haven't legally been dissolved but whose buildings and employees have been idled.

Simon said that as news of his company's interest in troubled converters spread, he received phone calls not only from converters, banks and suppliers but also from auto dealers outside Indiana who were concerned that a converters they had done business with had run into hard times.

Winnebago to open plant in Texas

Winnebago Industries has purchased the Town and Country shopping mall in Temple, Texas, giving it the capability to produce about 1,000 customized trucks and vans there in the first year.

Part of the facility also will be used to provide additional sales and service support to Winnebago's motor home business.

Rex Shorten, general sales manager of Winnebago's van division, said the new customized truck and van operation being established in Temple will allow the company to enter Texas, Oklahoma and Louisiana markets.

But he expects most of that facility's production to be sold in Texas, mainly in major population centers such as Houston, San Antonio, Dallas and Fort Worth.

The van conversion market in Texas has been soft during the past few years, but officials see it coming back.

Generally, Winnebago has been prohibited from marketing in that geographic area because of high freight costs from its Forest City, Iowa, headquarters.

Prior to opening the Bear, Del., manufacturing operation earlier this year, the company had only marketed its vans in a six- or seven-state area near Iowa.

Winnebago has been on a diversification binge that includes giving more exposure to its name in customized truck and van conversion markets. The Bear, Del., facility allows it to sell van conversions and customized trucks on the Atlantic Coast for the first time.

Winnebago's sales of these vehicles are up 60 percent this year, despite the soft market. Shorten projects sales to reach 2,000 units by year end.

While most of the increase has come from the Bear facility and the new markets it opened, production and sales of Winnebago trucks and vans produced in Iowa also are up 20 percent, Shorten said.

"We've made some additional inroads in a relatively soft market, and our van operations are profitable," said.

Winnebago has a consignment pool account with Chevrolet, Ford and Dodge.

The Temple facility, in addition to producing specially outfitted pickups, Suburbans, vans and other types of trucks, also will be used as a warehouse distribution center to provide motor home parts to Winnebago and Itasca brand dealers in the Southwest.

A portion of it will be converted to provide a customer service facility for maintenance and repair of motor homes. Another part will be used for a new retail motor home sales facility that will be owned and operated by an independent RV dealer.

The 308,000-square-foot mall is located on a 29.5-acre site, adjacent to an interstate highway in south Temple.

RV industry prepares for 2 big shows and a new twist

The RV industry is gearing up for two traditionally large shows and experimenting with a novel used-vehicle show.

"Saddle Up for South Bend" is the theme for the 35th annual Midwest Manufactured Housing and RV show in South Bend, Ind., Aug. 8-13.

The show will open to trade-only members Aug. 8-10 and to the public Aug. 11-13. It will feature more than 1,300 products, according to Bob Kropf, show chairman and owner of Kropf Manufacturing in Goshen, Ind.

Featured entertainer is country and western singer Ronnie Milsap.

For the Recreation Vehicle Industry Association's 27th annual National RV Trade Show in Louisville, Ky., Nov. 28-Dec. 1, exhibit space totaling 503,994 square feet has been assigned.

The show is expected to draw 10,000 RV dealers and industry officials. It is not open to the public.

Manufacturers and suppliers were assigned exhibit areas June 28 at a national space drawing.

All available manufacturer space was assigned: 449,894 square feet to 94 manufacturers.

RVIA allocated space to manufacturers based on their contribution to RVIA received in fiscal 1988.

Non-RVIA members and new members were limited to 1,000 net square feet.

A total of 541 supplier booths were assigned to 234 exhibitors, leaving fewer than 20 booths to be sold.

From Oct. 11-15, the Pontiac, Mich., Silverdome will house a unique RV show, featuring used motor homes, travel trailers, tent campers and a one-day RV auction, as well as traditional new models.

New RVs and related products will be exhibited in the domed stadium, while used dealer-owned vehicles will be on sale in a tent and display area outside.

The public auction, for dealer-owned RVs only, will be Oct. 14.

Lotus settles 2 cases, ends tie to DeLorean probe

By Daniel Ward
STAFF CORRESPONDENT

LONDON — Group Lotus has reached out-of-court settlements with both the receiver for the failed DeLorean Motor Car Co. and British tax authorities.

Meanwhile, Fred Bushell, former Lotus chairman and co-owner of the unrelated Lotus Formula One racing team, has been arrested on fraud charges stemming from the handling of money used to finance John DeLorean's sports-car project.

Payment of the "undisclosed sums" removes Group Lotus from the seven-year investigation to recover $17.67 million that disappeared during the development of the stainless steel sports car.

Group Lotus said last week it had "reached an out-of-court settlement with the joint executors of DSQ Property Services Limited (formerly DeLorean Motor Car Co.) in the present action claiming damages and interest.

Under the settlement, Lotus has paid a sum of money without any admission of liability and all existing and future claims of DSQ against Lotus have been dropped."

The statement made no mention of an out-of-court settlement with the tax authorities.

The company admitted a payment had been made to Inland Revenue — Britain's equivalent of the U.S. Internal Revenue Service — to settle a 1984 protective tax assessment for £85 million ($113.4 million).

British authorities levied the assessment when they didn't get the answers needed to track down the missing funds.

In both cases, Lotus made payments subject to confidentiality.

It is unlikely that the amount paid will be disclosed because Lotus' accounts are consolidated with General Motors'.

Lotus has been faced with heavy legal expenses in the DeLorean case despite the fact that the company has never been directly implicated in the government investigation.

Lotus founder Colin Chapman, who died in 1982 and whose company was subsequently sold to GM in 1986, worked with DeLorean in developing the sports car.

A full accounting of how the government's development funds were spent has never been provided. Investigators had hoped Lotus would provide leads.

The "appropriate settlement," as it was described by Lotus, also ends legal action initiated by the bankruptcy receiver seeking to recover funds for investors in DeLorean's defunct company.

The amount paid by Lotus will be deducted from a $54 million claim DSQ obtained against DeLorean last year.

DSQ won a summary judgment to collect that money in a U.S. court in May, but the judge stayed enforcement of the judgement pending DeLorean's appeal, which is expected to be heard in August.

Bushell, 61, Lotus' former chairman, was arrested and taken to a Belfast court by the Royal Ulster Constabulary's fraud squad where he denied charges of conspiracy with DeLorean and Chapman to defraud DeLorean Motor of £3.5 million ($5.7 million).

Big 3 third quarter car production

SHUTDOWN

FROM PAGE 3

States from dipping to the lows of the recession in the early 1980s. Those plants are set to assemble about 286,000 cars, up 80,000 from 1988.

The industry is scheduled to build about 1.47 million cars in the third quarter, slightly less than the 1.49 million built in the third quarter last year. The low point of the decade was 1.26 million in 1982.

The Big 3 are slated to build just under 1.18 million cars, about 100,000 less than they produced in the third quarter a year ago. The numbers do not include vehicles that will be built at their joint-venture operations.

Analysts predict that if the new incentives don't clear out most of the 1.8 million Big 3-built cars in inventory, the automakers could trim production schedules further later this month or in August.

Chrysler Motors plans to build fewer cars in the third quarter than in any third quarter for more than a decade. Excluding its share from its joint-venture with Mitsubishi, Chrysler plans to build 181,000 cars in the quarter. Chrysler recently extended shutdown time at its plant Sterling Heights, Mich., which builds the Plymouth Sundance and Dodge Shadow.

Industry analysts predict Chrysler may cut production of its Dodge Omni and Plymouth Horizon late in the third quarter or early in the fourth quarter due to high inventories. The Detroit plant that presently builds those models is scheduled for only a five-day model changeover.

General Motors, excluding its New United Motor Manufacturing Inc. venture with Toyota, is scheduled to build 623,000 cars in the third quarter. That would be its lowest level in more than a decade and nearly 100,000 units less than it built in the 1988 third quarter. Adding in GM's share of NUMMI production boosts GM's third-quarter output above the 1987 total, which was the lowest in this decade.

GM recently extended the already-long shutdowns at car plants in: Arlington, Texas; Bowling Green, Ky.; Flint, Mich.; Janesville, Wis.; Lansing, Mich.; Linden, N.J.; and Wilmington, Del. Analysts predict further cuts in GM's schedule will be announced late this month or in August, depending on the success of the incentive program announced last week.

Ford Motor Co. trimmed its second-quarter production by closing some plants. For the first time since the economic recovery started six years ago, Ford closed plants in late May and in June due to climbing inventories. So far, Ford has maintained a strong third-quarter schedule, though analysts predict it also will be forced to cut some production.

Excluding its share of output from Mazda's Flat Rock, Mich., plant, Ford plans to build 376,000 cars in the third quarter, about 16,000 more than it built in the year-ago quarter.

INVENTORY

FROM PAGE 1

lower-volume models, such as Civic station wagons, Civic CRX and Prelude. Honda does not consider the increase in inventories alarming, noting the June 1 figure was calculated on a high May sales rate and the July 1 figure on a lower June sales rate as Honda ended a sales incentive program.

Honda declined to discuss any changes in how its internal inventory is calculated. But dealers privately note that in previous years, the way car allocations were made encouraged dealers to report cars as "sold" as soon as they arrived at dealerships, a practice that has since largely disappeared.

Current Honda inventory figures may more accurately reflect reality than old reports of often single-digit days' supply, dealers suggest.

"We have more cars than I can sell," admitted Gregory McCollum, vice president of Bob Benson Honda in Petaluma, Calif. "It is definitely not the same market as a year ago."

Ray Cooper, general sales manager of Metro Honda in Thornton, Calif., said he has plenty of cars across the board.

"Business is off a little bit. It's not like last year," he said.

Across the entire U.S. market, robust June sales in 1988 whittled down the July 1 domestic-import inventory to 2,490,542 unsold cars, a 61-day supply, 12 days fewer than this year's inventory.

This year's July 1 stockpile of U.S.-built cars rose only 3,139 units over June to 1,847,283. But because of June's sluggish sales pace, that represented a 75-day supply. The figures were 67 days on June 1, and 60 days on July 1, 1988.

Import-car inventories also edged up marginally in June. The July 1 total was 663,418 units, up 1,873 from June 1. The days-supply figure was 67, compared to 66 on June 1 and 58 on July 1, 1988.

Each of the domestic Big 3 reported higher inventories and days' supplies on July 1.

Combined stocks of Chrysler Motors' U.S.-built cars and captive imports climbed to 300,372, equal to 87 days, up from 76 days on June 1.

Both General Motors and Ford Motor Co. reported combined domestic-import stocks equivalent to 80-day supplies on July 1.

GM's combined car inventories rose to 1,001,373. That was equal to 80 days, compared to 72 days on June 1.

Ford's combined car stocks totaled 598,000, equal to an 80-day supply, up from last month's 71.

Automotive News Staff Reporter Jesse Snyder in Los Angeles contributed to this report.

New Kelsey-Hayes plant produces millionth ABS

ROMULUS, Mich. — Kelsey-Hayes Co., manufacturer of anti-lock braking systems for passenger vehicles, reported that production of second-generation rear-wheel anti-lock braking systems at its new Fenton, Mich., plant has topped one million.

Production at Fenton began in 1988, and the plant is scheduled to begin making four-wheel anti-lock braking systems later this year. Kelsey-Hayes also makes anti-lock braking systems at a plant in Brighton, Mich.

INCENTIVES

FROM PAGE 1

in lieu of a carryover allowance. Earlier this year, GM told dealers it would not pay the traditional carryover allowance — 5 percent of the list price of the vehicle and factory-installed accessories on vehicles left in inventory when the new model year started. Dealers in recent years have been forced to forfeit part or all of the allowance on some vehicles to pay for incentives.

This year, dealers can elect not to participate in the dealer incentive program. Instead, they will receive $150 on most vehicles left in their inventories on Sept. 28. Dealers say that payment is so minimal that few will pass up the incentive plan.

Under the dealer incentive program, dealers are assigned a sales quota. They get nothing for the first third of the quota, $300 per vehicle for 34-66 percent, $500 per vehicle for 67-100 percent and $1,000 per sale in excess of 100 percent. In addition, GM will advance dealers half of the money they would receive if they meet their sales target.

The following programs have been announced:

ALFA ROMEO offers dealer rebates of $2,000 on Milano sedans and $1,000 on Spyders, for each sale or lease of a 1988 or 1989 model and an extra $6,000 for every third Milano sold, or $3,000 for every third Spyder. The program ends Aug. 31.

AUDI extended consumer and dealer incentives until July 31. Dealers who meet their sales goals for 100 and 200 front-wheel-drive models will receive $3,000 for every car they sell during July. Audi is giving consumers $2,000 on 80 Quattro, $2,500 on 90 and 100 Quattro and $3,000 on 200 Turbo Quattro.

BMW offers reduced interest rates on 1988 and 1989 7-series models through Aug. 31. It had been offering special leasing rates on the 7-series, but the new program marks the first retail financing program for the 1989 models.

BUICK offers a rebate up to $1,500 for buyers of Skylark and Century models with uplevel option packages.

On virtually all GM models except Cadillacs, buyers will have a choice between a rebate and cut-rate loans of 2.9 percent for 24 months, 5.9 percent for 36 months, 6.9 percent for 48 months and 10.9 percent for 60 months. The 60-month rate was raised to 10.9 percent from 9.9.

There is no dealer financial participation.

Buick's rebates are $500 on Skyhawk, $500 to $1,000 on full-sized Estate Wagon, and $500 to $1,500 on Skylark, Century, Regal, LeSabre and Electra/Park Avenue (except Ultra).

CHEVROLET doubled rebates on its 1990 Geo Prizm and placed a $400 rebate on its Geo Tracker; increased rebates on Caprice ($750 to $1,000) but cut rebates on Beretta ($600 from $1,000) and Camaro ($500 from $1,000).

The rebates are: $400 on Sprint/Geo Metro, Geo Spectrum and Geo Tracker; $500 on Camaro, Celebrity, S-10 pickup EL models, C/K full-sized pickup and cab chassis (with no low financing alternative), Astro and Chevy Van; $600 on Cavalier, Beretta and R/V full-sized pickup and cab chassis (with no low financing alternative); $750 on S-10 pickup and cab chassis (excluding EL) and S-10 Blazer; $800 on Geo Prizm and 1988 Nova; $1,000 on Corsica and Caprice.

> "We don't anticipate consumers waiting. The biggest availability of colors, options and models out there will be the earliest ones."

> — BUD MOORE

GMC TRUCK indefinitely extended incentives, offering rebates or low financing on many models.

Rebates offered as an alternative to low financing are: $500 on Sierra full-sized pickups and cab/chassis (with no low financing alternative); S-15 special price-leader pickups, Safari passenger and cargo vans, Rally passenger and Vandura cargo vans; $600 on R/V pickups (with no low financing alternative); $750 on S-15 pickups and cab/chassis models (excluding leader) and S-15 Jimmy.

GMC Truck and Chevrolet are offering a free automatic transmission alternative to the $500 rebate on the Sierra full-sized pickup.

HONDA has a dealer program which ends Aug. 31 and offers up to $500 on 1989 Preludes and up to $350 on four-door 1989 Accords.

HYUNDAI revised combined consumer rebate and dealer cash program and extended incentives until Sept. 5.

The new program continues a previous dealer cash program on 1989 Sonata sales and leases. The non-retroactive dealer payments are $300 per unit for the first 10 sales in the period, $500 each on units 11 to 20 and $800 each for units over 21.

Direct consumer rebates on 1988 and 1989 Excels — with no dealer contribution — are $300 on three-door base L, $500 on four-door L, $500 on GL and $1,000 on GLS, GS and SE.

Dealers will receive bonus payments based on the percentage of sales quota reached. For 30 to 99.9 percent of quota, payment is $300 per Excel for each unit over the initial level. Reaching or exceeding objective is worth $600 on all units over quota.

MAZDA extended combination consumer rebate and dealer cash incentive program through Aug. 2.

Consumer rebates are: $750 on 626, MX-6 and pickups; $200 on three-door 323; $600 on four-door 323.

Mazda also is offering dealer cash payments on 929, 626 and MX-6. The 929 incentive is $1,000 per unit; payments on the 626 and MX-6 are on a sliding scale based on attainment of quotas.

MERCEDES-BENZ continues to offer special leasing rates on its 190 models.

MITSUBISHI offers dealer cash payments of up to $1,750 on retail sales or leases of most models except Eclipse until July 31.

Mitsubishi will pay dealers $500 for any retail sale or lease of 1989 Galant or 1988 or 1989 Precis, Sigma, Starion, Montero or Wagon during the period. The bonus is $1,000 on any 1988 or 1989 two-door Montero sale or lease.

On 1988 and 1989 Mirage sales or leases, the payment increases with volume. Cash payments are: $250 each for first six units; $500, seventh through 12th; $750, 13th through 20th; $1,000, 21st through 30th; $1,250, all additional Mirages. Payments are not retroactive. The bonus is $500 on all 1988 and 1989 three-door Mirages sold or leased.

For 1988 and 1989 pickups and Vans, payment is also based on volume. Dealers get $500 per unit for the first 12, $1,000 each for units 13-25 and $1,500 each above that.

NISSAN is offering dealer incentives ending Sept. 5 on 1988 and 1989 Sentras, Hardbody pickups and Pathfinders. Awards per vehicle range from $100 to $2,000.

For Sentra, a dealer gets $100 per unit for 0 to 33.9 percent of quota; $800, 34 to 99.9 percent; $1,500, 100 percent or more.

For pickups or Pathfinders, the cash bonus is $100, $1,000 and $2,000 in the same steps.

OLDSMOBILE increased rebates on Cutlass Calais to $1,250 from $1,000; other than that, the program is a carryover.

Olds rebates are: $1,000 on Cutlass Ciera, 88 and Custom Cruiser; and $1,500 on Cutlass Supreme, 98 and Toronado.

Dealers are required to contribute on some of the incentives. On Calais, the dealer must pay $250 on the $1,250 incentive. If the dealer chooses not to participate financially, the rebate on the Calais is $750. On the Ciera, the dealer must pay $250 of the $1,000; otherwise the Ciera incentive is $500. The dealer payment is $250 on Supreme, otherwise $1,000.

PEUGEOT factory-to-dealer rebates run through Sept. 16. They are: $2,000 on 405-DL; $1,500, 405-S; $1,000, 405-Mi 16; $1,000, 1989 505 wagon.

Peugeot also lengthened its optional factory-sponsored extended service contract to 6 years/60,000 miles from 5/50.

PONTIAC rebates are: $1,250 on Grand Prix; $1,250, Grand Am; $1,000, 6000, Sunbird, Bonneville, Firebird, Safari wagon and LeMans GSE and SE; $700 on LeMans LE and Value Leader.

According to dealers, Pontiacs in the rebate program have a $250 dealer financial participation cost except for LeMans, which has a $150 fee. If the dealer decides not to participate, the consumer receives the rebate minus the dealer participation cost, dealers said.

STERLING continues to offer factory rebates and low-interest financing on 1988 models and special lease rates on 1989 models.

In August, Sterling customers will have three choices: low-interest financing or special lease rates on 1989s, or a dealer-cash offer to be applied to the purchase price at the dealer's discretion.

For a 66-month, no-money-down lease, payments are $336 to $448 per month, depending on model.

With a 10 percent down payment on a 66-month lease, the monthly rates are $292 to $391. Payments increase on shorter-term leases.

Low-interest financing on the 1989s will include a 24-month loan at 4.9 percent; 36 or 48 months at 5.9 percent; or 60 months at [illegible].9.

Cash rebates to dealers will be $1,500 on 827S and $2,750 on SL, SLi or LE.

SUBARU fine-tuned rebates, which run through Sept. [illegible] Incentives on Subaru's GL and DL three-door and four-door models and the GL 10 wagon remain at $2,000. The $2,000 rebate was cut to $1,500 on GL and DL wagon models.

A $300 rebate on the Justy DL was discontinued, while the $500 rebate on the Justy GL was doubled to $1,000. The $1,000 rebate also was applied to the Justy RS and the Justy with continuously variable transmission. The rebate on the XT sport model was doubled to $3,000.

Whether the rebate goes directly to the customer or to the dealer varies by sales region.

SUZUKI has a three-part cash program on selected Sidekicks and Swifts until Aug. 2. Dealers get $1,000 each on Swifts with automatic transmissions and uplevel Sidekick sport-utilities except Sidekick JS.

TOYOTA: Program runs until Sept. 5 and combines dealer cash payments of up to $2,500 and a sales manager trip contest on pickups, vans, 4Runners, Camrys, Corollas, Supras and MR2s.

Cargo and panel vans have three dealer cash payments based on volume. They are: one to three units, $1,250 each; four to six, $1,500 each; seven or more, is $2,500 per unit for all units, retroactive to the first six.

For 1988 and 1989 pickups and 4Runners, the dealer payment is based on percentage of quota achieved. For 0 to 34.9 percent, $200 per unit; 35 to 84.9 percent, $400 per unit; 85 to 99.9 percent, $1,000 per unit; and $1,200 for meeting or exceeding quota. There is a $400 bonus on all base 4x2 and 4x4 models and a $200-per-unit bonus on each sale before Aug. 2 if the July sales objective is reached.

On 1988 and 1989 Camrys and Corollas, the program uses different percentage groupings. For 0 to 33.9 percent of objective, the payment is $100 per car; 34 to 66.9 percent, $300 per car; 67 to 100 percent, $600; and for exceeding quota, $800 per car.

Toyota will pay dealers a flat $2,000 on all 1988 and 1989 Supras and $1,000 on 1988 and 1989 MR2s sold until Sept. 5.

VOLKSWAGEN: Cash rebates through July 31 are: $200 on Wolfsburg Edition Fox GL; $500 on Wolfsburg Edition Golf GL; $750 on 1988 and 1989 GTI 16V, Wolfsburg Edition Cabriolet and Wolfsburg Edition Jetta GL; $1,000 on 1988 and 1989 Jetta GLI and 1989 Wolfsburg Edition Vanagon GL; $1,500 on Wolfsburg Edition Jetta GLI; and $2,000 on 1989 and 1988 Vanagon camper. No dealer financial participation is required.

Dealers receive $500 on every Vanagon camper sold during July.

Automotive News Staff Reporters Jim Henry, Dutch Mandel and Jesse Snyder contributed to this report.

Cars, trucks post sales gain in early July

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

Early-July sales of U.S.-built cars and light trucks climbed 8.93 percent above last year's lackluster period, which had followed the second best 10-day period of 1988.

Both car and truck sales performance improved in the July 1-10 period. Only Chrysler Motors and Honda suffered sales declines. Chrysler's light-truck increase could not make up for lower car deliveries. And domestic Hondas fell by nearly a third.

The 10-day upswing represented "a little bit of bounce back in early July after very bad late June sales," said Wendy Beale Needham, auto analyst at Smith Barney, Harris, Upham & Co. in New York.

She said good weather and shopping on the July 4 holiday weekend probably helped boost sales. Showroom traffic may have increased because some incentives, particularly those from General Motors, were due to expire July 10.

In the period, 249,298 domestic cars and light trucks were sold, an increase of 20,428 over last year's 228,870.

GM and Ford Motor Co. both reported 11 to 12 percent increases in combined car and light-truck sales. Nissan's domestically assembled car and truck deliveries soared 98.43 percent above last year's. Chrysler Motors' combined sales slipped 2.08 percent below the equivalent period in 1988.

Deliveries of U.S.-built cars for the July 1-10 period totaled 155,297, up 9.28 percent from last year's 142,110.

Light-truck sales rose 8.35 percent. The four light-truck makers sold 94,001 units, up from 86,760 last year. Nissan's light-truck deliveries more than doubled the year-ago total.

Boosted by hefty Lincoln gains, Ford delivered 16.95 percent more cars than it did a year ago.

GM sold 11.34 percent more cars in this year's early-July period. Buick had the biggest gain; Chevrolet and Pontiac were up.

Chrysler reported a 5.76 percent decline, although Plymouth posted a 3.74 percent increase.

Among the transplants, only Honda reported a decline: 31.83 percent. Toyota U.S.-built Camry sales more than doubled in the first 10 days of July. Nissan reported a hefty 86.90 percent gain in domestic Sentra deliveries. Mazda's MX-6 sales rose 47.33 percent. Mitsubishi, which was not making cars here last year, sold 716 Eclipses in the first 10 days of July.

All four U.S. truck makers reported early-July increases. Nissan's transplant light-truck sales doubled. GM boosted its light-truck deliveries 13.16 percent, and Ford sold 3.56 percent more light trucks than it did last year.

COURT

FROM PAGE 3

The petition also notes that eight federal courts and five state supreme courts have addressed the issue of whether compliance with federal law exempts automakers from liability in design defect cases and that the situation is "utterly unclear." For example, a jury found that the placement of a gas tank between the rear bumper and the axle was negligent even though it met federal safety standard 301. Another jury found a side door design inadequate even though it met standard 214.

The lawyers maintain that those and the air-bag cases need clarification by the Supreme Court.

Air bag suits: GM wins one, settles one

By Helen Kahn
SENIOR CORRESPONDENT

WASHINGTON — In two separate cases charging that General Motors cars were defective because they weren't equiped with air bags, the automaker won one on appeal and settled the other out of court.

A three-judge U.S. Court of Appeals for the 11th Circuit in Atlanta upheld a Florida court decision in GM's favor saying that the Motor Vehicle Safety Act of 1966 "implies" federal pre-emption of some liability claims in state courts.

The ruling applies not only to GM in the Taylor vs. GM case, but also to a joined case of Evans vs. American Honda. In that case, the plaintiff charged that a 1977 Accord was not crashworthy because it, too, lacked an air bag.

While the appellate court found no express federal pre-emption in the 1966 law, it found implied pre-emption, saying that a 1974 federal safety standard adopted under the 1966 law provided manufacturers a choice of equipping their vehicles with seat belts or passive restraints such as air bags.

If a state court suit were to require automakers to install passive restraints, it would eliminate their option, thereby "frustrating the federal regulatory scheme," the court said.

Meanwhile, GM reached a confidential, out-of-court settlement in a similar case, Ritt vs. GM, in the U.S. Court of Appeals for the Seventh Circuit in Chicago.

That court requested the government's view on whether the 1966 safety law and federal standard 208, which provides for passenger restraints, were meant to pre-empt state auto design litigation.

NHTSA's position, forwarded by the Justice Department, held that mere compliance with the minimum federal safety standard is not a shield against litigation and a federal policy of "uniformity" does not make auto companies immune from damages under common law.

But the government confined its view on the issue to the 1984 version of standard 208, which requires the phase-in of passive restraints by 1990. It took no position on vehicles made before that standard was issued.

GM settled the case. It involved a 1980 Pontiac Sunbird in which the driver was paralyzed in an accident. The driver's guardian sued on grounds the car was uncrashworthy because it lacked passive restraints.

Designers eye the classics
The Big 3's leading auto designers set aside their corporate competition and relaxed for a few moments at the Eyes on the Classics concours d'elegance in Grosse Pointe Farms, Mich. Standing, from left, are: John J. Telnack Jr., Ford Motor Co.; Charles M. Jordan, General Motors; and Thomas C. Gale, Chrysler Motors. Cadillac General Manager John O. Grettenberger presented an award for best expression of Cadillac to L.C. Harriman for his 1941 Cadillac 60-S sedan. Cadillac was the honored marque of the event.

EPA questions tax loophole used by Ford [illegible] Chrysler

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The EPA has asked the Internal Revenue Service to examine its method of taxing gas guzzlers based on sales projections rather than on actual sales, according to Thomas M. Ball, chief of the EPA's certification branch.

Following the disclosure last week that loopholes in the gas-guzzler law allowed Ford Motor Co. to avoid nearly $200 million in taxes and Chrysler Motors to avoid about $29 million, the EPA is studying alternative ways to determine gas guzzlers. It is also investigating to see if other manufacturers are using loopholes, Ball said.

Ford and Chrysler used different ways to avoid the tax.

If the fuel-economy rating of a category of cars is below 22.5 mpg, the maker is penalized $500 to $3,850 per car. For Ford and Chrysler, the penalty probably would have been $500, Ball said.

Gas guzzlers are determined in classes by the projected best-selling model of a category of cars.

Ford counted its 1986 Thunderbird V-8 as its best-selling model [illegible]e EPA fuel economy category with the Mercury Cougar, Ford Crown Victoria, Mercury Grand Marquis and Lincoln Town Car, Continental and Mark VII.

By breaking the cars into subcategories — based on things like axle ratio and engine controls — Ford turned the more efficient Thunderbird into the class' best seller.

Chrysler got its rating by projecting higher sales than it actually achieved for the highest-economy version of its 5.2-liter V-8-powered 1988 Chrysler Fifth Avenue, Dodge Diplomat and Plymouth Gran Fury models.

"We discussed the situation with Ford and they agreed not to do it again," Ball said.

Donald R. Buist, director of Ford's automotive emissions and fuel economy office, said, "Ford Motor Co. has done nothing inconsistent with the law."

A Chrysler spokesman said, "We were in strict compliance with the law. Sales projections are based on our best estimate at the time. It didn't work out."

CAFE

FROM PAGE 2

approved its use of $4.03 million in credits accumulated during the three years prior to 1987, when the company exceeded CAFE.

Porsche Cars North America settled liabilities recently for both the 1986 and 1987 model years, paying penalties of $323,440 and $948,480, respectively.

Porsche's CAFE in 1987 was 25.4 mpg and it anticipates it will again pay a fine for the 1988 model year because its CAFE dropped to 24.9 mpg. But because of weaker sales, it anticipates a fine of about $887,000, a spokesman said. Peugeot's CAFE was only 24.1 mpg in 1987 and the automaker paid a $767,600 penalty. Peugeot Motors of America's civil liability could be equally high in 1988 when the marketing arms expects its CAFE will be 23.5 mpg.

"CAFE is just something that we have to bear with, it's just the cost of doing business," a Peugeot spokeswoman said.

Because of Peugeot's small sales and already strained U.S. finances, paying a CAFE fine significantly impacts the company's bottom line, she said. "To others (carmakers) selling more cars, it's a drop in the bucket. For us there's just no way around it right now," she said.

Range Rover vehicles are classified as light trucks, and are subject to a lower CAFE standard. The light-truck CAFE for 1987 was 19.5 mpg and Range-Rover's average was 16.4 mpg, subjecting the manufacturer to a $272,955 fine.

Range Rover does not expect to meet the 1988 light-truck CAFE of 19.5 mpg or the 19 mpg level set for 1989.

"We aren't contesting it, or arguing the figures," a spokeswoman said.

WARRANTY

FROM PAGE 3

position — having to handle very angry customers," Downey said last week. "There is virtually zero chance there will be sufficient assets to pay all the creditors." He said dealers and customers are among the creditors least likely to be paid.

"My reputation is being beat to pieces over this, and it's not my fault," said Archie Huebner, a Chevrolet-Oldsmobile-Geo dealer in Carrollton, Ohio.

Heubner said he sold about 800 Thermo-Care warranties in 1987-88. He said he is owed $19,000 to $20,000 for warranty work that the administrator of the Thermo-Care warranties has refused to pay, citing the dispute with Ravinsky.

Jeffrey Fine, general manager of Peugeot of Westfield in New Jersey, said he has been refused reimbursement for work performed on cars owned by more than a dozen of his Thermo-Care Warranty customers. Three customers sued the dealership for fraud when they were told that repairs weren't covered, he said.

At the center of the case is Ravinsky, principal owner of Guardall Warranty Corp. in Mississauga, Ontario, and related businesses that filed for bankruptcy in March after the Ontario government closed them and froze their assets.

Ravinsky is also president and director of the company best known as Thermo-Guard Warranty Co., which is chartered in Fort Lauderdale, Fla. Ravinsky legally changed the name of Thermo-Guard Warranty Co. to SJR Warranty Co. soon after he bought out his partner in 1986. The company sold service contracts in the United States under the Thermo-Care name. In Canada, warranties were sold under the Guardall name.

An affidavit filed by the bankruptcy trustee said Ravinsky's Canadian companies sold an average of 2,000 extended service contracts a month from January to May 1987 alone.

Downey said customers paid $700 to $800 Canadian ($588-$672 U.S.) per warranty, and the selling dealers kept $300 to $400 ($252-$336 U.S.). Of the remainder, about 62 percent was supposed to be kept in trust, with $10 to go for insurance premiums for large claims.

But, according to Downey's affidavit, Ravinsky's companies failed to maintain sufficient reserves to pay claims, as they were obliged to do under Canadian law. He said the companies sometimes failed to buy insurance.

On April 5, Downey was put in charge of Guardall Financial Services Corp. and its five subsidiaries.

Downey then sought to force Ravinsky into bankruptcy in U.S. Bankruptcy Court in Miami, with an eye toward seizing Ravinsky's personal assets, notably the yacht that Ravinsky had tried to sell before the corporate bankruptcy was declared.

On July 5, Ravinsky settled the case and avoided being forced into personal bankruptcy by agreeing to hand over his personal and corporate assets.

Downey refused to divulge the financial terms of the settlement except to say it was "significant in monetary terms."

Ravinsky took over Thermo-Guard Warranty Co. in 1986 after buying out his former partner, Hap Hirsh.

> **Dealers are in a very difficult position — having to handle very angry customers. There is virtually zero chance there will be sufficient assets to pay all the creditors.**
>
> **Bankruptcy Trustee**

Hirsh of Deerfield Beach, Fla., founded the warranty business about two years earlier as part of Thermo-Guard Inc., which sells aftermarket sealant and protectant chemicals to dealers. Hirsh recently bought out his partner, Lou Small, and is now sole owner of the chemicals company.

Hirsh said he hasn't been associated with the warranty business since he sold it to Ravinsky.

Ravinsky expanded the business into Canada under the Guardall name and later moved its headquarters to Canada.

But Hirsh and Ravinsky shared the same office building in Florida until last year, and both organizations were represented by the same salespeople in the field in some markets. Hirsh said the Ravinsky bankruptcy has had a bad effect on the chemicals business, even though the two businesses were under separate ownership.

Under Hirsh and then under Ravinsky, 1,000 to 1,500 U.S. dealers have sold Thermo-Care warranties, at an average rate of about 1,300 warranties per month, according to Gerald Zipper, chairman of Dealer Service Network.

Dealer Service Network administered the service contracts for Ravinsky, both in Canada and the United States. It continues to honor valid Thermo-Care warranties, even though Thermo-Guard Warranty Co. is out of business, Zipper said.

Zipper said Ravinsky's companies virtually ceased selling service contracts in the United States after Dealer Service Network terminated its contract with Ravinsky last October. Sales ceased completely following the Canadian bankruptcy in March, he said.

Zipper said relatively few dealers, "no more than 50," have been denied claims because of the conflict between Dealer Service Network and Ravinsky.

Dealer Service Network is now suing Ravinsky in the New York Supreme Court, alleging that Ravinsky's companies accepted money for service contracts without forwarding the money to Dealer Service Network to maintain sufficient trust fund reserves or insurance.

Ravinsky countersued Dealer Service Network for more than $5.5 million in damages. He alleged that the warranty administrator breached its contract and withheld the money he needed to pay claims, making it impossible for him to meet his obligations.

Ravinsky did not return messages on his home answering machine. His attorney in New York, Susan Rosenthal, refused to discuss any aspect of the case. His attorney in Florida, James Paul, didn't return phone calls.

OBITUARIES

Charles E. Vincel

Ford to idle two Ranger truck plants

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

A softening demand for compact pickup trucks will cause Ford Motor Co. to idle two plants that assemble the popular Ford Ranger model, beginning July 24.

Ford said sales of compact pickups have declined more this year than the truck market as a whole. Ford will shut down its Louisville, Ky., and Twin Cities, Minn., plants resulting in a weekly production loss of about 11,900 units during the first week and 4,300 cars the second.

The Louisville plant builds the Ranger and Bronco II and will be idle for a week. The Twin Cities plant, which produces the Ranger and F-series trucks, will be shut down for two weeks.

Meanwhile, last week's targeted domestic truck production remained low, with several plants closed for model changeover and vacation.

Output of 40,061 was 29.35 percent more than the previous holiday week's 30,972 and 0.86 percent above the year-ago week's 39,721.

Car production totaled 56,573 units last week, up 38.24 percent from the previous week's 40,925 but 39.81 percent below the year-ago week's 93,984.

Last week's estimated car build was split as follows: General Motors, 62.40 percent; Honda of America, 12.89 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 7.67 percent; Toyota Motor Manufacturing U.S.A., 6.22 percent; New United Motor Manufacturing Inc., 4.33 percent; Chrysler Motors, 3.54 percent; and Diamond-Star Motors, 2.95 percent.

Ford and Nissan Motor Manufacturing Co. plants are expected to resume production today after being idle for vacation.

Mazda, Honda, and Diamond-Star Motors resumed domestic production last week.

GM shut down its Buick City plant in Flint, Mich., for model changeover last Thursday. The plant is expected to reopen Aug. 7.

These GM plants remain closed for changeover: Detroit-Hamtramck; Orion Township, Mich.; Wentzville, Mo.; Flint, Mich.; Lordstown, Ohio; and the Reatta Craft Centre in Lansing, Mich.

Remaining idle for model changeover at Chrysler are: Toledo, Ohio; St. Louis; Belvidere, Ill.; Newark, Del.; and Sterling Heights, Mich., plants.

Canada plans 50 percent hike

Canadian auto production was scheduled at 12,800 units last week, up 50.59 percent over the previous holiday week's 8,500, and 49.39 percent over the year-ago week's 8,568.

Truck output last week of 6,533 dipped 45.49 percent from the prior week's 11,919 but rose 15.73 percent over the year-ago week's 5,645.

Ford Motor Co. reopened its plants today after a two week vacation shutdown.

Car orders simplified

Chrysler analyzes sales to help dealers

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

WARREN, Mich. — In the auto industry's latest and most ambitious effort to simplify vehicle ordering, Chrysler Motors has launched a Customer Preferred program on some 1990 cars.

The program kicked off nationally with 1990 Plymouth Sundance and Dodge Shadow orders and all 1990 Chrysler Motors domestic-car orders in California, except those for Jeep-Eagle Division models.

Chrysler will use computerized analysis to help dealers order specific, popularly equipped models for their individual markets, thereby keeping the best-selling models continuously in stock.

It will be expanded nationally to more models in the 1991 model year and will include all Chrysler vehicles within two to three years, according to Michael E. Dowd, Chrysler Motors' manager of sales inventory management.

The program will also become part of the $100 million satellite system under which every Chrysler dealership is being equipped with a two-way communications dish.

Domestic automakers and their dealers have long wrestled with the headaches and costs in the complex field of optional equipment.

Manufacturers offer big discounts to persuade dealers and customers to order special equip-

Chrysler trimming costs, expects '90 sales to fall

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — Chrysler Motors is battening down the hatches and readying a cost-cutting campaign as it predicts that U.S. vehicle sales will drop to 14.2 million units in the 1990 calendar year.

Chrysler Motors Chairman Bennett E. Bidwell said in an interview that Chrysler internally is forecasting U.S. sales of 9.4 million cars and 4.8 million trucks in 1990.

Chrysler is predicting that U.S. car and truck sales in the second half of 1989 will be lower than in the first half. The company had been predicting 15 million for the year; now it has reduced its second-half forecast to an annual rate of 14.5 to 14.7 million sales. First-half sales for the industry were down 6.55 percent from 1988 and the annual rate was 14.9 million in the first six months of 1989.

Ford Motor Co. earlier this month revised its 1989 sales forecast to 14.7 million units, down 300,000 from its estimate at the start of the year.

AUTOMOTIVE NEWS/JOE WILSSENS

Chrysler's Bennett E. Bidwell: "In my judgment, we've been in a mild recession in the auto industry for at least a year."

"Everybody says there is a recession coming. In my judgment, we've been in a mild recession in the auto industry for at least a year," Bidwell said.

He cited a drop from a seasonally adjusted annual selling rate of 16.5 million units in the first quarter of 1988 to 15.5 million units in the fourth quarter of 1988 and 14.6 million units in the first quarter of 1989.

Bidwell said that without the "artificial respiration" of retail incentives, selling rates would be 500,000 to one million units lower.

Big 3 lobbies, gets break in Bush air plan

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

Smith

Greenwald

Gilmour

WASHINGTON — Roger Smith and other top Big 3 executives lobbied President Bush's chief of staff last week in a last-minute effort to press their concerns over clean air legislation.

That visit and other contacts with the administration paid off somewhat with the industry winning a longer phase-in period for tighter 1993 tailpipe emission standards for cars and light trucks. And light-truck standards will not be as strict as those initially outlined in Bush's draft proposal announced last month.

But the industry was still disappointed with the light-truck levels and provisions requiring them to sell alternative fuel vehicles.

Joining the General Motors chairman in the meeting with John H. Sununu were Chrysler Corp. Vice Chairman Gerald Greenwald and Ford Motor Co. Executive Vice President D. Allan Gilmour. They met last Wednesday to talk about the legislation that was unveiled Friday.

A joint statement released by the automakers said, "The purpose of the meeting was to reaffirm support for legislation that can lead to a proper balance between effectiveness in cleaning the air and the economics involved, such as international competitiveness."

The Big 3 was worried specifically about tighter 1993 tailpipe emission standards that

Ford kills modular truck plan for '90s

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co.'s ambitious program to develop composite and modular trucks has been killed.

"It's dead. The PN38 program is dead, kaput, defunct," a source familiar with the program said. "It has not been postponed."

The death knell was sounded because of Ford's capital spending cuts and low profitability projections, combined with the cost of the new technology and concern over fuel-economy standards.

The PN38 program would have created a modular truck platform on which to build plastic vans, pickups and sport-utilities beginning in 1993 and driving the company into the next century.

Officially, a Ford spokesman said no decision had been made on PN38's fate. But he said questions are being raised industry-wide surrounding future product programs.

Questions about the PN38 project's health were raised last spring with the abrupt departure of its overseer. Thomas S. Moore, executive engineer for vehicle engineering in Ford's truck operations, left the company tojoin Chrysler Motors as general manager of New Liberty Vehicle Engineering. Moore, 48, was a 20-year Ford veteran.

By canceling PN38, Alexander J. Trotman, executive vice president of Ford's North American automotive operations, lops what could ultimately have cost the company $5 billion in product spending.

The PN38 project originally included replacements for

Yugo proposal favors dealers:

Bankrupt Yugo America proposes repaying its dealers half in cash and half in cars. Unsecured creditors would get nine cents on the dollar. Story on page 3.

Cadillac bucks a trend; '90 ads will stress safety

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Cadillac will roll out a national advertising campaign in the 1990 model year that emphasizes the safety aspects of its automobiles. Other GM divisions are likely to follow suit.

The campaign reverses a trend. Automakers for years have argued that safety doesn't sell automobiles and have stayed away from it in their advertising.

But test-market research conducted by Cadillac in eight cities indicates otherwise. In the cities where Cadillac heavily advertised the safety aspects of its cars, sales for November and December 1988 rose 35 percent over the year-earlier total while sales in control-group markets rose 19 percent.

Cadillac interviewed 833 buyers before and after the advertising campaign. Many of the buyers said they were more interested in safety after seeing the advertising than they had been before.

They said safety became a factor in their purchase decision. First-time Cadillac buyers were found to be the most likely to consider safety as a factor.

As a result of the positive test-market results, Cadillac will use the safety ads nationwide beginning this fall, said Elias R. Torre, Cadillac assistant general sales manager for marketing. The advertising will be combined with a comprehensive training program for dealership personnel on how to sell safety.

Torre said Cadillac was selected to do the test-market research after the medical community and GM's medical advisory committee pressured the automaker to tell the GM safety story.

The specific advertising campaign was developed by ad agency D'Arcy Masius Benton & Bowles after Cadillac ran consumer focus groups in six cities. Torre said those groups suggested Cadillac use a warm, family approach rather than a threatening angle that showed cars crashing.

The campaign themeline is "Building a safer automobile, Cadillac style," an extension of Cadillac's theme of "The only way to travel is Cadillac style."

Other ads use the slogans: "At Cadillac, we don't just surround your family with luxury. We surround them with safety." Still others say: "Cadillac proves a beautiful automobile can also be a safer automobile."

The ads note various Cadillac safety features including anti-lock brakes, side-door beams and crash-protective fuel tanks.

The promotion of safety in GM advertising comes in the first model year that the federal law requires that all cars be equipped with passive belts or air bags. As a result, the auto industry is expected to install air bags in about 3 million cars in 1990.

GM President Robert Stempel said at the automaker's press conference on automotive safety last week that GM will build 500,000 air bag-equipped cars during the 1990 model year, making the bags standard equipment on 13 models and optional on two others.

Chrysler will make air bags standard equipment on 16 models, or about 1 million cars in 1990. Ford will make air bags standard on nine models.

Two Geo models will have air bags; elsewhere, they will be on GM's higher-priced cars. Stempel said the air bags had to go on less-price-sensitive cars because of the expense. He said the system costs GM more than $500 per car.

For 1990, air bags will be standard on: all Cadillac models; Buick Reatta and Riviera; Chevrolet Camaro and Corvette; Geo Metro convertible and Storm; Oldsmobile Toronado; and Pontiac Firebird. They will be optional on the Oldsmobile 88 Royale and 98 Regency.

A recent GM study on the effectiveness of air bags showed that they reduce fatalities 18 percent when used in combination with seat belts. Stempel declined to reveal how much the prices of 1990 vehicle will be increased to cover the cost of passive restraints.

Aussie debut nears for Capri; turbo offered

By Barry Brazier
SPECIAL CORRESPONDENT

Ford Motor Co.'s answer to the Mazda Miata MX-5 is nearing its Australian debut, and details on the car to be sold next year in the United States as the Mercury Capri are beginning to trickle out.

The Australian-built convertible will bow Down Under in September, with U.S. and European launches slated for February or March.

The front-wheel-drive Capri will be based on Mazda's 323 platform and, unlike the rear-drive Miata, will offer 2 + 2 seating.

Not only does the Capri have greater seating area, it also will have a turbocharged engine option at approximately $2,000 above the projected base price of $11,500 (U.S.). Test vehicles are currently fitted with the Mazda 323-GTX 1.6-liter, 16-valve turbo engine capable of 132 horsepower and 136 pounds-feet of torque.

The base engine, which is expected to be approximately 82 hp, will be mated to either an automatic transmission or a five-speed gearbox. The Miata offers only a manual transmission.

Ford also plans to offer the five-speed with the turbo engine. The turbo model is expected to accelerate from zero-to-60 mph in about eight seconds. Turbocharged cars will be denoted by a two-tone paint trim, split at the beltline.

BARRY BRAZIER PHOTOGRAPHS

Ford of Australia's Capri goes on sale there in September. The car offers 2 + 2 seating. U.S. versions are expected early next year.

Both models will be offered in a standard Ghia trim level that includes power windows, anti-theft stereo radio system, dual electric mirrors and adjustable steering wheel. Package tray, glove box and analog gauges — including a turbo boost gauge on turbocharged models — are standard. Air conditioning will be optional at or below $1,500 ($1,080 U.S.).

The soft top can be stored under a metal panel similar in design to those in BMW 3-series and Corvette convertibles. There will also be an optional hard top for about $1,900 ($1,370 U.S.).

The car's suspension uses MacPherson-struts at all four corners. Power disc brakes and power steering are standard.

Sources say Ford is planning to build 8,000 to 9,000 vehicles for the Australian market the first year, with the United States getting 15,000 to 20,000 and Europe being allotted about 5,000.

While first-year production is set at about 30,000 units, Ford expects to build about 50,000 units annually.

All U.S.-bound Capris will have a driver's-side air bag to meet federal passive-restraint requirements.

UAW vote at Nissan called more than a one-plant test

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

NASHVILLE, Tenn. — When the 2,400 production workers at Nissan Motor Manufacturing Co. cast their votes this week on union representation, the outcome will undoubtedly set the tone for labor-management relations at all non-union transplants and suppliers.

For the UAW, dogged by years of membership decline and recent dissension among the rank-and-file, winning the Nissan election could be one of the biggest plums it has picked in this decade.

Yet labor experts predict the union will fail in its bid and the UAW itself is downplaying the vote's importance.

"I'm frankly a little tired of reading about how this election is going to make or break us," said Maxey Irwin, a private consultant and former union worker who was enlisted by the UAW as a combination spokesman and adviser. "This isn't the biggest campaign we've done, and it isn't the only one we're doing. It isn't going to determine the future of the labor movement in the United States or the South. The Nissan election is important only in so far as it relates to the people who work there."

Richard Lowe, a national labor-management consultant with the Nashville-based law firm King and Ballow who has followed the labor situation at Nissan, predicts the bid will fail. "The question isn't whether the UAW will lose or not at Nissan," Lowe said. "The question is how badly they'll get beaten. I would guess the outcome to be 60 to 40, in favor of Nissan. If it ends up any worse than that, you probably won't hear much from the UAW for a while."

But Jim Weaver, UAW international representative and coordinator for the Nissan campaign, predicts a union win — estimating a 58 percent majority of support for the drive now. Organizers spent the plant's mid-July shutdown attempting to reach 1,700 workers in a door-to-door canvassing effort. Weaver said a core of about 35 organizers finally reached 1,693 employees.

It's hard to say who is more accurate, although the usual campaign signs of active union support at the plant — UAW caps, bumper stickers and on-site rallies — are missing. Perhaps more visible as workers come and go at the operation are the bright red shirts that read, "Union Free and

Can't match GM on incentives, says Chrysler's Bidwell

By Mary Connelly and Laura Clark
AUTOMOTIVE NEWS STAFF REPORTERS

Chrysler cannot afford to match General Motors' incentive program, Chrysler Motors Chairman Bennett E. Bidwell said last week.

Chrysler estimates GM's program costs more than $1,000 per vehicle, Bidwell said, compared to Chrysler's program, which costs $700 per vehicle.

GM is offering sweetened rebates and alternative cut-rate loans on almost all its vehicles. GM also announced a cleanup program for dealers with rebates up to $1,000 per vehicle.

"It's just gone a little crazy," Bidwell said. "It would cost us a lot of money in the third quarter to match what they have done."

Bidwell said GM would have been better off offer-

'90 ads seek to erase Plymouth's stodgy image

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — Plymouth's 1990 advertising campaign is designed to overcome the brand's stodgy image and convince buyers that it offers a contemporary array of vehicles, according to Chrysler Motors Chairman Bennett E. Bidwell.

Bidwell in an interview acknowledged that the Plymouth nameplate needs to be revitalized.

"The guy I put on the 1990-model-year advertising said, 'Well, the first thing you do is change the name to Thoumply,' " quipped Bidwell, playing off the Plymouth name. "I said, 'That's a little radical.' He said the problem is that there are people who really like Plymouth but they don't want to be seen in a Plymouth."

> **"Plymouth is like that old song about Mobile, Ala. Dorothy Loudon sang it, and she sang, 'it just kind of sits there.' "**
>
> **— BIDWELL**

Bidwell said it is harder to differentiate Plymouth in the market than Chrysler, the luxury division, or Dodge, the performance division. Plymouth marketing suggests it offers contemporary value.

"Plymouth is like that old song about Mobile, Ala. Dorothy Loudon sang it, and she sang, 'it just kind of sits there.' " Bidwell said.

"We're going to spark Plymouth. We're going to have some fun with Plymouth."

"We're going to build the brand to mean that instead of you buying it *despite* the fact that it's a Plymouth, you buy it *because* it's a Plymouth," he said.

Bidwell said the perception of the brand lags behind the actual products in the showroom and that the 1990 ad campaign will work to correct that.

"Good cars will get it done," he said. "The product job is 70 to 80 percent done.

"The Plymouth line was a Reliant, a Caravelle, a Horizon, a Turismo and a Gran Fury," Bidwell said. "Now look at the brand of Plymouth today — a Voyager, a Laser, an Acclaim and a Sundance. That's a pretty competitive lineup today. There's a little pizzazz to it."

Bidwell declined to specify the 1990 Plymouth ad theme. But he said campaigns for Chrysler, Plymouth and Dodge will change for the new model year. The company is striving to find successful campaigns that can run for four to five model years.

In 1989, Plymouth used the tagline "The 9 most important words Plymouth knows: satisfy the customer, satisfy the customer, satisfy the customer."

Bidwell said the concept of satisfying the customer may remain in the new Plymouth campaign.

He also said the company will retain the Jeep campaign, which has used the theme "Only in a Jeep."The 1990 Eagle campaign will refine recently introduced 15-second television spots, he said.

The "New Spirit of Dodge" campaign will be dropped, but Bidwell said the music may be used.

GM sales outgain rivals in Europe

Vectra/Cavalier paces advance; overall market rise continues

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — General Motors, which had been losing market share in Europe since 1985, staged a turnaround in the first half of 1989.

Bolstered by demand for its new compact Opel Vectra/Vauxhall Cavalier, GM sales rose at a faster rate than Europe's five other full-range manufacturers — edging past high-flying Peugeot S.A. in the second quarter. Meanwhile, BMW's sales growth outpaced all other major European carmakers in the January-June period.

Overall, the European industry showed surprising strength in the first half of the year. New-car sales in 17 Western European countries during June increased 4.8 percent to 1,175,800 units, according to industry estimates compiled by Automotive News.

Sales in the first half climbed 6 percent over last year's record to 7,263,400, despite universal predictions of a decline in 1989.

Fiat Auto ranked first with a 15.5 percent market share. Volkswagen-Audi-Seat, Europe's sales leader the past four years, was next with 14.7 percent.

Strong June sales once again pushed back the long-anticipated drop in European sales, though most analysts still expect a second-half decline. Sales were flat in May after a 10.4 percent gain in April.

GM's surge in market share is due to the Vectra/Cavalier, introduced last fall. According to separate statistics released by GM, European sales of the model totaled 167,376 in the first five months of 1989, compared to 106,089 for the previous Ascona/Cavalier model in the same period in 1988.

According to independent industry estimates, GM's European sales rose 9.8 percent in the first half to 802,000 cars, driving market share to 11 percent from 10.7 percent in the same period last year. In June, GM sales increased 8.6 percent to 132,900, a market share of 11.3 percent.

GM's European share peaked at 11.4 percent in 1985 and declined each year since then, dipping to 10.6 percent last year. But so far this year, Opel/Vauxhall sales have outpaced overall growth in all of Europe's major markets, rising 33 percent to 50,800 units in Italy, 13.2 percent to 182,300 in the United Kingdom, 12.9 percent to 57,200 in France and 14.1 percent to 83,900 in Spain.

In West Germany, GM's six-month sales were up 7 percent to 248,700 in a market that improved only 3.2 percent. Opel's German share rose from 15.7 percent in the first half of 1988 to 16.3 percent this year, while German market shares for VW and Ford declined.

But in all of Europe, GM trailed Ford Motor Co., which finished the first half with 11.5 percent of the market. For the period, Ford sales were up 7.1 percent. The company's June increase of 16.7 percent to 141,900 was tops in Europe for the month. In the United Kingdom, Ford's best European market,

A prototype of a Mercedes 190 cabriolet was caught in this spy photo. It reportedly may be on the market in two years' time or less and be equipped with engines ranging from a 2-liter four-cylinder to a 2.8-liter, four-valve, in-line six producing 220 horsepower.

Yugo debt-payment plan gives dealers favored role

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — In a proposed bankruptcy settlement, Yugo America has offered its unsecured creditors only nine cents on the dollar, while its active dealers will get 50 cents, plus the remainder of their money in cars and parts.

Unsecured creditors are offered the option of receiving 21 cents on the dollar if they're willing to spread payments over three years. Dealers no longer active with Yugo are being offered the same deal as other unsecured creditors, according to sources familiar with the negotiations.

Yugo America officials confirmed that offers have been put on the table in the last two weeks, but said the specifics are confidential.

To settle its accounts and work its way out of bankruptcy, the company needs the approval of at least half its creditors, representing at least two-thirds of its total debt of more than $50 million.

During proceedings in U.S. Bankruptcy Court, the company listed about $35 million in unsecured debt and about $16 million in secured debt, which is backed by liens or other security.

If a settlement isn't reached by early September, Yugo America loses its exclusive right to devise its own reorganization plan, and the creditors could impose a plan of their own.

Peter Redston, a Jeep-Eagle and Yugo dealer in Wappingers Falls, N.Y., and head of a dealer creditors' committee, confirmed last week that dealers will eventually

Audi rejoices in ad as 'runaway' probe ends

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

Audi's battle against charges of unintended acceleration officially ended this month, and within days the company placed a one-time print ad to punctuate the results.

The ad appeared July 18 in USA Today, The Wall Street Journal and 34 major-market daily papers.

"This is a one-time, one-shot, case-closed ad," an Audi spokesman said.

On July 11, NHTSA completed its investigation of unintended acceleration. NHTSA concluded there was no mechanical or electrical defect that would cause the alleged malady, thereby vindicating Audi.

Chicago lawyer Robert Lisco sees it another way. "These guys have a lot of nerve," he said of Audi. "This case is not closed."

Lisco represents up to 300,000 Audi 5000 owners who are seeking damages for lost resale value that they blame on the unintended-acceleration controversy.

Audi did not decide to advertise the NHTSA findings on the spur of the moment. "We have had a closure case plan for the last couple of weeks. We knew the tone we wanted to get and the kind of ad. The actual words had to wait until NHTSA came up with its findings," the Audi spokesman said.

The final few paragraphs of the advertisement were written and approved the day after NHTSA's decision. Audi of America's agency is DDB-Needham in Chicago.

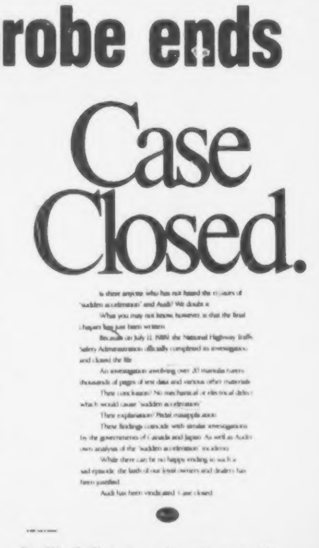
The headline — "Case Closed" — was followed by a full page of copy explaining NHTSA's findings. The final paragraph summarized the company's point of view: "Audi has been vindicated. Case closed."

Audi said it plans no television, radio or enthusiast press advertisements. The only medium outside the daily press to carry the ad is Automotive News.

The allegations of unintended acceleration have plagued Audi for three years. The allegations were brought to the public's attention by CBS's "60 Minutes."

Audi said there are no official plans to bring the NHTSA findings to the attention of "60 Minutes."

"If any of our owners or dealers wanted to point it out to them, they would get no objection from us," the Audi spokesman said.



Case Closed.

'Smokeless' diesel developed by Navistar

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

ANAHEIM, Calif. — With both federal and regional governments pushing proposals to curb air pollution, Navistar International may be in the right place at the right time with its new diesel engine.

Navistar, Chicago-based producer of International trucks, will begin testing the industry's first "smokeless" diesel engine in Southern California next year, according to John R. Horne, general manager of Navistar's engine and foundry division.

A prototype of the clean-burning engine, called the '94 Smokeless, was displayed at the 1989 International Trucking Show here.

The new design emits almost clear exhaust because it burns fuel more efficiently than the traditional diesel engines that power most big trucks, Horne said

The prototype model already meets the toughest 1994 state and federal pollution standards for diesel engines.

"We are confident that we will be able to begin full-scale production of this engine in 1994 through advances in fuel injection system and cylinder design, development of a new catalytic converter and the use of low-sulfur diesel fuel," Horne said.

The International '94 Smokeless Diesel will eliminate the kind of black smoke that has given the diesel a bad reputation.

The prototype engine also will significantly reduce emissions of every other major pollutant — hydrocarborns, oxides of nitrogen and carbon monoxide, Horne said.

A combination of technologies was used to create the smokeless engine. The prototype has a turbocharger with charge-air cooling that uses ambient air to cool the air going into the combustion chamber. That allows lower NOx without sacrificing fuel economy, Horne said.

The pistons and rings have been designed for maximum air utilization and minimum oil consumption. That helps reduce the carbon black in the particulate matter.

Navistar also installed two catalytic converters in the exhaust. They are formulated to reduce the unburned hydrocarbon portion of the particulates.

Horne said the prototype differs from the engine Navistar plans to sell in 1994 in one major respect. The prototype has a mechanically driven pump-line-nozzle system. The rate of injection of the fuel injection pump is controlled mechanically, although the pump is governed electronically.

The actual 1994 engine will be equipped with unit injectors. There, activation is controlled by electronic-hydraulic means. The system will improve the control of the injection rate and also provide better control of both injection pressure and injection timing over the engine's full range of speed and power, according to Horne.

"We still have several years of work ahead of us to turn this into an engine we can make on a production line," he said.

The company said the chief reason it can't introduce the new engine to the market sooner is that it still hasn't proved the durability of the catalytic converter for the 150,000 miles required by law.

So far, durability has been demonstrated only to 50,000 miles, the firm said.

The engine must also await widespread availability of low-sulfur fuel required for the effective use of its catalytic converters. Such fuel won't be available nationally until October 1993, according to Navistar.

Horne said the company will test the prototype engine in Southern California because that state's air resources board already requires the availability of diesel fuel Navistar needs for its converters. The next step is to find a trucking company that will test 20 to 25 trucks equipped with the smokeless diesel, he added.

Looking beyond 1994, Horne said Navistar believes it can achieve further NOx emissions reductions of up to 25 percent in its diesels and do it without significant cost increases, major fuel economy penalties or further changes in fuels.

Navistar said it has spent $20 million on research in the last few years to develop the new engine.

At this point, it may be the only manufacturer willing to state publicly that it will meet the 1994 standards cost-effectively.

Navistar gears up to double aftermarket parts business

ANAHEIM, Calif. — Navistar International captured 27 percent of the U.S. Class 6-8 truck market last year but only 7 percent of its aftermarket parts business.

Neil A. Springer, Navistar chairman and president, told the Motor Equipment Manufacturers Association here that the company will "do everything we can" to lift its parts sales to the market-share level of its new-truck sales.

Navistar plans to double its parts business over a five-year period, which began in 1987.

The company has been emphasizing dealer and customer product support as well as profitable aftermarket growth, Springer said.

A core group of dealer development managers is helping dealers to better package the firm's multitude of products and services and emphasizing value-added services to increase dealer business and profitability.

To enhance customer awareness, the firm introduced a sophisticated parts and maintenance marketing system at dealerships. The system uses retail marketing concepts, such as visual displays and promotional materials.

Navistar is "carefully, but aggressively," developing its own independent distribution system so that it enhances dealer profitability, Springer said.

SERVICE MANAGEMENT

Shop volume continues to rise

By Francis J. Gawronski
AUTOMTIVE NEWS STAFF REPORTER

Service and parts business in new-car dealerships continued to climb in May and increased for the first five months of the year.

According to the Automotive News Service Index, May's shop volume rose 9.3 percent over the business done in May 1988. The hefty increase followed a gain of 1.3 percent in April and boosted total 1989 shop volume 2.7 percent above that recorded last year.

The index is compiled from reports on shop business supplied by a cross-section of new-car dealerships in the United States.

All indicators used in the index registered healthy gains in May.

The month's results helped push five-month volume 2.7 percent ahead of last year's and 2.6 percent above the total for the first four months of 1989.

Gross profit on all labor, parts and accessories sales — the most important indicator from the dealers' viewpoint — recorded May's biggest gain, up 10.1 percent, followed by sales of all parts and accessories, which climbed 8.2 percent over figure for the year-ago month.

Shop-parts sales (customer paid and warranty) rose 7.0 percent in May, while total labor sales (customer paid and warranty) advanced 6.6 percent.

Dealers reported repair-orders written posted the second monthly gain in May, topping the year-ago volume by 2.5 percent

SERVICE INDEX
109.3★

	May '89 vs. May '88	Jan.-May '89 vs. Jan.-May '88
Gross Profit on All Labor and P&A Sales	+10.1%	+4.2%
Repair Orders Written	+2.5%	−2.2%
Total Labor Sales (Customer & Warranty)	+6.6%	+3.4%
Shop Parts Sales (Customer & Warranty)	+7.0%	+3.1%
Sales of All P&A	+8.2%	+1.3%

★ Survey by Automotive News shows that dealers' service and parts business in May 1989 was 109.3 percent of business in May 1988. Service business in the first 5 months of 1989 was 102.7 percent of business in the corresponding period in 1988

Service adviser: vital but misused

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

While many new-car dealers realize that their service department is a potential gold mine, few have been able to make that department's key position — the service adviser — pay off.

That is one of the findings of the Power Report's 1989 National Profile of the Service Adviser. Published by J.D. Power and Associates of Agoura Hills, Calif., the study is said to be the first independent, national survey of the service adviser and his role.

Although the job was created to enhance customer satisfaction and boost Customer Satisfaction Index ratings, the system is undermining the index, the Power Report said.

For example, the publication noted, most service advisers find themselves caught between customers who are dissatisfied with their warranty work and a compensation system that usually does not reward service advisers (or service technicians) for doing warranty work.

"Moreover, service advisers candidly admit that, because they typically are not compensated for warranty repairs, they work hard at avoiding them," the publication said.

"In short, the service-adviser system as it currently is practiced perversely undermines the very thing it was created to support — customer satisfaction."

The study indicated that one of the key areas in which service advisers must respond to customers is warranty service. The impact that subject appears to have on customer satisfaction cannot be overestimated, the publication said.

A great amount of the service adviser's time is devoted to resolving issues related to the customer's misunderstanding of the warranty coverage, the study found. The issue, according to the Power Report, is further complicated by the compensation structure in which the pay of the service adviser is enhanced by customer-paid labor. In that case, the report said, warranty work is not a priority.

"Can pay plans catering to this system serve both profits and customer satisfaction?" the report asked.

"The service adviser is in the middle. Damned if he does, damned if he doesn't. The pressures and stresses generated by this issue alone are further impacted by issues that revolve around a dealership that appears to see service as a necessary evil.

"Conflicting goals are set forth by both manufacturer and dealer," the report said. "The service adviser is left in the middle trying to balance the Customer Service Index and the profitability of the department."

The study found the majority of service managers feel the dealer principal does not have a true understanding of their job functions and does not care to deal with their problems or pressures.

Also, while service managers feel that the factory and dealer principal favor customer satisfaction, the dealer does not create the proper environment to make it happen on a consistent basis. The study also said that in most instances neither the factory nor the dealer is perceived to be supportive of the service manager's efforts.

The study found that 86 percent of all service advisers are on some form of commission, and 20 percent are on commission exclusively. Also, 40 percent are not qualified for the job and a much higher percentage believe that they have have not had proper training in critical areas for the assigned duties.

Respondents also noted that current dealership service appointment and operating systems are not designed to make life easy for the dealership or the customer.

The Power Report said the service adviser is the point person serving as the factory's and dealer's representative writing nearly 200 million repair orders annually. It questioned whether the industry effectively "equips this pivotal person."

That and many other "difficult questions must be answered on an industrywide basis as well as by manufacturers and individual dealerships if we are going to be prepared to enter the era of service and expect to make a profit and satisfy customers," the report said.

SERVICE BRIEFS

APAA tracks sales

LANHAM, Md. — A research service to help manufacturers track sales of aftermarket products through automotive chain stores has been announced by the Automotive Parts and Accessories Association.

The Automotive Sales Index, said to be the first of its kind, is being developed by the association and the market research firm of Audits and Surveys, New York, and will be available by subscription in January 1990.

With initial participation of 10 of the industry's largest automotive chains, Audits and Surveys will develop monthly retail sales volume and market-share reports on a wide variety of product categories. Sales will be reported on a unit basis, dollar basis and by average consumer buying price.

The association said the new service will project national product sales from a base of 2,300 automotive aftermarket chain stores. The data base sample will be drawn from aftermarket chains in which 50 percent or more sales are across the counter to do-it-yourselfers.

Dover to close Weaver

MEMPHIS, Tenn. — Dover Industries announced it will close Weaver Corp. in Paris, Ky., by late August because of continuing financial losses and reduced demand for its lift products.

Until the closing, Weaver will continue business as usual, with orders being taken, processed, produced and shipped. Weaver customers, manufacturer's representatives and distributors will continue to be supported from the Kentucky facility, a company spokesman said.

When the company closes, Rotary Lift of Memphis, another Dover Industries firm, will assume Weaver's warranty obligations. Rotary Lift also will support Weaver parts requirements to service Weaver lifts still in operation, a company spokesman said.

Allied adds rebuilder

EAST PROVIDENCE, R.I. — The automotive division of Allied-Signal has signed a partnership agreement with General Brake of Arkadelphia, Ark., the ninth in a nationwide network of independent rebuilders that reline Bendix brake shoes to meet company standards.

Bendix began selling relined brakes in January 1986. The product is sold exclusively through the Allied-Signal salesforce.

Freightliner adopts red-carpet shop plan

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Freightliner Corp. has formed a dealer service network to provide truckers with fast, quality support at competitive prices nationwide.

The program is called Fleetpack. Freightliner said truckers enrolled in the plan have access to a 24-hour emergency road service hotline, competitive parts and service pricing, priority maintenance and repair service and a credit plan.

It will be available at Freightliner dealerships and at dealerships of its subsidiary, Mercedes-Benz Truck Co. Although there is no enrollment fee, subscribers must furnish a letter of credit from a bank.

"Fleetpack is a comprehensive customer service package, designed in cooperation with our dealers, and represents another step in increasing the strength of our dealer organization," said Ernst G. Stoeckl, Freightliner president.

"Fleetpack," he said, "is designed to meet the needs of any trucking company, regardless of vehicle make or fleet size."

Fleetpack subscribers have a 24-hour phone number to call in the event of a breakdown. The operator will help the caller find a qualified shop to perform the repairs, will monitor the process to ensure timely completion of the work and will notify the fleet's headquarters when the vehicle is back in service.

Fleetpack vehicles also will receive priority service at participating dealerships. The company said that means a dealer's service department will inspect the vehicle within one hour of arrival and will start repairs within four hours after receiving authorization from the fleet's headquarters.

Freightliner said Fleetpack will provide competitive prices for both parts and labor to participating customers. Also, to ensure a uniform level of parts stocking across the country, dealers will stock a standardized list of parts recommended by the two truck manufacturers.

Stoeckl

Fleetpack also provides a private-label credit card accepted exclusively at Fleetpack dealers.

Jim Hebe, senior vice president of sales and marketing, said Fleetpack allows Freightliner and Mercedes-Benz dealers to give complete service support to their local customers wherever their business takes them.

"Freightliner recognizes the difficulty that truckers have in finding a reliable source for necessary repairs when they are out on the road," Hebe said. "In response, Fleetpack's goal is to offer superior customer support through a network of dealers with consistent parts and service programs.

"To remain competitive, fleets need maximum vehicle utilization. Fleetpack provides fleets with the tools to maximize equipment usage and minimize downtime due to road breakdowns."

Ford survey finds drivers oppose non-OE crash parts

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — More than 80 percent of consumers would support legislation requiring their written consent before non-original-equipment sheet metal crash parts are used in the repair of their vehicles, according to a national survey commissioned by Ford Motor Co.

Ford commissioned Cambridge Reports of Cambridge, Mass., to assess consumer awareness of nongenuine parts use in repairs.

According to survey results, nearly 90 percent of consumers feel strongly that they have a right to know, in advance, the origin of parts used to repair their vehicles. And 81 percent feel non-OE parts should not be used unless consumers' consent is obtained in advance by their insurance companies.

Myers

Those attitudes may be based partly on the fact that most consumers (63 percent) surveyed feel vehicle manufacturers produce higher-quality parts, according to Cambridge Reports.

The survey also revealed that 35 percent of consumers were unaware that replacement crash parts are produced by firms other than their car's original manufacturer, while more than 54 percent were not aware that factory warranties do not cover non-OE parts.

"These results confirm our belief that the vast majority of consumers feel that they should be informed in advance that imitation crash parts have been selected for collision repairs and that they should have a voice in the parts selection decision," said Kenneth W. Myers, parts and service marketing manager for Ford parts and service division.

"And the survey results show that, if given a voice, the overwhelming majority would prefer genuine replacement parts."

According to Ford, use of imitation crash parts, manufactured primarily in Taiwan, has increased dramatically in the past decade. Department of Commerce figures show that body stamping imports from Taiwan jumped from $35,000 in 1978 to $34.9 million in 1987.

Ford said that such parts tested by its engineers and by other vehicle manufacturers do not meet manufacturers' standards for fit, finish, structural integrity or corrosion protection.

By the end of 1988, 14 states had passed legislation or insurance regulations requiring, at a minimum, disclosure to the consumer when non-OE crash parts are specified for collision repairs.

Downturn ahead for dealers?

Service managers are less optimistic about the auto market

The nation's auto dealership service managers are less bullish about the automobile market today than at any time in the past four years.

Compared to a year ago, they also are less optimistic about the outlook for business at their dealerships.

These are among the findings of the fifth annual nationwide survey of dealer service managers, conducted last month by Automotive News.

Only 34.1 percent of those polled said they expect the automobile business in their markets will improve during the next two years. That is the lowest improvement response in the five-year history of the survey, and the first time it has dropped below 40 percent.

Major reasons given by those who do not expect new-car sales to climb include:

"Too many manufacturers building too many cars."

"I feel the economy is slowing, so business will slow."

"We expect a rise in inflation, and a drop in consumer spending."

"Cars are priced too high, and they're going to be higher."

"We're concerned about over-saturation of market and a growing number of new-car dealers."

"The market is soft, prime is high and there's a surplus of products as we head into 1990."

"The market has got to drop after higher new-car sales the last three years."

"People are slowing down new-car buying. They seem to be keeping their cars longer."

"It looks like a market recession is due."

"The industry is reaching a saturation cycle, and the trend toward long-term financing and improved product quality will keep people in their vehicles longer."

As for new-car business at the dealerships they work for, 74.2 percent of service managers surveyed said they expect it to improve over the next three years. That is down from 78.4 percent last year.

On the other hand, an all-time high 6.1 percent said they expect car sales at their dealerships to go down between now and 1991. Among the reasons:

"Our highline German imports are becoming too expensive compared to domestic and Japanese products."

"New-car sales in general will go down, and we will follow the trend."

"We have been in a depressed area since 1984, due a lack of oil-related jobs. We don't see that changing."

"Product proliferation and ever-increasing competition are diminishing our opportunity for higher sales and gross profits."

"The big problem with the future is today's 60-month financing."

While they may be less optimistic about future new-car sales, service managers are in a good mood over business profits in their own departments.

Exactly 95.5 percent said they and their dealership management believe their service operations offer a potential for greater future profits. That is the highest rate since 1986 (96.0 percent). Among the reasons for their positive attitude on service profitability:

"There are fewer qualified service outlets at a time when the complexity of cars is increasing. That means more business for those who can handle it."

"We are aggressive. We have a professional service management group. We are constantly targeting areas to increase gross profits and control expenses."

"More people are taking their cars to factory-approved service centers."

"Increased technology demands will give astute franchised dealers an increasing advantage in service business."

"We recently moved into new facilities, and our service business is just beginning to grow"

"Due to new-car prices, most people will have to keep their cars. That means more service work."

"Dealership service shops are becoming more efficient on electronics. The independents can't keep up. We'll profit from that."

"As vehicles are retained longer, we have a greater service potential, especially with effective merchandising."

"Increased profits will come in spite of our dealership management, which continues to express the archaic opinion that the service department is just a monkey on the back of the dealership. They're learning, but slowly."

"People can't hardly get independent outside garages to work on new cars any more. There's too much technology involved."

"We have been investing in quality equipment and personnel. And we're concentrating more on service advertising."

"Our growing awareness of customer satisfaction is starting to pay off."

"We're getting more training, and proper tools to do the job."

"The cars are so advanced that GM dealerships will be the only ones able to work on GM cars."

"Management has finally become intelligent enough to realize the service department has to be a profit center to survive. They've found out there's a market out there that our dealership hasn't tapped into in the past."

"Technology changes are forcing out mass merchandisers, service stations and independents. The public has to rely on the expertise of new-car dealerships."

"Service, used cars and F&I will prop up decreased new-car gross profit in the next year or two."

"Our dealer management realizes that with limited new-car sales coming, more emphasis is needed on parts and service sales."

"More and more people are looking for good service backup when purchasing new cars. We are concentrating on that."

Just 65.9 percent believe their dealerships are spending enough on advertising and promotion to improve their service business. That is down slightly from last year. Many of those who do advertise stress their use of local newspapers for that purpose. Among the comments:

"We advertise in two local newspapers every week."

"Approximately 4 percent of our service gross is spent on advertis-

COMING AUG. 21: AUTOMOTIVE NEWS DEALER PROFITS EXTRA

Automotive News Survey of Dealer Service Managers

Note: Figures indicate percent of total responses for each question, each year; in some cases, totals do not add to 100 percent because either multiple responses to a question were given or no response was given. Blank areas indicate questions that are new to that year's survey.

Question 1: What do you consider the business outlook to be for the automobile market in general and your dealership specifically for the next two years?

	Automobile Market				
	1989	1988	1987	1986	1985
Improve	34.1	44.3	50.0	61.2	64.9
Same	38.6	39.2	27.9	32.6	25.7
Worse	23.5	12.4	22.1	6.2	9.4

	Dealership				
	1989	1988	1987	1986	1985
Improve	74.2	78.4	74.3	88.0	86.9
Same	17.4	16.5	20.0	8.0	10.2
Worse	6.1	1.5	5.7	4.0	2.9

Question 2: Do you, as a service manager, feel that your service department offers a potential for increased profits in the future?

	1989	1988	1987	1986	1985
Yes	95.5	94.8	94.4	98.0	98.6
No	3.0	5.2	5.6	2.0	1.4

Question 3: Do you feel that your dealership management believes the service department offers the potential for increased profits in the future?

	1989	1988	1987	1986	1985
Yes	95.5	92.8	90.0	96.0	97.1
No	1.5	6.2	10.0	4.0	2.9

Question 4: Do you, as a service manager, believe your dealership is spending enough on advertising and promotion to improve your service business?

	1989	1988	1987	1986	1985
Yes	65.9	67.5	62.5	74.0	72.3
No	33.3	30.4	37.5	26.0	27.7

Question 5: Who hires the service technicians in your service department?

	1989	1988	1987	1986	1985
Dealership owner	13.6	11.3	18.1	15.5	15.7
Dealership manager	8.3	5.7	2.7	2.9	5.7
Service manager	91.7	92.3	91.7	88.9	87.6
Other	9.8	10.8			

Question 6: Compared to last year, finding competent service technicians today is:

	1989	1988
Less difficult	4.5	3.1
Same	22.7	23.7
More difficult	71.2	71.1

Question 7: Do you have women service technicians?

	1989	1988
Yes	1.5	5.2
No	98.5	92.3

Question 8: When your dealership buys new service equipment and services, are you involved?

	1989	1988	1987	1986	1985
Yes	97.0	96.4	100.0	100.0	100.0
No	2.3	3.6	0.0	0.0	0.0

If yes, which one statement below best describes your involvement?

	1989	1988	1987	1986	1985
Originate purchase request	59.8	57.8	53.5	62.0	62.9
Approve make(s) selected	39.4	47.6	39.4	48.0	38.6
Negotiate terms	25.0	32.1	19.7	28.0	22.9
Give advice on needs	50.8	49.2	42.2	58.0	37.1

Question 9: Does your dealership plan to buy any service equipment this year?

	1989	1988	1987	1986	1985
Yes	49.2	58.8	59.2	55.0	61.5
No	46.2	38.1	40.8	45.0	38.5

If so, what type?

	1989	1988	1987	1986	1985
Tuneup	15.4	15.8	30.9	24.5	21.4
Wheel alignment	24.6	31.6	21.4	26.4	18.6
Wheel balance	12.3	12.3	14.3	11.8	10.0
Brakes	16.9	15.8	11.9	7.1	5.6
Transmissions	7.7	7.0	9.5	2.9	1.8
Engine overhaul	3.1	1.8	9.5	3.7	2.9
Refinishing	4.6	14.0	9.5	1.8	—
Frame-body straightening	6.2	7.0	7.1	10.8	10.0
Computerized diagnostic (console)	27.7	37.7			
Computerized diagnostic (hand-held)	26.2	19.3			
Other	21.5	25.4	40.5	30.0	29.7

Question 10: Are 1989-model cars more profitable to service than those of previous years?

	1989	1988	1987	1986	1985
Yes	8.3	8.2	12.5	13.7	11.4
No	37.9	43.8	40.3	50.9	54.3
Same	52.3	46.4	47.2	35.4	34.3

COVER STORY

Continued from page E2

ing, primarily papers."

"During slow periods, we spend about 5 percent of service gross on ads. We are planning on that."

"We are using daily papers and direct mail to tell people that we have a brand new $10 million facility to service them. It's working."

According to the survey, tuneups continue to be the most profitable service operation, followed by brake and transmission work.

The contribution of transmission service as a profit generator climbed to its highest level in the five-year history of the survey. The least profitable operation — for the first time — is rustproofing, followed by wheel balancing and body shop work.

The most significant generator of service business continues to be general customer drive-in, although it is down slightly from last year. In attracting business, it is followed by special service packages (up somewhat from last year), new-car warranty work (down slightly) and extended service contracts (down considerably).

Among those surveyed, 49.2 percent said their dealerships will buy service equipment this year. That is the lowest percentage in the history of the survey, and down nearly 10 points from a year ago.

Of those who intend to buy equipment, the most popular purchases will be computerized diagnostic equipment (console and hand-held), followed by wheel-alignment equipment.

Lowest on the purchase list are engine overhaul, refinishing, frame-body straightening and transmission equipment.

The role of the service manager in the dealership's acquisition of shop equipment continues to show through in the 1989 survey. Exactly 97 percent said they are involved in the buying process.

Indicating a trend during the past year toward shorter service department hours, 20.5 percent of the managers say their shops are open less than 45 hours a week, the highest percentage in survey history. Another 43.9 percent said their departments are open only 45-50 hours.

Meantime, the number of service departments open more than 60 hours fell to 8.3 percent this year from 13.9 percent last year.

Also on the decline is service department employment. This year, only 12.1 percent of the service managers say they employ more than 40 parts and service personnel, down from 17.5 percent last year.

This contrasts to a rise (29.5 percent in 1989 versus 23.2 percent in 1988) in departments employing just one to 10 people.

Service managers continue to assume major responsibility for hiring dealership technicians.

For the third straight year, more than 90 percent say they handle the hiring.

Asked whether finding competent technicians today is more difficult than last year, more than 71 percent said yes. That is unchanged from last year.

There has been a decrease in the number of women service technicians, according to the 1989 survey. Only 1.5 percent of the service managers say they have women technicians working in their departments, down from 5.2 percent last year.

As for compensation, this year's survey indicates a trend toward pay boosts for veteran service managers.

Most service managers (26.5 percent, an all-time survey high) indicate their total compensation (including salary, overtime, bonus, incentives, stock) tops $50,000 annually. There also is an increase in the number of service mangers earning $40,000-$49,999.

However, there are also more service managers this year who are making less than $15,000 and $15,001-$19,999 annually.

In most cases (35.6 percent), compensation is comprised of salary plus incentive. That is up from 30.9 percent in 1988. Last year, the top compensation consisted of salary plus bonus.

Compared to last year's survey, this year's shows a decline in the number of service managers who believe their salary and benefits are commensurate with their experience.

Last year, 62.9 percent said they were satisfied with their pay checks. The number is down to 56.8 percent this year.

As was the case the previous three years, most service managers in 1989 are in the 35-39 age bracket (21.2 percent).

And as was the case the previous two years, most have been service managers for less than three years (26.5 percent). Most of them (49.2 percent) were mechanics before becoming service manager.

Asked whether 1989-model cars are more profitable to service than those of previous years, most managers (52.3 percent) say they are the same, down from 46.4 percent last year.

As for the challenge of servicing today's high-tech cars, they aren't all that much more difficult, according to service managers.

Only 37.1 percent say '89 model cars are more difficult to service than those of previous years. That is down from 40.7 percent a year ago.

That notwithstanding, 41.7 percent of the service managers this year say they subcontract service work out to specialists when it involves high-tech repair.

Asked if their service shops are having difficulties with today's high-tech basecoat/clearcoat paints, 40.2 percent of those surveyed respond yes, 53.8 percent say no.

This year for the first time the survey includes questions related to quick lube/oil change and "detailing" businesses as a means of boosting the profitability of service departments. (Detailing is considered to be the painstaking cleaning and polishing of a vehicle, for which customers are charged upwards of $100.)

Of those surveyed, 47.7 percent said their department offers quick lube/oil change service. Of those who say they do not offer it, 50.0 percent add that they plan to do so in the near future. These results indicate that before long, among those surveyed by Automotive News, more than 97 percent of the service operations will be in the quick lube/oil change business.

As for the vehicle-detailing, 65.9 percent of those surveyed say their departments currently offer that service to customers, and another 7.0 percent indicate they plan to do so in the near future. That comes to a cumulative positive response of 72.9 percent. ■

Question 11: Are 1989-model cars more difficult to service than those of previous years?

	1989	1988
Yes	37.1	40.7
No	25.8	25.3
Same	36.4	33.0

Question 12: How many hours per week is your service department open?

	1989	1988	1987	1986	1985
Less than 45 hours	20.5	12.9	11.1	18.0	18.6
45 to 50 hours	43.9	38.7	54.2	60.0	38.6
51 to 55 hours	15.9	22.7	20.8	14.0	27.1
56 to 60 hours	11.4	11.9	9.7	6.0	11.4
More than 60 hours	8.3	13.9	4.2	2.0	4.3

Question 13: How many employees are there in your service department including parts and service personnel?

	1989	1988	1987	1986	1985
1 to 10	29.5	23.2	25.0	28.0	25.7
11 to 20	34.1	32.0	27.8	18.0	28.6
21 to 30	10.6	15.5	33.4	36.0	15.7
31 to 40	13.6	11.3	6.9	8.0	17.1
More than 40	12.1	17.5	6.9	10.0	12.9

Question 14: What is your most profitable service operation?

	1989	1988	1987	1986	1985
Tuneup	39.4	37.6	50.7	24.0	40.3
Wheel alignment	15.2	12.9	14.5	6.6	9.0
Wheel balance	4.5	8.2	8.7	4.0	1.8
Brakes	28.0	32.0	34.8	25.3	20.4
Transmissions	22.0	13.9	15.9	6.6	10.4
Engine overhaul	15.2	9.8	10.1	13.3	3.3
Rustproofing	3.8	12.9			
Body shop	7.6	10.3	11.6	9.3	6.1
Other	20.5	14.9	13.0	10.6	8.7

Question 15: How much of the following contribute to your service profits?

1989	Significantly	Some	None
New car warranty work	37.9	56.8	1.5
Extended service contracts	25.0	65.2	6.8
General customer drive-in	77.3	21.2	0.0
Special service packages	40.2	51.5	4.5
1988	Significantly	Some	None
New car warranty work	41.2	50.0	7.2
Extended service contracts	36.1	56.2	3.6
General customer drive-in	73.6	23.8	0.0
Special service packages	38.7	46.9	7.7
1987	Significantly	Some	None
New car warranty work	40.3	54.2	5.5
Extended service contracts	34.3	62.9	2.8
1986	Significantly	Some	None
New car warranty work	40.8	48.9	10.2
Extended service contracts	27.0	66.6	6.4
1985	Significantly	Some	None
New car warranty work	44.3	48.6	7.1
Extended service contracts	17.1	67.3	15.6

Question 16: Do you subcontract service work to specialists for jobs involving high-tech repair?

	1989
Yes	41.7
No	58.3

Question 17: Has your shop had any difficulties with today's high-tech basecoat/clearcoat paints?

	1989
Yes	40.2
No	53.8

Question 18: Does your service department offer quick lube/oil change service?

	1989
Yes	47.7
No	50.0

Question 19: If not, does it plan to in the near future?

	1989
Yes	50.0
No	48.5

Question 20: Does your service department offer detailing to customers?

	1989
Yes	65.9
No	32.6

Question 21: If not, does it plan to in the near future?

	1989
Yes	7.0
No	93.0

Question 22: What is your age?

	1989	1988	1987	1986	1985
18 to 24	1.5	2.1	2.9	4.0	0.0
25 to 29	13.6	8.8	9.7	16.0	15.7
30 to 34	13.6	18.6	15.3	16.0	11.4
35 to 39	21.2	20.6	26.4	26.0	18.6
40 to 44	19.7	18.6	20.8	16.0	22.9
45 to 49	14.4	12.9	8.3	10.0	12.9
50 to 54	9.8	8.8	6.9	2.0	11.4
55 to 59	2.3	5.7	6.9	4.0	4.3
60 to 64	3.0	2.1	1.4	6.0	2.8
65 or over	0.0	1.0	1.4	—	—

Question 23: Before becoming a service manager at your present or at any other dealership, what type of job did you have?

	1989	1988	1987	1986	1985
Write-up man	34.8	34.2	30.6	24.6	31.4
Mechanic	49.2	51.0	43.4	43.4	37.2
Parts manager	15.2	21.1	7.3	8.6	5.7
Other	34.1	37.1	18.7	23.4	25.7

Question 24: How many years have you been a service manager (including time spent at previous dealerships)?

	1989	1988	1987	1986	1985
1 to 3	26.5	24.9	20.8	19.6	22.9
4 to 7	23.5	19.7	19.4	33.3	21.4
8 to 11	23.5	22.3	26.4	17.6	15.7
12 to 15	9.8	12.4	13.9	5.8	12.9
16 to 19	5.3	8.8	8.4	9.8	11.4
20 or more	10.6	11.9	11.1	13.9	15.7

Question 25: What was your total compensation last year for being a service manager?

	1989	1988	1987	1986	1985
Less than $15,000	3.0	0.5	2.7	4.1	2.9
$15,001 to $19,999	5.3	3.1	11.3	4.1	10.0
$20,000 to $24,999	6.8	11.9	14.1	18.7	14.3
$25,000 to $29,999	12.9	11.3	7.0	10.4	24.1
$30,000 to $34,999	14.4	12.9	9.9	8.3	11.4
$35,000 to $39,999	9.1	12.9	12.7	20.8	10.1
$40,000 to $44,999	10.6	9.8	11.3	14.5	8.7
$45,000 to $49,999	7.6	5.7	9.9	6.2	10.2
$50,000 or more	26.5	25.8	21.1	12.5	8.3

Question 26: What was your total compensation for being a service manager based on?

	1989	1988	1987	1986	1985
Salary only	15.2	12.9	15.3	9.4	8.6
Salary + overtime	0.8	0.0	0.0	1.8	1.9
Salary + bonus	34.1	42.8	31.9	26.7	38.6
Salary + incentive	35.6	30.9	41.7	43.6	45.2
Salary + stock	1.5	0.0	1.4	—	—
Salary + other	11.4	11.3	9.7	18.5	5.7

Question 27: Do you believe your salary and benefits are commensurate with your experience?

	1989	1988	1987	1986	1985
Yes	56.8	62.9	50.0	48.9	54.2
No	40.9	33.0	50.0	51.1	45.8

Zimmer's plan to reorganize gets court nod

POMPANO BEACH, Fla. — Zimmer Corp. said the Bankruptcy Court for the Southern District of Florida confirmed its plan for reorganization following the favorable vote of its creditors.

As a result of the confirmation, Zimmer will emerge from its Chapter 11 bankruptcy proceedings.

Upon emergence from Chapter 11, Zimmer will continue to convert vans and chassis and upfit sport and recreational vehicles.

Zimmer is an authorized van converter for General Motors and Ford Motor Co., according to Terry P. McMahan, the company's president and chief executive officer.

Fruehauf, Terex complete sale of trailer line

DETROIT — Fruehauf Corp. said it completed the sale of its trailer, maritime and CEMCO businesses to Terex Trailer Corp., a subsidiary of Terex Corp.

Fruehauf received approximately $231.3 million, consisting of $171 million in cash, a promissary note of $6.5 million and the assumption of long-term debt of about $53.8 million.

Proceeds of the sale are being used by Fruehauf to pay off $35 million of interest on its 13.5 percent senior subordinated notes and 13.75 percent senior subordinated debentures and to repay borrowings of about $133 million under its bank credit agreement.

The balance of the proceeds are being used for working capital.

Warranty arbitration OKed for Toyota in Fla.

TORRANCE, Calif. — Toyota Motor Sales U.S.A. has received certification from the state of Florida to resolve vehicle warranty disputes through its third-party arbitration, making it the first import auto company to offer such a program in that state.

Toyota qualified for the certification from Florida's Department of Agriculture and Consumer Affairs after developing a program consistent with state requirements and Federal Trade Commission rule 703, which sets strict guidelines for settling disputes during a vehicle's warranty period.

Toyota satisfied the Rule 703 provision that calls for an unbiased, independent third party to arbitrate disputes.

Survey names Ford in list of 10 best workplaces

DEARBORN, Mich. — Ford Motor Co. is one of the best companies at which to work, according to a survey commissioned by the Society of Manufacturing Engineers.

Ford was the only automaker among the 10 companies selected.

Judging criteria included compensation and benefits, job security and the manufacturer's commitment to producing safe, high-quality products.

The other companies were Apple Computer, Boeing, General Electric, Digital Equipment, IBM, Eastman Kodak, AT&T, Hewlett-Packard and Westinghouse.

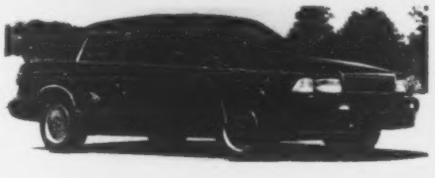
Intermediate segment sales rise

Six new entries nibble away at Taurus while specialties fall off

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER



Plymouth Acclaim was the best-selling new intermediate.

In a first half scarred by sales declines, the intermediate segment of the U.S. market was the only one to show a year-to-year sales increase, according to an Automotive News analysis.

There were 14 new entries this year, six of them in the hot-selling intermediate class.

Chrysler Motors accounted for four of the 14 newcomers.

Sales of intermediate cars rose 2.12 percent for the first half to 1,541,637 compared to the year-ago total of 1,509,656.

Of the six new models that joined the intermediate class in the first half of 1989, Plymouth Acclaim — with 43,077 retail deliveries — was the best seller.

Top-selling intermediate was the Ford Taurus, though Taurus six-month sales dropped to 185,440 this year from 210,973 in in the first half last year.

All other market segments showing decreases, and on a percentage basis, the largest decline was in the speciality class.

Sales of specialty cars from January through June totaled 59,390 units, down 33.22 percent from last year's first-half total of 88,935.

Two models joined the speciality category during the first half of 19089.

Mazda introduced its two-seat Miata. It went on the sale late in the first half and garnered 1,756 deliveries. Chrysler Motors' TC by Maserati accounted for 709 first-half sales.

The leader in the speciality class was Nissan's 300ZX.

The subcompact category had the second-largest decrease from a percentage standpoint.

Six-month sales of subcompacts totaled 1,059,187 units, 15.68 percent below the 1,256,130 sold during the year-earlier period.

The Eagle Summit was the sole new entry in the subcompact segment. First-half Summit sales totaled 12,048 units.

Ford Escort retained its No. 1 spot in the subcompact category with 174,382 sales in the January-June period.

Sales of standard-sized cars slowed to 689,171 in the first six months of 1989, a drop of 13.48 percent from the 796,506 sold in the comparable period last year. There were no new models in the standard category this year. Best seller in the class was the Cadillac DeVille.

Sales of compact cars, which had accounted for the largest increase during the second half of 1988, slipped in the first half of 1989. Subcompact sales dropped 5.79 percent to 1,739,093 in the January-June period, compared to 1,846,022 in the first six months of 1988.

Three models joined the compact category. Among those newcomers, Plymouth Laser had first-half sales of 8,818 while its sister, the Mitsubishi Eclipse, had sales of 11,230, and the Subaru Legacy posted sales of 5,412.

Corsica-Beretta, the best selling compact for the six-month span, also was the best-selling line model for all categories.

Rounding out the list of the five top-selling models for the first half were the Ford Escort, Ford Taurus, Honda Accord (compact) and Toyota Camry (compact).

The Automotive News market-class list includes cars sold in the United States.

TOP TEN SELLING CARS FIRST HALF 1989

1989 Position	1989 Sales	Make	1988 Sales	1988 Position

ORDERS

FROM PAGE 1

ment packages, which simplify ordering by grouping popular items.

Those packages reduce a dealer's choice to one of a dozen or less factory-prepared popular item packages per vehicle, rather than the hundreds of potential equipment combinations. Some stand-alone options also are available.

Dealers have a big stake in the issue because a popularly equipped car in the right color may sell quickly while an unpopular car can run up a big floorplan bill.

Car manufacturers and independent suppliers, like PMH/Caramanning of Bloomfield Hills, Mich., provide varying degrees of information to guide dealers in color and equipment choices.

Some 2,000 Buick and GMC Truck dealers, for example, pay PMH/Caramanning $12 to $19 a month for such information, according to Joni Brown, director of corporate marketing for PMH/Caramanning.

Ford Motor Co. also issues what a company spokesman described as a monthly "fast-turn" report to its dealers, informing them of the latest color and equipment popularity trends in their regions.

Chrysler's new program goes beyond such efforts by analyzing sales data for each dealership, comparing each dealer's sales performance with regard to the equipment on every model against that of other dealers in his area and dealers in other markets with similar customer demographics.

It creates and compares sales clusters by taking the serial number of every Sundance model sold, for example, spreading out every option on it and comparing it to every other Sundance, measuring how long each configuration remains in stock before it is sold.

If a dealer sells a model faster than average with specific equipment, he gets his order pattern back as a recommendation. Otherwise, the company recommends different equipment and color combinations.

Sundance offered 2,700 color and equipment combinations in the 1989 model year, Dowd said. But about 5 percent of the combinations accounted for 95 percent of the car line's sales.

The new program reduces the combinations to 300, including a number of packages and some free-standing options dealers can still choose.

The average 1989 Sundance model sat for 70 days on a dealer's lot before it was sold. But 30 percent of them — those ordered with oddball items and colors — sat for about 150 days, Dowd said.

The company's goal is to shave 10 days off the sales turn rate and weed out slow sellers.

"If we improve the turn rate and keep the same inventory, we'll (company and dealers) sell more cars," Dowd said.

Some 90-95 percent of all Sundances are sold off the lot, underscoring the importance of a dealer's selection.

Auto dealers throughout the industry tend to sell most of their cars from inventory rather than through special customer orders. That reflects dealers' desire to close deals quickly rather than risk losing customers to a competitor while waiting for a special order.

Dealers have responded strongly to the new Chrysler program, Dowd said.

Some 96 percent of the 15,000 1990 Sundance/Shadow models ordered so far have come through the company's new system.

Equally significant is that a single package has accounted for 40 percent of all orders, Dowd added. That helps the company's manufacturing operation by greatly simplifying plant-loading schedules.

The package includes automatic transmission, air conditioning, tilt steering wheel, rear-window defroster and other high-volume items.

"We tried to stair-step and tier packages the way people actually buy them. People don't want 2,700 combinations of a car. They don't want a lot of peculiar things. They tend to fall into particular buying patterns," he said.

Bruce DiBiase, customer relations manager at Buhler and Bitter Chrysler-Plymouth in Hazlet, N.J., helps order cars for his dealership. He said Chrysler's system imposed order restrictions that required getting used to, but also greatly simplified the ordering process.

"All you have to do is check one block, and you have ordered the car," DiBiase said.

EUROPE

FROM PAGE 3

sales jumped 18.5 percent to 50,000 units in June and rose 9.8 percent to 326,800 for the first half.

Among specialist makers, BMW sales increased 18 percent in the first half to 212,700, and market share moved from 2.6 percent in 1988 to 2.9 percent in 1989.

In Germany, BMW jumped 19 percent in the first half to 111,300. That was good for a 7.3 percent share, a full percentage point higher than last year.

Elsewhere in Europe, BMW's sales rose 25.1 percent to 15,800 in Italy, 23 percent to 24,400 in the United Kingdom, 11 percent to 13,100 in France and 61.5 percent to 10,500 in Spain.

First-place Fiat's European sales increased 7.3 percent to 1,126,800 in the first half. The Italian maker was up 7 percent to 178,300 in June.

But second-place VW is slowly narrowing the gap, outselling its rival by about 10,000 units in June. VW sales rose 4.3 percent to 188,130 for the month — good for 16 percent of Europe's June market, compared to Fiat's 15.2 percent.

NEW-CAR SALES BY COUNTRY IN EUROPE

Country	6 mos., 1989	Percent gain/loss
West Germany	1,525,900	+ 3.2
Italy	1,363,500	+11.0
United Kingdom	1,196,400	+ 8.3
France	1,111,700	+ 5.8
Spain	598,200	+10.2
Netherlands	312,700	− 0.2
Belgium-Luxembourg	275,500	+ 0.3
Switzerland	197,000	+ 7.7
Sweden	164,400	− 8.1
Austria	157,900	+12.6
Finland	103,500	+ 6.3
Portugal	101,100	− 0.5
Ireland	49,200	+25.9
Denmark	45,600	−14.5
Greece	33,800	+21.6
Norway	27,000	−31.4
Total	7,263,400	+ 6.0

In the first six months, VW sales were up 6.6 percent to 1,069,400. VW is keeping pace with the market in Germany and making headway in the other major European countries. In Italy, sales increased 14.4 percent to 166,800 in the first half. VW climbed 20.3 percent to 93,500 in France and 16.7 percent to 72,500 in the United Kingdom.

The VW brand, which controls nearly 10 percent of the European market, rose 7.8 percent to 720,000 units in the first half, while the Seat subsidiary increased 9.9 percent to 155,500 across Europe. Audi fell a tenth of a percentage point in the first six months, with sales of 194,000 cars. Audi's first-half sales were off 13.2 percent in Germany, to 87,400.

Peugeot S.A., Europe's fastest-growing volume carmaker in 1987 and 1988, was up 8 percent to 938,600 in the first half after slowing down in the second quarter. Market share was 12.9 percent for the year, the same level at which Peugeot finished 1988.

Among specialist makers, Mercedes slipped in Europe in the first half, with sales dropping 4 percent to 232,100 and market share dipping to 3.2 percent from 3.5 percent. Mercedes sales declined 11.3 percent to 137,300 units in West Germany, where market share shrunk from 10.5 percent to 9 percent.

Japanese makers grew 2 percent in the first six months to 775,600, for 10.7 percent of the European market. Nissan was tops among Japanese makers with sales of 213,300, a jump of 8.9 percent. Its market share was 2.9 percent.

Among national markets, Germany rose 2.4 percent in June to 276,000 units following a 5.1 percent decline in May. For the first half, new-car sales in Germany were 1,525,900, a gain of 3.2 percent over 1988.

The current rate appears to give Germany a chance to top its record 1987 sales of 2.92 million cars. Last year, German sales slipped to 2.81 million.

Italian sales continued strong, surging 12.4 percent in June to 218,000. In the first half, sales improved 11 percent to 1,363,500.

The United Kingdom was up 3.5 percent to 174,700 in June and ahead 8.3 percent to 1,196,400 for the first half. France rose 7.2 percent in June to 151,000 and climbed 5.8 percent in the first half to 1,111,700.

Spanish sales continued to grow, although at a less-spectacular rate than in 1986-88. Sales rose 8.4 percent in June to 110,000 and were up 10.2 percent for the first half to 598,200.

Kan. UAW local honored for work with homeless

KANSAS CITY, Kan. — UAW employees at the General Motors Fairfax plant have received the Volunteer Action Award for developing and operating the Kansas City Rebound Center for homeless people.

Workers at the plant, who build the Pontiac Grand Prix, raised $100,000 for the center. Bud Carroll, Local 31 president, accepted the award from President Bush during a White House ceremony.

NISSAN

FROM PAGE 2

Proud," and "Say No To UAW."

If the union fails, Lowe predicts his side will contest the election over Nissan's failure to release employee injury records in accordance with Tennessee Department of Labor instructions, and seek a rematch.

At stake are more than Nissan's 2,400 eligible production workers, or even the 2,000 workers who will be added when the Smyrna plant doubles production over the next two years. The gain in union membership is debatable, since Tennessee is an open-shop state and workers are not required to join the union.

More important in the contest is what it will reveal about the UAW's ability to rise to the challenge of Japanese management, argues Robert Cole, professor of sociology and business administration at the University of Michigan.

"It comes down to a symbolic question of whether the UAW can organize the Japanese, with their mystical ways of running plants," Cole said. "Nissan has been very outspoken in its anti-unionism, and it would be a very symbolic win for the UAW. At the same time, a loss would be a real blow to their (the UAW's) confidence."

> **"It comes down to a symbolic question of whether the UAW can organize the Japanese, with their mystical ways of running plants."**
>
> **— COLE**

Nissan is one of only three nonunionized auto assembly plants in the country, and all three are Japanese companies operating in ways that are new to the American auto industry. The UAW withdrew from a bid to organize Honda of America Manufacturing in Marysville, Ohio, three years ago and has never been back. Toyota Motors' new Camry plant in Georgetown, Ky., only recently learned that the UAW is preparing to mount its first campaign there.

A win at Nissan may provide the other plants a signal on their own future labor relations. "If the union wins at Nissan, I predict you'll hear an announcement very quickly from Toyota to the effect that it intends to cooperate with the UAW at Georgetown," Cole said. "If that happens, there may even be hope for Honda in the union's eyes."

The election will also be significant for Japanese auto suppliers now moving into the United States. Suppliers often take their cue in labor relations from their original-equipment customers, Lowe points out. If the UAW succeeds at Nissan, it will open the door for organizing Nissan's suppliers, he said.

A victory would also lend support to UAW organizing efforts around the Mid-South, where many transplants are locating and many domestic operations were never conquered. The union, typical of the AFL-CIO as a whole, has still not fully penetrated the South. Over the past five years, in fact, the UAW has called 774 local elections around the country. Only 84 of them occurred in the South.

More telling is the UAW's recent won-loss record. For the country, the union has lost 54 percent of all elections held since 1985. In the South, the UAW has lost 65 percent of its elections.

YUGO

FROM PAGE 3

be paid back all the money they are owed, but he said the amount of upfront cash is subject to negotiation.

Yugo America and its parent company, Global Motors, declared Chapter 11 bankruptcy Jan. 30, but Yugo America is now seeking to settle its debts and reorganize as a subsidiary of Zavodi Crvena Zastava, the Yugoslavian manufacturer of the Yugo.

Yugo America owes its dealers about $2.5 million, mostly for rebate and warranty claims.

Some dealers have reacted favorably to the 50 percent offer, but it may not sit well with the rest of the company's unsecured creditors, sources said.

Also, some dealers who have given up their Yugo franchises or have stopped selling Yugos may not like the proposals because Yugo America has stipulated that "active" dealers will be paid in full, while "inactive" dealers will be given nine cents on the dollar.

Most of the company's secured creditors are covered by agreements, so negotiations are expected to center on the unsecured creditors.

For instance, Manufacturers Hanover Trust Co. is owed about $3 million, but the bank has a lien on the company's inventory and is being paid as cars are sold.

Yugo America owes about $6.2 million to its 20 largest unsecured creditors, not counting dealers.

Lambert Dale Advertising, Yugo's ad agency, tops the list at $2.7 million. Car haulers are also among the leading unsecured creditors.

Paul Lambert, a partner in the New York ad agency, is chairman of the unsecured creditors' committee. Dealers have their own committee, headed by Redston.

Based on the settlement negotiations, the committees will recommend to the creditors at large whether to accept Yugo America's offers, but the creditors are not bound by the recommendations.

Any settlement also would have to be accepted by Chief Bankruptcy Judge Vincent J. Commisa in Newark, N.J.

If the creditors accept a settlement, it could be more than six months before Yugo America emerges from Chapter 11, said Robert Baime, attorney for Impex Car Corp., the New York-based agent for Zastava in the United States.

Lambert acknowledged last week that Yugo America's failure forced his advertising agency to fold, and he has since gone to work for Global Motors founder Malcolm Bricklin at Bricklin's ranch in Meeker, Colo.

In April 1988, Bricklin sold his 70 percent interest in Global Motors to a group of private investors led by the Wall Street firm of Mabon, Nugent for a reported $20 million, though Bricklin is reported to have received only about $14 million.

TRUCKS

FROM PAGE 1

Aerostar, Econoline and Club Wagon vans, the large F-series and smaller Ranger pickups and the Bronco and Bronco II sport-utility vehicles. Each of those vehicles was based on one platform of varying wheelbase, formed through modular construction methods.

Also on the program was to have been a four-door Bronco to compete with Chevrolet's Suburban and a mid-sized pickup to go head-to-head with the Dodge Dakota, as well as a Mazda-badged Ranger pickup.

Those vehicles would have been introduced from 1993 to 1996.

Key to the PN38 program was its modular adaptability. The idea: A common platform on which would be built front-, rear- and four-wheel-drive vehicles with two different wheelbases. To those modular platform variations would be added modular four-, six- and eight-cylinder engines.

The engine program is still in full swing. At Ford's Cleveland Engine Plant No. 2 last week, Trotman said the plant would be the $735 million home to one of the company's new family of engines.

The confluence of new technologies — engine and platform modularity coupled to composite-structured vehicles — played the primary role in changing Ford's mind about the PN38 program.

The insider said the technology is so advanced that Ford didn't have the resources — engineers, tooling or investment — to make it work.

Another possible contributing factor is talk within Ford that each platform program would live or die based on its ability to meet profitability targets and to contribute to truck corporate average fuel economy standards.

The PN38 program did not lack support. According to an insider exposed to the market research, "it was an absolute home run. Everything was very positive and it seemed to be on the right track."

While denying that the program has been scrapped, a Ford spokesman acknowledged: "There is a fair amount of uncertainty surrounding our forward-look programs — as I'm sure is the case elsewhere — particularly when you take into account CAFE standards and what they will be years out. If you look at the outer limits, talk in Washington puts the figure at 40 mpg. While no laws have been passed, you have to take (figures like those) into account when you determine forward-look programs."

With CAFE standards still up in the air, Ford did not feel comfortable undertaking such a broad product program as PN38.

A source close to the project said new long-range truck plans, now sketched in pencil, would be firmed up following a meeting of Ford's policy and strategy committee in August or October.

Replacing PN38 is a new Ford truck product plan — derived by consensus from product planners and truck engineers — that is less ambitious and more drawn out, with introductions from 1993 through 1998.

- The modular Aerostar replacement which, before the PN38's death, had been scheduled for 1993, becomes a long-wheelbase derivative of the Ford-Nissan joint-venture minivan, coded VX54. The Aerostar replacement, to be built in Avon Lake, Ohio, will appear as a 1994 model. The VX54 will debut in 1992.

- In 1995, a minivan like the General Motors all-purpose vans will be built from Ford's DFC55 program, the platform replacement for the Taurus/Sable and Scorpio. The current rear-drive Aerostar will be dropped after 1995, giving Ford two front-drive passenger vans by 1996.

"That handles Ford's first priority to replace the Aerostar," the source said. Ford's major concern is that the current Aerostar, designed by truck designers, trails the Chrysler Motors minivans in popularity.

Ford's second priority is replacing its aging F-series pickup that is losing ground to GM's recently redesigned full-sized pickups.

The F-series replacement will arrive in 1996 with a full-sized conventional pickup fitted with a composite bed. Ford will begin testing composite material with the 1990½ Ranger, 10,000 of which will be fitted with a plastic box.

- In 1997, a full-sized Bronco will be pulled off this F-series replacement, and a Ranger pickup replacement will debut.

- A 1998 Bronco II is scheduled for introduction, as well as a replacement for Ford's full-sized Econoline and Club Wagon vans.

Ford's modular engines under development — which include a 2.4-liter four-cylinder, a 3.5-liter V-6 and a 4.6-liter V-8 — are expected to be built, contingent on fuel-economy standards set in Washington.

Plans call for compact vehicles to be fitted with both four- and six-cylinder powerplants while the larger vehicles will get V-6s and V-8s.

Ford will use its composite technology to engineer multiple pieces as a single unit. The process will substantially reduce Ford's manufacturing complexity.

Under the modularity plan, large sections of trucks will be shipped from suppliers as complete modules. Only final assembly will be required.

INCENTIVES

FROM PAGE 3

ing dealers a 5 percent carryover allowance on 1989 vehicles and "not doing this huge substitute for it."

Chrysler told its Jeep-Eagle dealers that it will not offer a carryover allowance for 1989 models but it plans to keep its dealers competitive with rebates on carryover models.

A Ford Motor Co. spokesman said a carryover allowance or similar program is "under discussion." Ford did not say when it will make a decision on the carryover allowance issue.

One week after GM sweetened its incentive program, Ford put its Ford Crown Victoria, Mercury Grand Marquis and Ford Bronco into a rebate program that has no expiration date. Ford left intact its current incentive program, which ends July 31.

The new rebates are $1,000 on Crown Victoria and Grand Marquis and $750 on Bronco. Those models also have been added to the Red Carpet lease program. The program offers rates of 2.75 percent of the cost of the vehicle for up to 24 months or 8 percent of the cost of the vehicle for 25-, 36- or 48-month leases, minus a $300 rebate.

Other Ford Motor vehicles are in an incentive program offering a choice between rebates ranging from $300 to $4,000 and low-interest loans on selected vehicles and rebates only on other models.

Daihatsu America announced dealer incentives last week. The importer is offering dealers a $300-per-unit advertising allowance if they meet individual sales quotas, but nothing if they don't, said C.R. "Dick" Brown, executive vice president. The program ends Sept. 5.

Jaguar Cars has extended its $5,000 rebate offer for the purchase of a 1989 Jaguar to owners of 1986 Jaguar sedans.

Previously, Jaguar had offered the $5,000 deal only to owners of 1987 sedans who bought a new Jaguar. That offer expired July 10.

Owners of 1986 sedans have from Aug. 7 to Sept. 18 to take advantage of the offer.

The $5,000 rebate may be applied to the 1989 XJ6 or Vanden Plas sedans, or to the XJ-S coupe, but not to the XJ-S convertible.

Cars must be in dealer stock.

Porsche Cars North America is issuing cash certificates to dealers based on eligible vehicles in stock or ordered between July 1 and Sept. 30. The certificates can be redeemed for $3,000 to $6,000 when the vehicles are sold.

Eligible vehicles are 1988 924-S and 1988 and 1989 944, 944-S, 944-S2 and 944 Turbo models. Dealers must have had at least two new, unused eligible models in stock on July 1 to qualify. Certificates equal to 40 percent of the models in stock or ordered from Porsche during the period will be issued, subject to rounding.

Certificates are $3,000 for 924-S and 944, $5,000 for 944-S and 944-S2 and $6,000 for 944 Turbo.

Automotive News Staff Reporters Jim Henry and Jesse Snyder contributed to this report.

Cars reach four million, ahead of '88

By Karen Detkowski
SPECIAL CORRESPONDENT

U.S. automakers built their four-millionth car of the year last Monday, eight days ahead of 1988.

So far this year, 4,007,880 cars have been assembled, 2.34 percent more than the 3,916,220 completed at this point last year.

Last week's scheduled car output of 83,488 was 49.25 percent above the previous week's 55,937, when all Ford Motor Co. plants were closed for vacation, but it was 11.17 percent below the year-ago week's 93,984.

Companies split last week's estimated output as follows:

General Motors, 35.79 percent; Ford Motor Co., 31.60 percent; Honda of America Manufacturing, 9.11 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 5.06 percent; New United Motor Manufacturing Inc., 4.79 percent; Toyota Motor Manufacturing U.S.A., 4.26 percent; Chrysler Motors, 4.07 percent; Nissan Motor Manufacturing Co. U.S.A., 2.90 percent; and Diamond-Star Motors, 2.42 percent.

Truck production was scheduled at 70,387 units last week, 81.15 percent above the previous week's 38,855 and 77.20 percent above the year-ago week's 39,721.

Year-to-date, 2,439,417 trucks have been built, 7.56 percent more than the 2,267,936 assembled last year at this time.

Last Thursday, GM's Orion Township, Mich., plant began output of the 1990 Cadillac DeVille and Oldsmobile 98 Regency.

Also beginning 1990 production were GM plants in Doraville, Ga., which assembles Oldsmobile Cutlass Supreme, and Kansas City, Mo., which builds Pontiac Grand Prix.

GM's Arlington, Texas, and Linden, N.J., plants are closed for changeover until Aug. 9 and 14, respectively. The Van Nuys, Calif., and Lakewood, Ga., plants go down next week. Van Nuys will reopen Aug. 11; Lakewood, Aug. 21.

GM's Framingham, Mass., facility will close indefinitely July 28.

Ford Motor Co. will idle its Edison, N.J., assembly plant this week and next week because of high inventories of Ford Escorts. Ford's Chicago assembly plant resumes output of Taurus and Sable today. It was down a week because of high inventories.

Cars, trucks fall in Canada

With only five of 10 car and truck assembly plants open, last week's scheduled output in Canada fell below the prior week's total.

Car production was targeted at 12,487 units, 1.86 percent below the previous week's 12,723 but 45.74 percent above the year-ago week's 8,568.

Truck output was scheduled at 5,150 units last week, 20.12 percent below the prior week's 6,447 and 8.77 percent below the year-ago week's 5,645.

Toyota Motor Manufacturing Canada will close for vacation July 31 and is scheduled to resume operations Aug. 7.

Quality prize for LeSabre; sales double

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Thanks to J.D. Power and Associates and some aggressive promotion, the Buick LeSabre has rocketed out of showrooms in July.

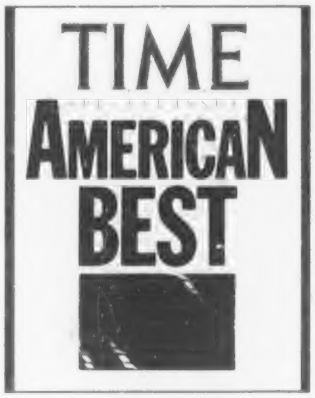
The LeSabre's ranking as the top domestic model in Power's June Initial Quality Survey helped Buick double last year's sales of LeSabre during the first two 10-day periods of July.

Car-truck sales rise 2 percent in mid-July, Page 41

In the 20 days, Buick sold 9,697 LeSabres, compared with 4,541 last year.

The upturn followed the July 1 release of the Power survey, which put LeSabre second to Nissan Maxima in overall quality. Before that, LeSabre sales trailed 1988.

"Customers are coming in with articles in their hands," said Tom Scerbo, owner of Scerbo Buick in Boonton, N.J.



Power-Time-LeSabre spells success.

The LeSabre has been selling so well recently that Buick will keep a second shift to build more front-wheel-drive LeSabres at Buick City in Flint, Mich. The second shift was added in March.

Summer sales have been bolstered by a LeSabre promotional piece that Buick put together for its 2,950 dealers.

On July 11, Buick mailed 300,000 four-page promotional pieces with a simulated red-bordered Time magazine cover featuring two print ads to herald LeSabre's standing in the J.D. Power survey. LeSabre catapulted from last year's 44th spot to the second most-trouble-free car

Chrysler battens hatches with $1 billion cutback

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Chrysler Corp., expecting a permanent change in the U.S. car market, last week announced a 15-month cost cutting program to trim $1 billion in fixed expenses by the end of 1990.

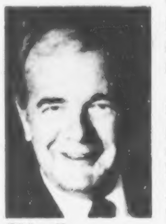
The cuts will not be in areas that affect product plans or customer satisfaction, the company said. Suppliers will be affected.

"We are intending to take a billion dollars out and keep it out and keep it ongoing, then go look for some more," said Bennett E. Bidwell, chairman of Chrysler Motors, following the announcement to 600 top executives.

"We got fat from 1984 to 1987," said Bidwell. "We didn't really go to work until after we bought AMC. And we should have done it earlier at Chrysler on our own," said Bidwell.

Chrysler believes that overcapacity, a soft market of only 14.2 million car and truck sales in 1990 and stiff competition will prolong the need for cost cutting, but General Motors and Ford Motor Co. said they planned no new cuts.

"Chrysler is going through some cost-containment programs that we have already implemented," said a GM spokesman.



Bidwell

In 1987 GM initiated a program to reduce costs by $10 billion by 1990. A year later, that goal was pushed to $12.5 to $13 billion, according to a company spokesman.

GM has reduced its salaried workers by 40,000 worldwide as a result of the effort. Its cost-cutting program already has reached $10 billion of its goal.

David McCammon, Ford vice president for finance and treasurer, said Ford has been preparing for the inevitable downturn through work force reductions and keeping its capacity tight. "We do not expect any major layoffs in salary or hourly" workers, nor any cut in spending programs, he said.

Both Ford and GM said they have no plans to lay off employees, but they said they continually evaluate staffing levels.

The first Chrysler cuts will come when it eliminates 2,300 white collar workers — or about 8 percent of its salaried workforce — in its Chrysler Motors subsidiary and corporate staffs over the next month and a half. The staff cuts could save the company $240 million a year — $100 million in head count reduction and $140 million in reduced in fringe benefits, overtime pay, temporary employees and other personnel costs.

Chrysler hopes about half of the personnel cuts will be achieved through early retirement packages and buyouts of employees 55 years old or older with at least 10 years experience. Special incentives will be offered to those employees over age 62. The remaining employees will be cut. Chrysler Corp. white collar ranks have grown from 20,000 in 1983 to 31,000.

Chrysler's 2,000 top executives are also being asked to voluntarily put into escrow a portion of their salary during the 15-month cost cutting period, which runs from October 1989 to the end of 1990. All participants in the program

Domestic cars offer more bang for the buck

Japanese quality still wins buyers

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

How much car can a family buy for $16,000 to $18,000? Do domestics or Japanese imports offer better values?

As two trends have converged — improved domestic quality and higher import prices — the scales may be tipping to the domestics, according to analysts and some multi-franchise dealers.

"The comparison is done on a model-by-model level, by people who stand there in the showroom and say 'You mean I can get a Buick LeSabre for the same price as this Mazda 626?' " said Bill Cook, a dealer based in Farmington Hills, Mich., who handles Buick, Mazda, Chrysler, Plymouth, Audi, Porsche and Volkswagen.

But as analyst Maryann Keller said, "There's a big element of subjectivity in value."

"If you take an objective measurement of price, content, size and engine displacement, you can calculate that domestics have a price advantage of $1,000 to $1,500," said Keller, of Furman Selz Mager Dietz & Birney, a New York brokerage house.

"But value also includes things like quality. And while the gap is narrower, Japanese cars are still higher quality. That's still a factor," she said.

AUTOMOTIVE NEWS/JOE WILSSENS

Family vehicles from the Big 3 and Japan jockey for marketing position in an Automotive News comparison. Page 44.

While several multi-franchise dealers report that buyers may be moving toward domestics, Japanese and transplant-built cars picked up three points of market share in the first half of 1989 com- [illegible] half of 1988. [illegible] ord Motor Co. gained in share, from 21.76 percent to 22.56 percent.

Dealer Cook points out that domestic automakers have dramatically improved product quality in recent years. Combined with pricing increases on Japanese imports since 1985, caused by strong appreciation of the yen, domestics have moved from a roughly even position to a clear advantage on price and from a big disadvantage to near-parity on quality, he said.

As an illustration, Automotive News looked at a dozen represen-

Incentives hurt quarterly profit at GM and Ford

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

Expensive incentive programs and slow sales reduced second-quarter profits for General Motors and Ford Motor Co.

Ironically, incentives meant higher volume for the captive finance arms, but rising borrowing costs in a competitive market caused Ford Motor Credit Co. and General Motors Acceptance Corp. to lend money at thin margins, and their profits took a big hit.

GMAC second-quarter profits were off $65.3 million while earnings from Ford's financial services group dropped $42.8 million.

GM's non-automotive subsidiaries contributed 42 percent of second-quarter earnings this year and 41 percent a year ago. Ford's accounted for 12 percent in the second quarter and 13 percent in the year-ago period.

Ford's second-quarter profits of

Peugeot's new luxury model was styled by Pininfarina.

Peugeot's flagship set for Frankfurt debut, U.S. sale

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

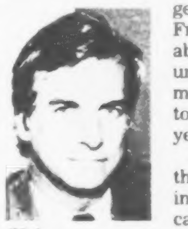
PARIS — Peugeot will show its long-awaited, luxury flagship at September's Frankfurt auto show.

The new Peugeot, which has been variously called the 705 or 605 by sources, is due to be unveiled to dealers Sept. 5.

Sales in France will start in October, and major export markets in Europe will receive the car in the second quarter of 1990.

And despite rumors that the car may not be sold in the United States, Peugeot is looking at a U.S. introduction in late 1990 at the earliest, though perhaps not until the middle of 1991, according to Victor Dial, marketing director for Automobiles Peugeot.

The alleged hesitancy has been pinned to the poor sales of the compact 405 since its American introduction last fall.



Dial

"I'd like to be doing better in the United States," said Dial. "But our intention is to bring it into the United States."

Peugeot sales in the United States dipped to 6,712 last year, down from 9,422 in 1987 and a peak of 20,007 in 1984. Peugeot had hoped to return to 20,000 this year, but six-month sales were only 3,067.

Dial, who oversees the U.S. sales effort, said Peugeot doesn't plan to abandon the American market.

"Basically, it's not so much a problem of the 405 as it is Peugeot in general," he said. "When you're so small, you have no visibility and you're not on anyone's list."

The sales problems of the 405 will not be a factor in the timing of the U.S. debut for the big car.

"It's really not possible to bring it forward," Dial said.

While Dial confirmed that the car will be at Frankfurt, the company has released no technical details and hasn't even confirmed the name of the car.

But the Pininfarina-bodied, front-wheel-drive model reportedly will be launched in four editions, ranging from a a 1.9-liter four-cylinder base model to a flagship with a 24-valve 3-liter powerplant — one of two V-6 offerings.

"It's a small segment and we're shooting for 100,000 cars a year," said Dial. "It's completing our range and hopefully should be a good profit car."

The car will be built at Peugeot's plant in Sochaux in eastern France. Dial said production probably won't reach the 100,000 level until 1991. The 505 last achieved more than 100,000 in 1986, falling to 69,000 in 1987 and 45,000 last year.

In keeping with past practices, the 505 will remain in production in limited volume after the larger car is introduced. Its assembly will be shifted to several smaller Peugeot plants throughout France.

Peugeot S.A. will bring out the new model just after its May introduction of the new Citroen XM, which shares platform components and engines with the new car. But there are notable contrasts, not the least of which is the appearance.

Styling of the Peugeot is markedly different from the Bertone-

Jeep-Eagle may get awd minivan

Chrysler must predict total·segment as it mulls plans this week

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Chrysler Motors is considering an all-wheel-drive version of its next-generation minivan and a car priced under $6,000 for its Jeep-Eagle Division as part of the 1990s product lineup.

Chrysler officials told Automotive News last week the fate of the all-wheel-drive minivan should be decided in 30 to 60 days and the vehicle, if approved, could arrive in Eagle showrooms as soon as 1991. Chrysler officials say 1992 is a more realistic target.

Interior and exterior designs of the Eagle minivan are complete, and Chrysler management will review plans for the vehicle this week, according to Ed Brust, Eagle general product manager.

According to written responses by Chrysler to Jeep-Eagle Dealer Council recommendations at its summer dealer meeting in May, an Eagle minivan will be offered only "if the Chrysler-Plymouth and Dodge dealers do not sell out Chrysler's capacity."

The model would be a seven-passenger, short-wheelbase minivan with standard all-wheel drive. No two-wheel-drive versions of the Eagle van are planned. Eagle would share the awd van with Dodge and Plymouth, though Eagle officials want to develop awd as a niche for the division.

"If there were an Eagle (minivan), it would be great to let us have all-wheel-drive exclusivity for the first six months or the first year or whatever, then let Plymouth and Dodge carry forward with that functional hardware," said Brust.

Austrian 4wd specialist Steyr-Daimler-Puch is expected to provide Chrysler with the technology for the awd minivan. The Austrian firm said it plans to open a Detroit engineering office in 1989.

The Eagle minivan proposal has raised the question of whether another Chrysler Motors minivan would cannibalize business from Plymouth and Dodge, which already sell minivans as fast as the Windsor, Ontario; and St. Louis (No. 2), plants can build them.

"You've either got to increase capacity at Windsor, St. Louis or another source or believe that the market is going to get so intense with competition that maybe there will be some more capacity and you could slide it in," said Brust.

"That's what we're struggling with internally. How do you want to vote? It's not an easy call," he said.

Chrysler faces intense competition in the compact van market that could threaten the company's current 51 percent share of that category. Brust said Chrysler's minivan competition will be Chevrolet Lumina, Oldsmobile Silhouette, Pontiac Trans Sport, Mazda MPV and the minivan that will be built by a joint venture of Ford Motor Co. and Nissan in Avon Lake, Ohio.

If the Eagle minivan is approved, all four Chrysler

Chrysler talks vans with Chausson, Steyr

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler plans European output of Plymouth Voyager.

FRANKFURT, West Germany — Chrysler Motors is eyeing surplus capacity at two specialty manufacturers in France and Austria as it prepares to begin minivan production in Europe.

The U.S. automaker, which resumed sales in Europe last year after a 10-year absence, is talking with Usines Chausson S.A. of France and Steyr-Daimler-Puch of Austria about subcontracting assembly of the Plymouth Voyager at the manufacturers' facilities, according to sources at one of the specialty makers.

Chrysler is expected to choose one or the other by this fall.

In Graz, Austria, Steyr builds the Mercedes Gelaendewagon off-road vehicle, the Pinzgauer luxury off-roader and the four-wheel-drive Volkswagen Transporter Syncro, which is sold in the United States as the Vanagon Syncro.

Production at Graz has been 20,000 to 30,000 units in recent years, though company officials have said 50,000 is attainable with some added investment.

Sources say the Austrian government is prepared to offer Chrysler lavish incentives to put minivan production into Graz. Steyr, which has long been beset by financial troubles, is a subsidiary of Creditanstalt Bankverein, Austria's largest bank and industrial holding company. The Austrian government owns 60 percent of Creditanstalt.

Chausson has excess capacity at its plant in Creil, France, north of Paris, which produces 100 Peugeot 205 subcompacts, 200 Renault Trafic vans and 60 504 pickups per day. Creil could build another 200 vehicles per day — about 40,000 annually.

Chrysler has relationships with both companies. Steyr is known to have participated in engineering a forthcoming 4wd version of the Chrysler minivan. Chausson is co-owned by Peugeot and Renault, which two years ago sold American Motors to Chrysler and will produce the Jeep JJ in Europe with Chrysler.

Chausson is believed to have been one of the alternatives for European production of the Jeep JJ. But the partners are now understood to favor sites in either Vallodolid, Spain, or Setubal, Portugal.

Chausson has had difficulties in recent years as aging Renault and Peugeot models that were moved to Chausson plants have been discontinued.

Earlier this year, Chrysler ruled out addition of a third minivan plant in North America. But Chrysler sources in Europe have said that the company is intent on having a joint European manufacturing base beyond the Jeep JJ plant with Renault.

Rough Riders blame rebates for falling profits

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

Auto dealers fired a new round of protests at carmakers last week by charging that customer rebates are contributing to a "nationwide decline in dealership profitability."

The Rough Riders — a dealer action committee formed earlier this year by Ron Tonkin, president of the National Automobile Dealers Association — charged that manufacturer rebates to consumers are confounding the retail market and dampening national auto sales.

In a letter mailed last week to NADA's 20,000 dealer-members, the Rough Riders' steering committee spelled out its agenda for the balance of the year. At the top of the list is a call for carmakers to stop offering factory rebates to buyers and, instead, to pass them directly to dealers.

"These rebate programs are doing more harm than good," said Bob Baker, Rough Riders' chairman and San Diego multi-dealer. "The carmakers should leave their incentive and APR (annual-percentage-rate financing) programs in the hands of their dealers. We're the ones with the inventories to worry about."

The letter said direct rebates cloud the credit application process and increase the incidence of loan default.

Rebates and discount financing have become industry fixtures in the late 1980s. This year's programs, in the face of a soft and highly competitive market, have been especially aggressive.

The committee charged that the direct rebate programs have damaged dealers' ability to make finance and insurance sales, chased many non-factory finance sources out of the market, and interfered with dealers' ability to move their used-car inventories.

Recent production costs and extended plant closings stem from declining dealer demand, Baker said. "We're not ordering the cars because we're afraid we can't sell what we already have. And we can't sell them because of these factory rebate programs.

A GM spokeswoman said that last month the company responded to dealer concerns by offering consumer rebates and a dealer incentive program. That program, which is designed to clear out year-end inventory, offers between $300 and $1,000 per vehicle when dealers reach various sales targets.

Baker said GM has been more receptive to some dealer ideas than other manufacturers.

The communique was muted in comparison to earlier Rough Rider calls to arms. Baker said the car manufacturers seem open to addressing the problems.

He noted that the group, along with NADA's industry relations committee that it serves, has already won a commitment from GM to discuss future franchise changes with NADA before implementing them.

He also said the Rough Riders make an effort to consider the factories' side of issues.

Also on the list of Rough Rider concerns mailed to dealers were restrictive rules for selling dealerships and factory pricing policies for miscellaneous business expenses.

In addition, the group took issue with factories for subsidizing fleet sales to rental-car companies. The dealers said the practice is resulting in a glut of used cars and hurts dealers' own used-car sales.

Did Kentucky overpay for Toyota?

State and outsiders have different views of incentive package

By Georgina Fiordalisi
CRAIN NEWS SERVICE

Kentucky won a valuable prize when it wooed Toyota to Bluegrass Country, but it may have paid too high a price.

The state admits to a $125 million incentive package approved by the legislature, but additional expenditures mean Kentucky paid at least $325 million — perhaps the largest U.S. auto-plant deal so far — for its Toyota plant in Georgetown.

The state and the University of Kentucky say the arrangement, negotiated four years ago, has triggered developments that so far have pumped $1.9 billion into the local economy. But one expert sees a downside, too: It will be 20 years before the investment in Toyota is returned in taxes to the state's general fund.

The deal so far has provided 2,800 jobs with the promise of 700 more. But in the fever of the chase, Kentucky leaders did not realize that they might have won a Japanese auto plant with far fewer incentives.

When Kentucky was negotiating with Toyota in 1985, state officials believed they faced stiff competition from Ohio, Tennessee and Indiana. But in reality, competition may have been minimal.

Conventional wisdom dictates that Ohio and Tennessee probably were out of the running from the beginning, because they already had Japanese plants: Ohio had the Honda plant and Tennessee the Nissan plant. At that time, the Japanese were eager to gain political clout among the states and wanted to spread their wealth around, said Douglas P. Woodward, co-author of "The New Competitors," a book about the heyday of foreign investment in the United States.

"The Japanese were going to locate in this part of the world for something other than incentives," said Jerry Hammond, executive secretary-treasurer for the Kentucky State Building & Construction Trades Council, which opposed the Toyota deal from the start. "But we (Kentucky) didn't know when to stop giving incentives."

At the time, Kentucky was eager for new business and was willing to pay for it. Its traditional industries — horse breeding, mining and tobacco farming — were suffering.

Despite its high price, the deal had redeeming features. Of the $325 million incentive package Kentucky offered, $68 million paid for job training and $40 million paid for roads and sewers to serve the new plant.

"That $68 million wasn't spent on Toyota, it was spent on Kentucky," said Cary W. Blankenship, who was deputy secretary of commerce for the state when the deal was negotiated. "We wanted to make sure that our residents had the capability and training. We were giving them life skills."

As for the infrastructure, Blankenship said that is owned by the state. "How do you make the determination that a road is built for the benefit of one corporation?" he asked.

Of the remainder, the state spent about $49 million to buy the 1,500-acre site for the plant and to carry out other capital improvements and at least $167.6 million to pay the interest cost on the debt.

Now that the deal is done, the question remains: Will Kentucky get its money back?

During the next 20 years, Kentucky will collect only $267.5 million in property, sales and income taxes related to Toyota and the people employed there, according to estimates by Larry Ledebur, visiting senior fellow at the University of South Carolina in Columbia, S.C., an expert on economic development who worked for the Urban Institute in Washington and on a White House study of economic development during the Carter administration.

If inflation is considered, the state will break even on the investment at the end of the 20-year period.

But the University of Kentucky disagrees with those calculations, saying the state will have collected $632.6 million in taxes after 20 years. That includes taxes paid by the $3.7 billion worth of related business that the university expects to come to Kentucky by 1990.

In its calculation, the university used an economic multiplier — a factor that accounts for the repeated turnover of money in the form of jobs and sales — that Ledebur says was too large.

The university used a multiplier as high as 11, Ledebur said, and most economists won't go over two. "No economist would use as high a multiplier as they did," he said.

But Kentucky leaders use business expansion, rather than tax revenue, as justification for the cost of the deal.

The Toyota plant now employs 2,800 people, but Toyota has announced a 700-job expansion by the end of 1990.

That brings the Japanese investment in Kentucky — 48 manufacturing plants with a total employment of 11,297 — up to $1.9 billion in value, said the Kentucky Cabinet for Economic Development.

"When Toyota paid attention to Kentucky and chose the site, the other corporations found us," said Martha Layne Collins, the former governor of Kentucky who negotiated the deal.

GM passive belts fail user-choice test

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

VEHICLES INVOLVED IN NHTSA BELT COMFORT TEST:

Two-point motorized belts:
- Dodge Shadow
- Ford Escort
- Ford Tempo
- Mazda 626
- Mitsubishi Mirage
- Nissan Maxima
- Peugeot 405-S
- Saab 900 Turbo
- Toyota Camry

Two-point non-motorized:
- Hyundai Excel GLS
- Volkswagen Jetta
- Yugo GV

Three-pointed non-motorized:
- Chevrolet Beretta
- Pontiac Bonneville
- Pontiac Grand Am
- Pontiac Grand Prix

WASHINGTON — General Motors' automatic three-point shoulder and lap safety belts are the most uncomfortable and inconvenient passive-restraint system, according to an NHTSA study.

Participants in the survey said the belts were uncomfortable and made getting in and out of cars difficult. That may explain why only 77 percent of the drivers queried in an earlier survey use the GM automatic system — the lowest use rate of the three types of automatic belts on the market, NHTSA said.

Two other passive shoulder belt systems also were tested. They are two-point types with the automatic part fixed at one point above the left shoulder and the other down by the right hip on the driver's side. One of those systems is motorized, the other is not. The driver must fasten a lap belt manually on the motorized system while the non-motorized system used on three models tested uses a knee bolster instead of a lap belt.

In the earlier usage study, 97 percent of the survey respondents use the motorized belt, while usage was 80 percent among those with cars equipped with non-motorized systems.

The agency does not mandate what type of belt manufacturers use. But NHTSA studied the belts because driver usage is dependent on comfort and "maybe the manufacturers will do something with this data," said James Hedlund, the agency's director of driver and pedestrian research.

In the latest study of comfort and ease of use, 17 models with the three types of belts were used.

NHSTA paid 120 volunteers of varied sizes, male and female, to rate the shoulder and lap belts and knee bolster for convenience, fit, comfort, ease of entry and exit, and tested whether the shoulder belt retractor worked.

"We found the differences between belt systems were more important than the difference between cars," Hedlund said.

The biggest problem cited by 82 percent of the subjects was entering and exiting the GM cars with the three-point belt. Only 15 percent complained about entry and exiting with the two-point motorized belts and 37 percent complained about the two-point non-motorized belts.

The second biggest complaint was seat-belt inconvenience — including obscured vision by the shoulder belts and difficulties buckling and unbuckling the emergency release — by 67 percent of the subjects for the GM belt; 46 percent for the two-point non-motorized belt and 41 percent for the two-point motorized belt.

Generally, most of the complaints — regardless of the belt — were made by women who were short or overweight, or both. A universal complaint regardless of size and age was that the GM belts were hard to get in and out of.

Hedlund said the high percentage of short, overweight women experiencing problems with the belts came as no surprise because seat belts are made to fit "a normal-sized person."

But NHTSA is concerned with the comfort of the devices and test data will be made available to manufacturers, he said. GM said it has not seen the study. Hedlund said GM experts were present at a government and industry meeting earlier this month in Ann Arbor, Mich., where the survey results were presented.

Almost-Yugo father has new idea

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — The dealer who had the U.S. rights for Yugo before Malcolm Bricklin plans to assemble small luxury cars from imported Fiat-engineered parts.

Miroslav Kefurt, a North Hollywood Bertone dealer who also is known as a restorer of Honda 600s, hopes to start selling cars under the ItalUSA label by late 1990 or early 1991. He plans to start recruiting dealers late this year.

The first model, tentatively called Uno Turbo, bears a strong resemblance to the Fiat Uno subcompact sold in Europe. With anti-lock brakes, 16-channel stereo, remote car alarm, suede interior, celluar telephone and other luxury touches not available on the Fiat, it would sell for $15,000 to $17,000, Kefurt said.

He plans to keep volume at 5,000 to 10,000 annually, even as up to four models are added.

Kefurt's strategy is that of his MIK Automotive Co., which sells Bertone X 1/9s and remanufactured Honda 600s: unusual cars sold with high margins in markets that value distinctiveness, letting the market set the volume.

The plan is similar to one Kefurt originally had for Yugo. He had an exclusive U.S. import contract for 5,000 units a year from Yugoslavian automaker Zavoda Crvena Zastava, but Bricklin bought him out and used more of a mass-market business plan.

Kefurt is minimizing engineering and development costs by using parts imported from the Yugoslavian automaker, other Eastern European makers that also produce vehicles based on Fiat technology, their suppliers and Western European parts firms that make Fiat replacement parts.

Kefurt's original plan of sourcing chassis and powertrain from Fiat in Italy and having assembly done by veteran Fiat associate coachbuilders Bertone and Moretti collapsed last month when he traveled to Italy to close the deal.

A Fiat spokesman said Fiat has no plans to return to the U.S. market under the Fiat label. Fiat will not supply Kefurt with components or assistance or encourage any of its associates to do so because it does not wish to muddy the U.S. waters for either Ferrari, which Fiat now controls, or Alfa Romeo, which Fiat acquired last year, the spokesman said.

Kefurt intends to import parts for what amounts to a knockdown kit and assemble the cars in California, using his Honda reassembly team as a base.

He said private investors, mostly Japanese and Californian, have stuck with him despite the changes and the delayed startup. He said he has invested $300,000 so far.

Kefurt said one major hurdle is meeting U.S. government safety, emissions and mileage regulations. But he hopes to scale that hurdle by sourcing his first engines directly from Zastava and using emissions and mileage data already derived for Yugo. Crash testing and other government compliance work will be handled by a U.S. firm, he said.

ItalUSA will source locally tires and glass that meet Department of Transportation specifications, he said.

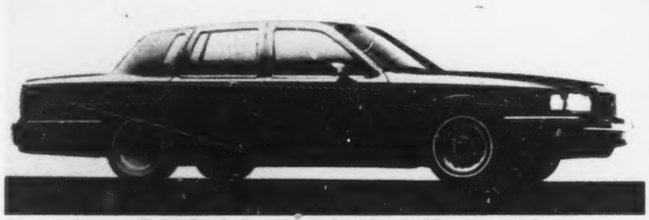
"Essentially what we're doing is using combinations of Fiat parts not sold in Europe," Kefurt said. "These are all off-the-shelf components, but the interior is upgraded and there are some luxury touches to appeal to a more upscale market here."

If the ItalUSA Uno Turbo sells well enough, Kefurt said the next model would probably be loosely based on the Fiat Tipo. Other potential designs include a fiberglass-bodied Lamborghini-style two-seater using a Bertone X 1/9 chassis and a tiny sport-utility aimed at resort operators. It would have a tubular steel frame, a fiberglass body and a Fiat drivetrain.

Kefurt said he hopes eventually to sell 5,000 to 10,000 units a year, but his break-even point is at a much lower volume. He intends to keep first-year production at no more than 10 a day, or about 2,000 a year.

ItalUSA will start recruiting a small number of dealers in metropolitan markets by the end of this year, Kefurt said. He is seeking established dealers who specialize in imported cars, in markets where offbeat, distinctive cars sell well.

Kefurt said he will probably seek a $50,000 dealer fee, which would cover parts, signage and initial advertising contribution.



Driving the new Town Car is homework for Lincoln-Mercury employees.

TESTERS: *L-M workers report on 1990 Town Car*

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Ford Motor Co. employees are taking work home at night.

Lincoln-Mercury Division is handing over keys of 200 new Town Cars every day to various employees, from secretaries to company vice presidents.

Their job is to drive those Town Cars a minimum of 50 miles and report on likes and dislikes in a one-page survey.

Employee evaluation of cars is new for Ford. In the past, the company has placed such vehicles as Continentals, Thunderbirds and Cougars in rental fleets to raise consumer awareness and to expose quality problems before the cars arrive in showrooms. General Motors and Chrysler Motors use rental fleets for similar purposes.

Ford feels using its employees to test drive the 1990 cars gives it the same evaluative results and provides greater control and increased access to the information.

"This is not to say we are not going back to the rental fleets — because we have had very good responses with them, particularly with the Continental," a Ford spokesman said. "But now we have a couple of different ways of evaluating the cars before sale."

Ford believes raising customer awareness with the new Town Car will be no problem, based primarily on its reception when it debuted at the Chicago auto show last February. L-M plans a traditional Town Car introduction in early October.

The employee testing, which began in May and is scheduled to end in September, will expose the Town Car to nearly two million miles of driving.

A Ford spokesman said positive comments on the Town Car have centered on its driveability, its interior roominess and its large trunk capacity. He declined to elaborate on negative comments.

The new Town Car has not been priced, but it probably will be below the Continental. Prices of the 1989 Town Cars range from $25,562 to $29,709. The Continental range is $28,430 to $30,353.

Car, truck sales post gains in Canada

By Bill Vance
SPECIAL CORRESPONDENT

TORONTO — Despite continuing gloomy predictions, total car and truck sales in Canada increased 1.85 percent in May. Ford of Canada and General Motors of Canada posted record truck sales.

GM had an all-time record month, selling 21,011 imported and domestic trucks and vans. Ford's truck sales of 15,213 were a record for May, up 0.55 percent from last year's 15,130.

Chrysler Motors' 12,571 domestic and imported truck sales were off 2.59 percent from last year's 12,905. Total imported truck sales were up 31.44 percent over last year; the domestic-import count rose 4.80 percent.

On the domestic passenger-car front, GM suffered the worst, although its monthly sales were down only 4.40 percent. Favorable finance terms probably averted a larger downturn. William Atkinson, vice president of sales, service and marketing, said, "We've had two solid months of sales in April and May and undoubtedly our 9.9 percent financing program contributed to these results."

At Ford, domestic car sales were up 141 units, from 23,083 to 23,224. Chrysler's domestic-car sales were down 543 units, from 16,801 to 16,258.

Overall, domestic car sales dipped 1.20 percent compared with May 1988.

Imported-car sales enjoyed a 4.53 percent increase over a year ago. Toyota was up 44.15 percent. Losers among the major importers included Volkswagen, down 27.66 percent; Hyundai, down 25.17 percent; and Nissan, down 22.90 percent.

LeSABRE

FROM PAGE 1

behind the Nissan Maxima.

Nissan is also hailing J.D. Power's ratings in its advertising, and Honda's Acura Division has heavily advertised its rating atop the J.D. Power customer satisfaction survey. *Acura does not report 10-day sales; Nissan reports them only for the U.S.-built Sentra and pickup trucks.*

Buick's merchandising pieces, developed by McCann-Erickson and Time Inc., supported national print ads running in newsweeklies like Time, Newsweek and Forbes and national newspapers, according to J.W. "Jay" Qualman, Buick general director of advertising.

Dave Power, president of J.D. Power and Associates, said he doesn't object to use of his surveys "as long as it lives within the spirit of the survey."

"It raises customer expectations, so manufacturers that do use it have to stand by it the following year and the year after that," Power said. "So it puts pressure on the manufacturers that do use those findings to keep working on satisfying the customer."

Each Buick dealer received 50 to 100 of the special pieces heralding the J.D. Power ranking.

"We've received special requests from dealers for several thousand pieces," Qualman said. "Initially, they were for dealers to use in the showroom. Some have been more innovative and are mailing them to prospects."

LeSabre sales have not peaked, according to dealers randomly surveyed by Automotive News last week. In the most recent 10-day sales period, LeSabre deliveries totaled 5,516 compared to 2,716 last year.

"There's no question that the J.D. Power survey has helped," said Regis P. McGuire, president of Polkowitz Motors in Perth Amboy, N.J.

When Buick sent out the promotional piece, sales got even better, dealers said.

"Buick was smart to send out those stacks of Time cover facsimiles to dealerships. Since it came out, we've seen a slight increase in sales," said Jim Fitzpatrick, sales manager at McNamara Buick-Pontiac in Port Jefferson, N.Y.

Paul Supples, sales manager at Dickinson Buick-Dodge in Fayetteville, N.C., said, "Several customers were thinking of an unnamed model, and they decided to check out LeSabre. People are picking up the Time insert along with the brochure."

Incentives and talk of Buick as the top domestically built make have helped sell LeSabres for Jim Corwin Buick-Isuzu in Fargo, N.D.

"Most of our customers are aware of the J.D. Power rating. If not, we've instructed our sales people to mention it when they are demonstrating a car," said Ken Cox, new-car sales manager.

In calendar 1989, LeSabre sales have improved each month since January. But total deliveries remain 8.49 percent behind 1988 sales.

Most Buick dealers said LeSabre sales accounted for 20 percent to 35 percent of their recent Buick sales, which is somewhat higher than before the survey came out.

Stocks are still fairly fat, some dealers say.

"Do we have enough inventory? That's the understatement of the year. Recent changes haven't helped that much," one dealer noted. Another said that the J.D. Power survey results helped sales, but his store still had 55 LeSabres in stock — more than he wanted.

Transplants, trucks boost vehicle sales in mid-July

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

The strength of transplant car sales and improved light-truck deliveries propelled mid-July's combined sales of U.S.-built cars and light trucks to a year-to-year gain of 2.33 percent.

General Motors and Ford Motor Co. reported slim increases in combined car and light-truck sales for the 10-day period. Cars were down, but trucks brought an overall gain.

Strong sales of U.S.-built trucks only partially offset car-sales losses for Chrysler Motors and Nissan in the July 11-20 period.

Conversely, sales of U.S.-built Toyota Corollas and Camrys more than tripled; Honda car sales doubled and Mazda car sales nearly doubled.

"It's kind of a cliche, but 10-day sales jump around a lot. The underlying trend in sales is down. We're definitely entering some cyclical weakness," said Michael Luckey of Luckey Consulting Group in Cresskill, N.J.

He attributed the slight improvement in overall 10-day sales to general incentive awareness.

In the July 11-20 period, deliveries of U.S.-built vehicles inched up 2.33 percent to 358,988 from 350,804 last year.

There were nine selling days in the period both years.

The eight U.S. carmakers sold 221,231 cars, up 1.51 percent from 217,941 in mid-July last year. Only Toyota, Honda and Mazda reported year-to-year rises.

Light trucks sold at a faster pace in mid-July. All four domestic truckmakers reported sales gains. The light-truck total was 137,757, up 3.68 percent from 132,863 last year.

Chrysler Motors' car sales dipped 18.48 percent while Ford Motor and GM reported much slimmer losses.

Although Ford Motor delivered 2.41 percent fewer cars in the mid-July period, Festiva, Mustang and Probe sales were strong, and Lincoln sales rose 25.21 percent. All were helped by rebates.

GM's decline of 1.39 in car sales was the smallest among the Big 3. Buick and Pontiac were up; Chevrolet, Oldsmobile and Cadillac were down.

Nissan, off 14.07 percent, was the only transplant carmaker to report a year-to-year decline in car sales.

OBITUARIES

John Eckhold

CHARLEVOIX, Mich. — John Eckhold, 71, retired director of automobile safety and research for Ford Motor Co., died July 24. He joined Ford shortly after World War II and retired in 1979.

Reginald J. Nicholas

BIRMINGHAM, Mich. — Reginald J. Nicholas, 88, former comptroller for Pontiac, died July 24. He held several other administrative posts during his 43 years with General Motors.

Thomas J. Carroll

BIRMINGHAM, Mich. — Thomas J. Carroll, 69, retired director of special studies for worldwide product planning at General Motors, died July 23. He worked at GM from 1949 until 1981.

Gordon Reihl

BRANFORD, Conn. — Gordon Reihl, 37, marketing manager for Accel Performance, a marketing unit of Echlin Inc., died June 14.

GM idles 2 and retires Framingham

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

Last week, General Motors shut two plants due to material shortages and closed one permanently.

The Fairfax, Kan., and Doraville, Ga., plants, which had just resumed output July 17 after model changeover shutdowns, were idled due to a material shortage.

Doraville assembles Oldsmobile Cutlass Supreme, which had a 114-day supply on July 1; Fairfax builds Pontiac Grand Prix, which had a 131-day supply.

One of GM's A-body assembly plants was closed permanently last week. The Framingham, Mass., facility built its final car last Friday, leaving the Oklahoma City plant the sole U.S. plant building the Oldsmobile Cutlass Ciera and Buick Century. Ciera is also assembled at the GM of Canada plant in Oshawa, Ontario.

Domestic auto production is slowly rising to normal weekly levels as plants resume operations after model changeover downtime.

Last week's targeted build of 86,851 was 4.58 percent above the prior week's 83,044 and 19.73 percent more than last year's 72,541.

Last week's estimated car output was shared as follows:

Ford Motor Co., 37.55 percent; GM, 27.92 percent; Honda of America Manufacturing, 8.72 percent; Chrysler Motors, 6.10 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 4.90 percent; New United Motor Manufacturing Inc., 4.61 percent; Toyota Motor Manufacturing U.S.A., 4.15 percent; Nissan Motor Manufacturing Co. U.S.A., 3.72 percent; Diamond-Star Motors, 2.33 percent.

Truck production last week was reduced by two Ford plants idled due to slow sales and model changeover downtime at Chrysler and GM. The industry scheduled 65,335 trucks last week, 11.08 percent below the 73,479 completed the previous week and 9.55 percent below the same week last year when 72,234 trucks were built.

As reported earlier, Ford's Twin Cities, Minn.; and Louisville, Ky., truck plants and its Edison, N.J., car plant are closed because of sluggish sales. All three are expected to resume output Aug. 7.

Canada increase paced by Ford

Canadian car and truck output rose last week as Ford resumed production at two plants.

Auto production was scheduled at 17,673 units last week, 46.05 percent more than the prior week's 12,101 and 84.54 percent more than the year-ago week's 9,577.

Truck output was targeted at 8,760 last week, 60.29 percent more than the previous week's 5,465 and 2.18 percent above the year-ago week's 8,573.

Ford's Oakville, Ontario, truck plant and its St. Thomas, Ontario, car plant resumed operations last week after model changeover.

Navistar's truck plant in Chatham, Ontario, also resumed output last week.

Credit unions fight for lost loan share

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

With Ralph Nader's blessing and the help of syndicated consumer auto writer Remar Sutton, credit unions have mounted an aggressive campaign to regain auto financing market share.

The targets of the campaign are those sources making retail new-car loans through dealers — banks and captive finance arms.

A credit union brochure advertising the Chicago conference that kicked off the campaign last week accuses captive finance arms of using "pressure, deception and confusion" on car buyers.

The campaign, sponsored by the Credit Union National Association, will help credit unions install "an auto adviser service and auto library" to give members information on car buying, auto safety and other matters.

It is the credit unions' first large-scale assault on dealers' finance and insurance operations, their major profit center. The credit unions blame special-rate financing — such as the annual percentage rate incentives — for the decline of their market share.

Executives of captive finance arms say they respect credit unions as competitors.

But J.E. Farrell, president of Chrysler Credit Corp., said credit unions will have to match banks' and finance companies' massive

Chevy overhauls Geo strategy

Perkins era fast off line

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Chevrolet has overhauled its Geo advertising campaign and its product strategy for the 1990 model year to give dealers the opportunity for higher volume and bigger profit margins.

The Geo change is but one major move J.C. "Jim" Perkins has made as Chevrolet general manager for the past three months.

Since taking over May 1, Perkins also has:

- Re-established a field organization so Chevrolet representatives call on dealers face to face.
- Set in motion a restructuring of product management to give program managers more clout.
- Elevated the role of motorsports within Chevrolet.

In an unusual move for General Motors, Perkins was lured back to Chevrolet after a four-year stint with Toyota.

Perkins said he and his staff have spent substantial time on Geo marketing and product plans and where Geo is headed. Geo is Chevrolet's line of vehicles imported from GM's Japanese partners and built through joint ventures.

Chevrolet wouldn't provide details about the new ad campaign. It will be unveiled to dealers next week.

For the 1990 model year, Perkins said Geo's model lineup will "have

Sales climate chills mall fever

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

Declining new car sales and tough local zoning issues are quashing plans for auto malls and parks in parts of the country.

Once touted as one of the hottest retailing concepts of the '80s, multi-dealer retail centers have been shelved in several markets — at least until the sales outlook improves. First half U.S. car sales were down nearly 400,000 units to 5.1 million from a year ago.

A number of large dealers have had to abandon mall development plans or put them on back burners. Projects have hit snags in Maine, New York, Florida, Tennessee, Massachusetts and other states.

Auto retailing centers sprang up in part because of their ability to provide shoppers with a wide range of choices in one centralized complex. Also fueling the trend toward many makes under one roof is the evolution of megadealers with multiple franchises.

Enclosed auto malls frequently are controlled by one dealer with different lines, while open-air auto parks typically bring

Early bird strategy

Tommy Friedkin's Westside Lexus in Houston got the first of 1,000 cars shipped to 29 dealers last week, and Tiffany Kendall looks them over. Infiniti is also trying to round up early sales. Stories, Page 6.

Transplants sort out labor's role

Japanese are used to unions, but not U.S.-style unionism

As U.S. transplant operations of the Japanese manufacturers come on stream, labor itself is seeking to redefine its role in a manufacturing process that is different than traditional Big 3 practices.

Based on the concept of teamwork, some have taken it to mean that unions are not needed in the Japanese system, as is the case with the recent union vote taken at Nissan Motor Manufacturing.

But both Japanese managers and labor experts say that while Japan thrives on consensus management, that doesn't mean there is no tension between workers and those who lead them.

"American people always say that we have no unions in Japan so we have no experience managing or negotiating with union people," says Yoichi Nakane, president and chief executive officer at Diamond-Star Motors, the Illinois joint venture between Chrysler Motors and Mitsubsihi Motors Corp.

"But that's not true," he said. "We have unions in Japan and their demands are the same, like environmental issues or wage increases. But in Japan, our attitude is that management should consider associates as human beings and an asset to the company. That attitude should help us resolve any problems we have in the future."

Professor Shozo Inoue of Hiroshima University said semantics sometimes disguise that tension. He said Japanese managers often emphasize "harmony" and "cooperation." And collaboration between workers and management may be seen by U.S. union forces as capitulation.

As a result, some American workers may look at the Japanese message of "harmony" at the transplants with deep suspicion.

Likewise, American managers looking across town at the Japanese setup may want to imitate the Japanese, but for the wrong reason. Inoue said he has visited U.S. firms where managers expressed

Ford ups rebates, watches GM on carryover payout

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. plans to clean up its 1989-model inventory with more generous cash rebates to consumers instead of its traditional 5 percent carryover allowance to dealers.

Ford officials say they are not planning any carryover allowance unless General Motors changes its policy. GM announced several weeks ago that it will not pay a 5 percent carryover allowance to dealers this year. Instead, GM instituted a program that pays dealers up to $1,000 per sale for performance against quota.

"Our philosophy has been to keep our dealers competitive; we've not chosen to announce a 5 percent carryover or any carryover rebate because we do not know what these incentive programs are going to do," said Ross Roberts, general manager of Lincoln-Mercury Division.

Ford's new incentive program offers a choice between cash rebates ranging from $300 to $4,000 and low financing, ranging from 2.9 percent for 24 months to 10.9 percent for 60 months. Roberts said Ford is planning to spend more money on incentives than it did in the last program, which ended July 31, but he would not specify what the company has allocated per car.

The new Ford program focuses on rebates. While many rebates have been sweetened, Ford has raised the annual percentage rates on its 36- and 48-month loans.

Low financing has become less attractive as interest rates drop, Ford said. Seventy percent of its buyers choose a rebate and many of those buyers are shopping for financing at their local banks, Ford said.

Roberts and Tom Wagner, Ford Division general manager, said Ford is not planning to offer any dealer contests, including salesperson and sales manager incentives, during the last quarter of the 1989 model year. Money normally used for those programs has been channeled into customer incentives.

Presently, Ford and L-M have a 66-day supply of cars and Ford has a 70-day supply of trucks, Wagner said. Ford would like to clear that inventory before 1990 models arrive this fall.

Despite what looks like a soft sales environment, Ford announced an average pre-sell price increase of 4.8 percent on its Ford, Lincoln, Mercury and Merkur models. The prices, which are subject to change, reflect the addition of new passive-restraint equipment and the higher cost for materials. On comparably equipped models, pre-sell prices have increased 2.5 percent.

"It (the effect on sales) really comes down to what kind of value the consumer assigns to passive restraints," said Wagner.

"The numbers (percentage increases on prices) are larger than they (consumers) have seen in the past, but we do have to cover our costs in terms of raw materials and the labor costs as well as the (passive-restraint) device costs. A short prescription for trouble is not to price for them," he said.

Ford's new incentive program, which began Aug. 1 and runs indefinitely, offers consumers a choice between cash rebates and low-interest financing.

The financing rates are 2.9 percent for 24-month loans, 6.9 percent for 36-month loans, 7.9 percent for 48-month loans and 10.9 percent for 60-month loans. The previous program offered 36-month loans for 5.9 percent and 48-month loans for 6.9 percent.

The following vehicles are being offered with a choice of rebate or cut-rate financing: $500 on all Probes and Mustangs equipped with 2.3-liter engines and manual transmissions; $600 on Festiva L, L Plus and LX models; $750 on Ranger S, Rangers equipped with automatic transmissions and Bronco II; $1,000 on Rangers

Sporty Corrado viewed as VW comeback car

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

CORONADO ISLAND, Calif. — Volkswagen's new Corrado G60 sports car means more to VW than classically conservative Wolfsburg-crafted lines and limited-edition status.

VW hopes to use Corrado to wrest the small-car market it once owned from Pacific Rim competition with a sports car priced near fire-sale levels.

The move, if successful, could nip away at market share and bolster VW's sagging image as a value leader.

"We will be moving to a more consumer-focused, value-focused product line," said William J. Young, vice president of Volkswagen United States. "Basically we are back in the marketplace rebuilding the company."

Young pegged the suggested base retail price of the 1.8-liter supercharged 2+2 coupe at $17,900. Options for the car — including anti-lock brakes, heated leather seats, sunroof and metallic paint — will likely push that price over the $20,000 mark.

The Corrado is the first VW vehicle introduced since Young took the sales helm in February. Young succeeded James Fuller who died in the crash of Pan-Am flight 103 in Scotland last December.

To kick off his tenure at VW, Young went on a 30-day tour across the country talking to dealers. Their message to him: Be aggressive.

Young said following the trip he instituted broad-based sales incentives and a long-term test drive program.

Of the 30,000 Corrados built for world consumption, VW officials predict they will sell 1,800 to 2,000 cars in calendar-year 1989 following its September introduction. They plan to sell 10,000 Corrados in its first full calendar year in 1990.

A value-leader sales approach is not typical — it is almost contradictory — for a production-constrained, limited-edition car aimed at the enthusiast market. Still, Young sees value marketing as VW's charge.

He did say, however, that the company will not abandon its German engineering campaign that has been the cornerstone of VW's advertising.

"As far as VW is concerned, we are not moving upscale in the product line. We are not going to try and convince the consumers they will have to give us a premium price because of the high level of technology in the car," Young said.

VW's demographic research suggests potential Corrado buyers are male, 18 to 34 years old, who want cars with sporting performance. They currently own, or have a history of buying, a European car, and their current vehicle dates from 1983 through 1987 and was bought new.

Many of the Corrado sales prospects own or have owned a VW Scirocco.

VW will advertise the Corrado with long-copy print ads.

Without disclosing specifics about the texture of its upcoming campaign, Young said part of the ad plan calls for the Corrado's price to be included: "We are talk-

see CORRADO, page 76

The sticker price for VW's supercharged Corrado G60 starts at $17,900.

Corrado growls with supercharger

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

CORONADO ISLAND, Calif. — Volkswagen's Corrado G60 coupe gives VW dealers their first new sport coupe since the Scirocco was dropped. The package carries VW's conservative family lines.

"The Corrado wears a VW style," a company official said. "You get the VW identity just from the way it looks."

But it is primarily what's under the Karmann-mounted skin that makes the Corrado unique in the production sports-car realm. Powered by a derivative of VW's ubiquitous 1.8-liter, fuel-injected four-cylinder powerplant, its technological advancement is a mechanically driven G60 supercharger, called the G-Charger.

Though performance results of supercharged and turbocharged engines

Chrysler trims perks in battle to slash costs

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Chrysler Corp. confirmed last week that it would indefinitely eliminate some traditional executive perks and a company-funded employee savings plan as part of its $1 billion cost-cutting plan.

A Chrysler Corp. spokesman said memberships to private clubs may be one of the items cut from the executive perk list. Chrysler may also delay the eligibility for such executive level perks for some high-level employees, the spokesman said.

Beginning Oct. 1, Chrysler will no longer contribute to a company-funded savings plan for employees. Currently, Chrysler's salaried employees can put a portion of their salaries into savings and the company contributes 50 cents in Chrysler common stock for every one dollar an employee saves. Only the first 6 percent of salary is eligible for the company's matching program, the spokesman said.

The spokesman declined to say how much the company hopes to save with the elimination of selected executive perks and the company savings program.

Two weeks ago, Chrysler announced a 15-month, $1 billion cost-reduction program, beginning in October. The plan includes the elimination of 2,300 white-collar jobs by early retirements, buyouts and layoffs.

In addition, 2,000 top executives are being asked to put into escrow during the 15-month cost-cutting period up to 10 percent of their salaries. Participants in the escrow program will receive half, double or none of the amount escrowed, depending on how well Chrysler does in meeting its $1 billion goal.

Chrysler said cost cutting is necessary to trim "fat" from the company's budget in the face of increasing costs and lower sales volumes.

Fitch Investors Service, New York, downgraded Chrysler's bond ratings as a result of the downward trend in U.S. sales and Chrysler's "reduced financial flexibility." Fitch lowered its ratings on Chrysler Corp.'s senior debt to BBB from A- and Chrysler Motors' senior debt to BBB+ from A. It continued to give Chrysler Financial an A rating on senior debt, A- on senior subordinated debt, BBB+ on junior subordinated debt and F-1 on commercial paper.

Automotive News wins lawsuit

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

ANN ARBOR, Mich. — A federal court has ordered Automotive Electronic News to eliminate either "Automotive" or "News" from its title by Oct. 1, 1989.

U.S. District Judge George LaPlata last Friday permanently enjoined Fairchild Publications, a division of Capital Cities/ABC Inc., from using both "Automotive" and "News" in the name of its publication following a 16-day trial.

Judge LaPlata ruled in favor of Crain Communications Inc., which publishes Automotive News, saying that subscribers and advertisers could confuse the names Automotive Electronic News and Automotive News.

However, Judge LaPlata ruled the infringement was not willful or malicious. No damages or attorney fees were awarded.

Judge LaPlata ruled that Automotive Electronic News can continue to use its editorial format, or appearance.

"This is an important victory for Crain Communications because it protects the Automotive News trademark," said Ray Scott, an attorney for Crain Communications.

There was no comment from Fairchild's attorneys.

Crain Communications filed the federal trademark infringement suit March 23, shortly after Automotive Electronic News began publishing.

Clarification

A July 31 legal brief failed to report that Bob Willow Motors of Menomonie, Wis., won treble damages from General Motors in an unfair termination case.

His lower court award of compensatory damages trebled to $1,203,000 plus interest of $253,631.72 and attorney fees of $107,597 were upheld by an appellate court, which also awarded him appeal attorney fees of $45,891.61. Willow did not win separate punitive damages nor reimbursement for expert witnesses.

Bob Willow Motors is still in business with Chrysler, Plymouth, Dodge truck, Jeep and Eagle franchises.

Dodge Stealth offers all-wheel drive and a twin-turbocharged engine.

Dodge plans '91 intro of Stealth sports car

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Motors confirmed last week that Dodge will market the Stealth, a sleek four-place sports car based on the Plymouth Laser/Eagle Talon platform, in the 1991 model year.

Mitsubishi Motors, which will build the car in Japan, also will offer a version of the sports car. Mitsubishi's Starion name will not be used on the new model.

Automotive News reported in late 1988 that Dodge and Mitsubishi would introduce a high-powered four-place "baby Ferrari" sports car in 1991 (Automotive News, Dec. 12, 1988).

The price of the Dodge Stealth is believed to be in the $25,000 range.

Last week a Dodge spokesman said the car will be a front-wheel-drive model with optional all-wheel drive.

Mitsubishi's 3-liter, 24-valve, naturally aspirated V-6 will be the base engine. An optional twin-turbocharged version will provide acceleration from 0 to 60 mph in "the low 5-second range," a Dodge spokesman said.

The Dodge Stealth, inspired by the Intrepid concept car that appeared on the auto show circuit, was designed by Chrysler Motors and engineered by Mitsubishi. The two automakers have worked on the project since 1987.

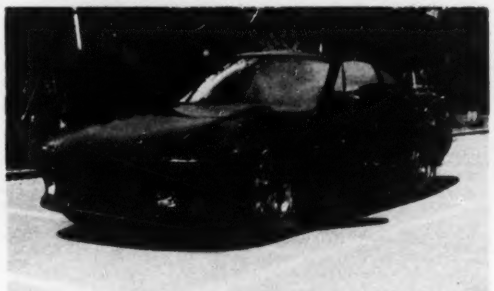
John Damoose, Dodge vice president, said Stealth will be the new lead image car for the division and an example of Dodge styling in years to come.

"Stealth will be the first in a series of new products over the next few years that will revolutionize the Dodge product line," he said.

No price or sales volume have been announced for Stealth, although one analyst estimated the price at $25,000.

Dodge said Stealth will be more upscale than the current Dodge Daytona but not as expensive as the Dodge Viper, an exclusive sports car Chrysler Motors tentatively plans to introduce in the 1990s.

According to Chrysler, the Stealth name was used on a navigational system on one of its concept vehicles in the mid-1980s. It was not adopted from the Stealth B-2 bomber currently being considered by the U.S. Congress, Chrysler said.



Mitsubishi's as yet unamed version of the Stealth may look similar to this drawing.

Subaru-Isuzu tells it like it is

Films show applicants that job is tough; many walk away

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

Workers at Subaru-Isuzu Automotive's assembly plant in Lafayette, Ind. — the newest transplant — can't say they weren't forewarned about the fast pace car production requires.

The discrepancy between the picture workers get of a Japanese transplant during orientation and the actual work in the factory has produced the first labor-management tension at several transplants.

Applicants for jobs at Subaru-Isuzu's new plant, scheduled to begin production in September, watch videos that show actual work tempo and reiterate the importance of "quick work pace" as well as quality. Applicants also participate in fast-paced work simulations.

A large number of Subaru-Isuzu applicants are screened out in the course of the selection process and about 10 to 15 percent screen themselves out after watching the videos, said Richard Wellins, senior vice president for programs and marketing at Development Dimensions International.

Development Dimensions International helped Subaru-Isuzu design its worker-selection process. The firm scripted the videos and designed the simulations.

Some workers at U.S. transplant facilities — particularly at Mazda Motor Manufacturing (U.S.A.) Corp. and Nissan Motor Manufacturing Corp. U.S.A. — have complained their orientation did not prepare them for the difficult work pace on the line.

A stern voice in the first video shown to applicants for jobs at Subaru-Isuzu says, "There is no slack time. Work tempo always remains fast and consistent." The voice also tells applicants they will be expected to pay attention "every minute," to "adapt to rapidly changing conditions," to hold quality meetings and clean up their areas on their own time and to work overtime and on weekends.

Applicants watch another video before they participate in an assembly simulation requiring 15 steps. The video repeats that they must "work at a quick work pace without wasting time or materials. . . . The pace is important. So is quality. . . . You may notice the assessor checking your pace."

Applicants must view a videotape showing the quick work pace.

Rapid-tempo background music drives home that theme. Applicants are told that, following the simulation, they will be expected to suggest ways to cut the time required to do the job, as is the case for workers in the plant.

Jeanne Wilson, a Development Dimensions International industrial psychologist and project manager for the Subaru-Isuzu selection process, said the process was not so much the result of publicized

BRIGHTER: *Decline in cost of borrowing may hike profits for automakers' finance firms*

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

As the automakers' finance companies head into the second half of 1989, falling interest rates give them a shot at a better — though not likely a record — year.

Rising interest rates — the rates at which the finance firms borrow the money to conduct their operations — narrowed their margins in 1988 and the first quarter of 1989. General Motors Acceptance Corp. and Ford Motor Co.'s financial services group each reported profit slumps of 20 percent for the second quarter, while profits at the more diversified Chrysler Financial Corp. fell just under 7 percent.

In the fierce scrambling for dealer and car-buyer financing, the captives' profits shrank though they captured bigger shares of auto financing volume.

Interest rates have dropped since the highs of last winter, which in-

Cadillac latest to charge dealers a mandatory ad fee

By Laura Clark and Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTERS

DETROIT — Cadillac will assess a mandatory 1 percent charge on each car's invoice for local dealer advertising beginning this fall.

Cadillac joins Oldsmobile, which also will collect the fee beginning this fall. They follow the lead of Chevrolet and GMC, which began assessing the fee a year ago.

The Cadillac program is patterned after those at other GM divisions. Cadillac's assessment is 1 percent of the manufacturers suggested retail price including options. It doesn't include destination charges, and it doesn't apply to GM employee discount vehicles.

Twenty-five percent of the assessment will be returned to dealers.

The fee applies to all Cadillacs except Allante, the division's flagship two-seater.

Peter Levin, director of advertising, said the division didn't include Allante because it didn't want to add marketing costs to the $56,000 car.

Levin said dealer ad groups can select their own advertising campaigns. Cadillac supplies ad groups with music and film footage, but they are not required to use it.

Oldsmobile requires dealer ad groups to use either the Oldsmobile themeline, music or footage to receive factory co-op funds.

While dealers can do what they want with the 25 percent refund, Cadillac strongly suggests dealers use it specifically to advertise their dealerships, Levin said.

Dealers who don't participate in dealer ad groups still will be assessed the 1 percent fee and refunded 25 percent of it. Cadillac will boost national advertising in local markets where dealers don't participate in ad groups.

While Oldsmobile expects its collections to rise from $58 million to more than $100 million annually under the 1 percent program, Cadillac would not reveal figures.

But Levin said its collections will increase at least 25 percent. He said many dealer groups already have increased per-car ad spending because Cadillac competitors have.

"Our dealers in general — and dealer marketing groups — were sensing this competitive challenge already in the last two years," Levin said.

"On their own, they already have increased their per-car contribution."

In addition, Cadillac will boost overall divisional advertising for the 1990 model year and will allocate more to dealer marketing than in 1989. Levin wouldn't reveal how much spending will increase.

Cadillac doesn't have a formula for its allocations to dealer ad groups as some divisions do. Levin said the division analyzes the market and appropriates the money on a case-by-case basis.

He said Cadillac decided to adopt the 1 percent program to keep pace with increased ad spending by competitors and to be consistent with its sister GM divisions, with which many Cadillac dealers are dualed.

So far, Buick and Pontiac maintain they won't mandate the 1 percent assessment, although corporate pressure to follow suit could eventually cause them to do so.

The divisions now encourage dealer ad groups to use the program, and several have signed up. A Buick dealer said 97 percent of Buick dealers will use the 1 percent system to collect local ad funds.

Pontiac has made only one change in its policy this year.

Pontiac told dealers recently they no longer can withdraw from a dealer advertising group at any time during the year. Instead, dealers have 15 days in January in which to withdraw.

The change is to prevent dealers from dropping out of ad groups on a whim.

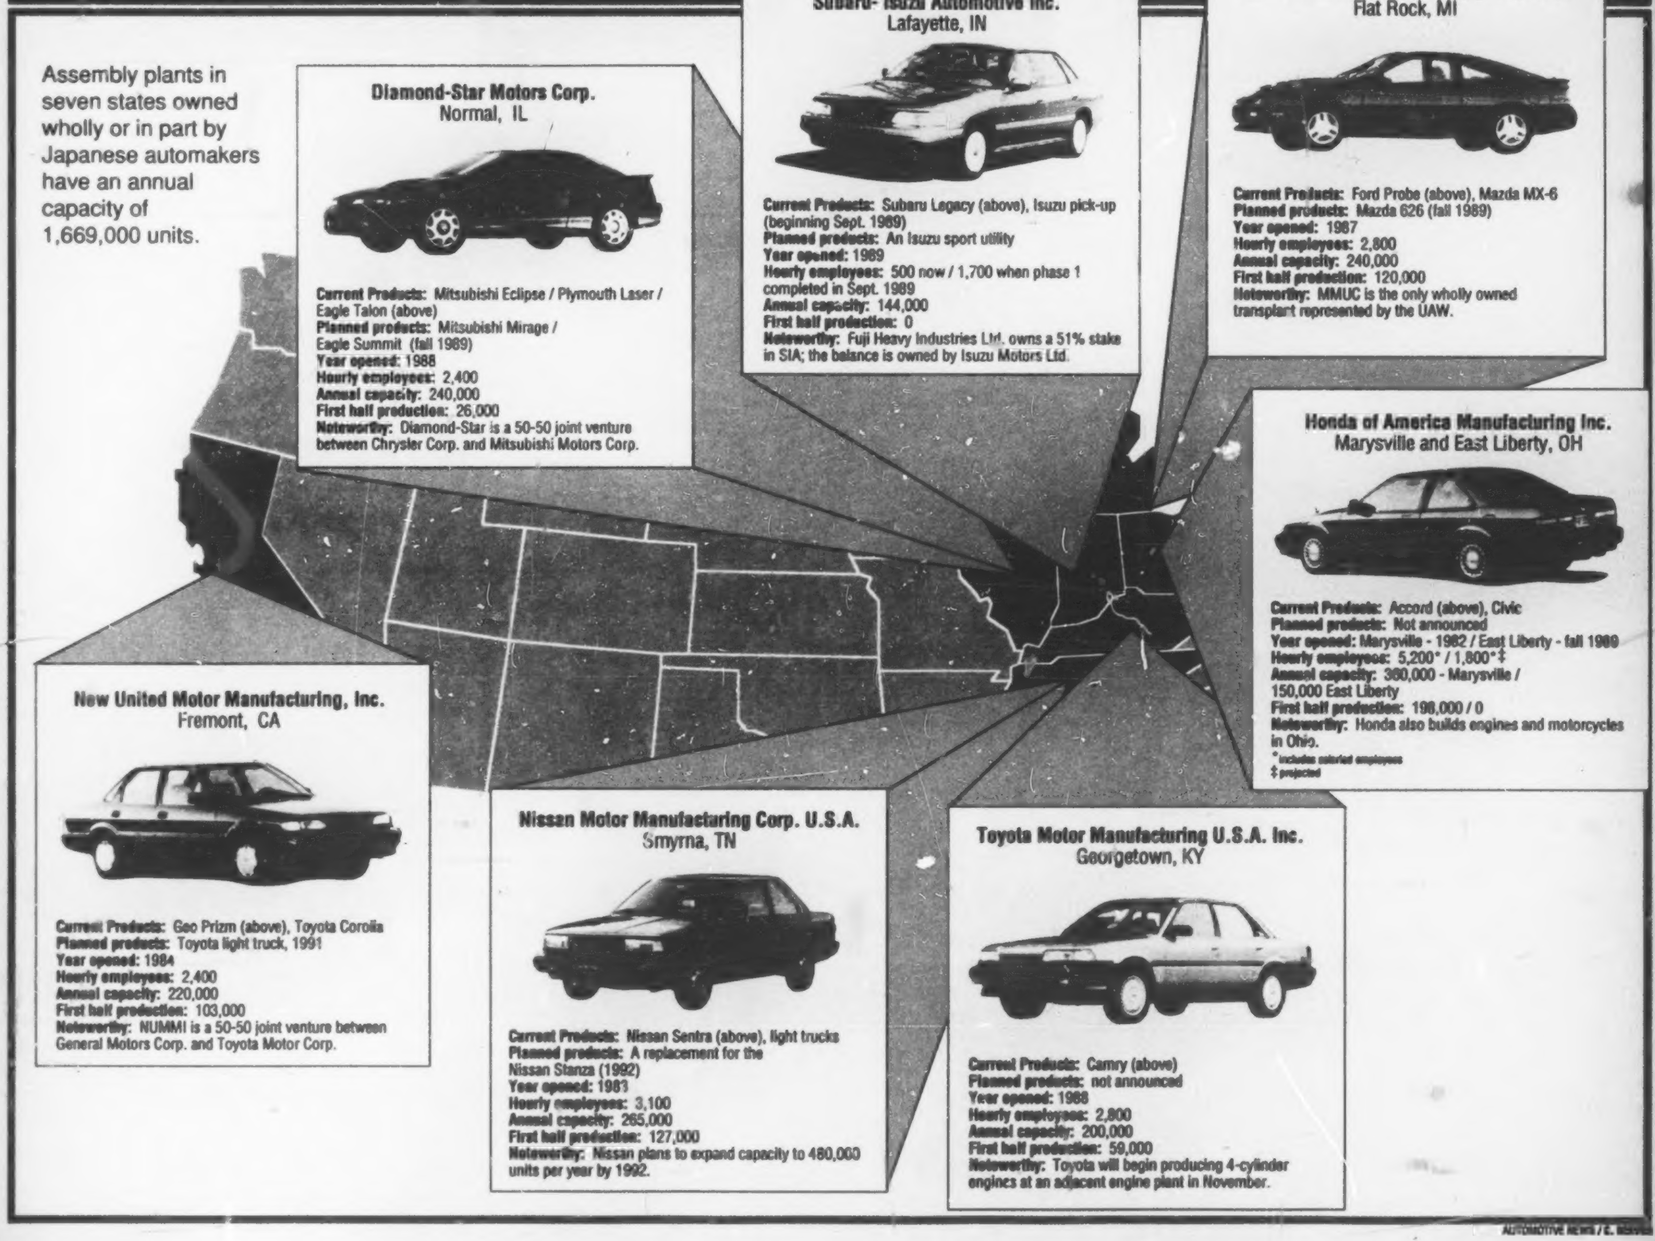
TRANSPLANTS ON STREAM

The transplant picture



Assembly plants in seven states owned wholly or in part by Japanese automakers have an annual capacity of 1,669,000 units.

Diamond-Star Motors Corp.
Normal, IL

Current Products: Mitsubishi Eclipse / Plymouth Laser / Eagle Talon (above)
Planned products: Mitsubishi Mirage / Eagle Summit (fall 1989)
Year opened: 1988
Hourly employees: 2,400
Annual capacity: 240,000
First half production: 26,000
Noteworthy: Diamond-Star is a 50-50 joint venture between Chrysler Corp. and Mitsubishi Motors Corp.

Subaru- Isuzu Automotive Inc.
Lafayette, IN

Current Products: Subaru Legacy (above), Isuzu pick-up (beginning Sept. 1989)
Planned products: An Isuzu sport utility
Year opened: 1989
Hourly employees: 500 now / 1,700 when phase 1 completed in Sept. 1989
Annual capacity: 144,000
First half production: 0
Noteworthy: Fuji Heavy Industries Ltd. owns a 51% stake in SIA; the balance is owned by Isuzu Motors Ltd.

Mazda Motor Manufacturing (USA) Corp.
Flat Rock, MI

Current Products: Ford Probe (above), Mazda MX-6
Planned products: Mazda 626 (fall 1989)
Year opened: 1987
Hourly employees: 2,800
Annual capacity: 240,000
First half production: 120,000
Noteworthy: MMUC is the only wholly owned transplant represented by the UAW.

Honda of America Manufacturing Inc.
Marysville and East Liberty, OH

Current Products: Accord (above), Civic
Planned products: Not announced
Year opened: Marysville - 1982 / East Liberty - fall 1989
Hourly employees: 5,200* / 1,800*‡
Annual capacity: 360,000 - Marysville / 150,000 East Liberty
First half production: 198,000 / 0
Noteworthy: Honda also builds engines and motorcycles in Ohio.
*includes salaried employees
‡ projected

New United Motor Manufacturing, Inc.
Fremont, CA

Current Products: Geo Prizm (above), Toyota Corolla
Planned products: Toyota light truck, 1991
Year opened: 1984
Hourly employees: 2,400
Annual capacity: 220,000
First half production: 103,000
Noteworthy: NUMMI is a 50-50 joint venture between General Motors Corp. and Toyota Motor Corp.

Nissan Motor Manufacturing Corp. U.S.A.
Smyrna, TN

Current Products: Nissan Sentra (above), light trucks
Planned products: A replacement for the Nissan Stanza (1992)
Year opened: 1983
Hourly employees: 3,100
Annual capacity: 265,000
First half production: 127,000
Noteworthy: Nissan plans to expand capacity to 480,000 units per year by 1992.

Toyota Motor Manufacturing U.S.A. Inc.
Georgetown, KY

Current Products: Camry (above)
Planned products: not announced
Year opened: 1988
Hourly employees: 2,800
Annual capacity: 200,000
First half production: 59,000
Noteworthy: Toyota will begin producing 4-cylinder engines at an adjacent engine plant in November.

PLANTS

FROM PAGE 1

an interest in the Japanese system, but what they really "wanted was a union-free environment."

The Japanese concept of a union-management relationship is a partnership, Inoue said; not a "buddy-buddy" system, but a partnership between two sides, with some tension between the two.

Americans tend to think the "Japanese worker is docile, like an obedient dog," Keio University Professor Haruo Shimada said. "That is wrong."

University of Michigan Professor Robert Cole said there are differences in the demands of Japanese and American unions.

Cole, who has spent the last year at Keio University in Tokyo, wrote a book called "Japanese Blue Collar" in the 1960s. He worked on a Japanese assembly line for research.

Cole said the Japanese have worked to maintain the seniority system while the Americans based their negotiations on a separation of skills. As a result, U.S. domestic operations have many times the job classifications of Japanese plants.

While there is a worldwide movement to adopt what has been called Japanese-style labor relations, Cole said to call it Japanese is not appropriate. Management now recognizes it must have the cooperation of labor, Cole said. That does not mean the union has to be in bed with management to accomplish the goal; it means the all-out confrontational system, where American managers will not listen to the labor force, will not work.

But there may be a backlash by some elements on the shop floor to labor-management cooperation.

Inoue said he is not surprised at the dissident movement within the UAW at Mazda's Flat Rock, Mich., plant or in other U.S. plants using Japanese-style team work practices. Those dissidents may be showing that they are fighting for the workers in the face of union-management collaboration. They think that cooperation is un-unionlike, Inoue said.

When dissidents won a union election at Mazda's Flat Rock plant recently, many were surprised. Shimada suggests Mazda may have moved too quickly to full production at Flat Rock in order to profit from an economy of scale.

Additional workers may not have been trained well enough, Shimada said, adding that communication of labor policies may not have been clear enough. Honda of American Manufacturing took seven to eight years to build up to capacity, while Mazda did it in two years. "It takes time," Shimada said.

Osamu Nobuto, president of the Mazda unit, doesn't agree with Shimada's assessment.

Mazda said the move to full production was not that rapid, and that Mazda has made an effort to keep the union informed of events and to talk to the union representatives on all issues.

"We really don't see very much change at all after the election," Nobuto said. "Rather, it appears that individuals who are popular with the work force were chosen. Although we didn't know at first if there would be any major change, so far it appears we will have very little change in the relationship.

"In fact, both Mr. (Phil) Keeling (president of Local 3000) and Mr. (Greg) Drudi (shop chairman) seem to be very good people. They are quite knowledgeable and understand very well the teamwork concept and 'kaizen' (the concept of continuous improvement)."

Nobuto said, in fact, that Drudi is the eighth highest contributor of suggestions, while Keeling is 18th on the list.

"In my conversations with them, they have pointed out that they are very enthusiastic about kaizen and teamwork. Although many things were said during the campaign, they are quite supportive of what we're trying to do here," he said.

In general, Japanese makers have tended to avoid direct contact with the UAW.

Toyota is officially neutral about the UAW's hopes to organize its plant in Kentucky. But Toyota may be expecting that UAW organization will fail.

"At this time, we believe our human relations and personnel policies are being well received by the employees," said Fujio Cho, president of Toyota Motor Manufacturing. "They can talk to us directly. We haven't heard of anything that would require a third party like the UAW to come in."

Toyota officials appear rather sanguine about the outcome of a union drive, perhaps because of good experiences with the UAW at the New United Motor Manufacturing Inc. plant in Fremont, Calif. But some say the UAW may have worked a little harder to cooperate there in order to emphasize past grievances with General Motos.

"This was an important experiment," said Kan Higashi, NUMMI president. "We can show, yes, it is workable using the most militant, lazy work force here at Fremont. Now, that work force is the most efficient, most cooperative, most innovative, sophisticated work force in the industry. Since we can do it, they can do it."

The UAW recently lost an election at Nissan's Smyrna plant by a two-to-one margin. Nissan had taken a more negative stance toward the UAW from the time it established the plant. Shimada said that was a result of the Nissan's long and difficult relationship with the Japanese union over the years, when the union leader, Ichiro Shioji, had virtual veto power over many corporate decisions at Nissan.

Nissan Motor Manufacturing President Jerry Benefield said, "If this election has a message, it says that you can achieve very high quality and good productivity and still have a very satisfied work force. If you allow people to participate in decisions and develop a relationship of trust, it can be done."

But among the transplants, not all are adverse to dealing with the UAW.

Diamond-Star's Nakane said, "I've heard many stories about the UAW, about how the UAW requested many things from the Big 3 and how the requests sometimes caused problems for managers. For me, those are just stories. We began negotiations with the UAW in April and we're trying to reach a consensus. I hope we get good results."

Automotive News Staff Reporters Mary Ann Maskery, Lindsay Chappell, Dutch Mandel and Jesse Snyder contributed to this report.

equipped with manual transmissions (excluding Ranger S), Taurus, Sable, Tempo, Tempo AWD, Topaz, Topaz AWD, Escort and four-door Tracer; and $1,500 on Thunderbird (excluding SC), Cougar (excluding XR-7) and Tracer two-door models.

The following vehicles are offered with rebates but no low-financing alternative: $300 on Aerostar; $500, F150 4x2 equipped with manual transmission and E150 van (non-converted); $750, F250 4x2, F350 (both 4x2 and 4x4 models), F Super Duty truck and full-sized Bronco; $1,000, Crown Victoria, Grand Marquis, E150 conversion vans and Continental; $1,500, Mark VII and Town Car; $2,000, 1989 Scorpio; $3,000, 1988 Scorpio; and $4,000, XR4Ti.

Ford is offering special lease incentives through its Ford Credit Red Carpet lease program. Lessors get a monthly rate of 2.75 percent of the cost of a vehicle for up to 24 months, 8 percent on leases between 25 and 36 months and 9 percent on leases between 37 and 48 months.

Lease rebates are offered on selected cars leased for 25 to 48 months: $750 on Escort, Tempo, Topaz, Taurus, Sable, Crown Victoria, Grand Marquis, Ranger, Bronco II, Aerostar, full-sized Bronco, Econoline van and Club Wagon; and $1,000 on Thunderbird and Cougar.

- In other incentive news, Cadillac sweetened its rebates on selected models delivered from dealer stock. Buyers of 1989 DeVille and Fleetwood models will receive $1,500 rebates until Sept. 27. The previous rebate on those cars was $1,000. Cadillac continues to offer $1,000 on all 1989 Seville, Eldorado and Brougham models.
- Also, Audi extended its lease program on 1989 models through Sept. 30. The program originally was scheduled to end July 31. Audi is offering 36-month leases with payments comparable to those traditionally available only with long-term leases or finance contracts.
- Mitsubishi also announced dealer incentives on 1989 models. During August, Mitsubishi will give cash awards for the number of 1988 and 1989 Mitsubishi pickups, vans, wagons and Monteros sold.

If the dealer sells six or fewer of those models, he receives $500 per vehicle; if he sells seven to 13 vehicles, he receives $1,000 per vehicle unit; and if he sells 14 or more, he receives $1,500 per unit (retroactive to the seventh unit sold). Vehicles sold at retail or leased are eligible for the dealer rebate.

The program will continue on those vehicles in September. Montero models, including lease vehicles, will receive an extra $1,000 bonus during September. There are no sales target requirements for the Montero September bonus.

Mitsubishi is offering a first-time buyer program in California from Aug. 1 to Sept. 30. It offers those buyers more favorable finance rates through Mitsubishi Acceptance Corp. No dealer incentive money will be paid on units sold through the California first-time buyer program.

During August and September, Mitsubishi will give dealers incentives on Mirage, Galant, Sigma, Montero, Wagon, Van, Starion, pickups and Precis. The payments are: zero to five sold, no payout per unit; six to 10, $800 per unit; 11 to 15, $1,000 per unit; 16 or more, $1,500 per unit retroactive to the 11th unit sold.

There is also a bonus program in August and September. For every three- and four-door Mirage sold, the dealer receives a $1,000 bonus; for every two-door Montero, $1,000; for every four-door Montero, $500; and for every three-door Precis, (except the PR24DL model), $300. There are no sales targets for the August bonus program.

CORRADO

FROM PAGE 2

ing price in the ads — it will be a component — because it is a factor."

To target younger buyers, VW will begin its advertising campaign with national and cable television spots, along with "screen vision" — movie-theater advertising. It will be VW's first attempt at using this medium in its marketing plans.

VW will also use direct-mail marketing. More than a half-million questionnaires will go to Corrado prospects, followed by a direct mail package that includes printed product literature and a Corrado video.

Each direct-mail recipient will also get an invitation to test drive the car. Both Young and William A. Gelgota, VW marketing director, declined to divulge Corrado's advertising budget.

Young well understands the need for the new Corrado — and, later, Passat and Golf Rallye — to be accepted by U.S. car buyers.

"We have to price our products to be competitive in this market," he said.

Young said if all goes as planned, the new Passat will be in dealers' showrooms at the end of February 1990, fitted with an optional automatic transmission. There is no introduction date yet for the high-performance Golf Rallye.

Young said that VW will do what it must to be successful in this country, a marketplace where the small-car segment is shrinking overall.

While the Corrado is an enthusiast's car, it is not a vehicle with enough mainstream appeal to immediately right the VW sales ship, Young said.

"What will rebuild the franchise is focusing the franchise back on value," he said.

G60

FROM PAGE 2

are similar, a supercharged engine is belt-driven. Both devices compress air into the engine's cylinders to increase performance, but the supercharger does so continuously, while the turbo relies on engine exhaust gasses.

One of the simple advantages of supercharging: the belt-driven boosted air pressure can be kept constant, making it easier to control.

VW strengthened the cylinder head and head gasket, pistons and wrist pins of the 1.8-liter engine to cope with increased engine output.

With the G-Charger, VW is able to generate substantial performance from the relatively small engine; it delivers 158 horsepower and 166 pounds-feet of torque and moves the car from zero to 60 mph in 7.5 seconds. VW pegs the top speed of the Corrado at 140 mph.

VW officials said there are no plans to introduce a four-wheel-drive version of the Corrado and no near-term plans to import an automatic-transmission model.

The Corrado G60's suspension is independent at all corners, with MacPherson struts up front coupled to coil springs and stabilizer bar. The rear suspension, a torsion beam axle with track-correcting bushings to enhance turn-in, is fitted with shocks, coil springs and stabilizer bar.

Corrado has the largest disc brakes VW has ever used, with the front discs vented for increased cooling. An anti-lock braking system is optional.

The Corrado is fitted with low-profile 195VR50/15 radial tires.

The Corrado's exterior is evocative of past VWs — no swoopy lines, no jelly-bean shapes. Penned by Volkswagen Design, the muscular-looking Corrado is built by Wilhelm Karmann GmbH, one of Europe's master coachbuilders.

Aerodynamic devices — including an integrated bumper and low front spoiler fitted with flush fog lights and headlamps; door-mounted mirrors; and a rear-bumper-mounted valance panel — help the Corrado achieve a low drag coefficient of 0.32.

One device the Corrado shares with the newly introduced Porsche Carrera 4 is a speed-actuated rear spoiler. It extends at speeds greater than 45 mph, and it retracts when the car cruises at speeds below 12 mph. The effect reduces aerodynamic lift on the car by as much as 65 percent.

Standard equipment on the Corrado includes air conditioning, height-adjustable seats, electrically adjustable and heated outside mirrors, rear window wiper and an anti-theft Heidelberg IV AM/FM cassette stereo with six speakers.

A new power window system allows both side windows to be opened or closed — even when the engine is turned off — before the driver opens the door to leave the car. Both driver and passenger windows have one-touch down actuation, and both can be closed from the outside by putting the key in the door lock and turning it beyond the lock position.

Corrado dimensions: wheelbase, 97.3; length, 159.4 inches; width, 65.9 inches; height, 51.9 inches; curb weight, 2,680 pounds.

July sales trail 1988 as imports falter

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

Sales of domestic cars rose slightly in July but could not offset import-car losses. Combined car deliveries were the leanest for any July since depressed 1982.

New-car deliveries lagged 1.63 percent behind last July's weak total when there were fewer factory incentives.

This year's total was 846,171 compared to 860,155 last year.

Sales of U.S.-built cars rose 0.14 percent, or 863 units above last July. This year's count was 603,409.

Even though more than a third of the import lines had year-to-year increases in July, import car sales fell 5.76 percent to 242,762 from 257,609, a year ago.

Audi posted a gain of 61.29 percent. In mid-July NHTSA vindicated the German car firm of unintended-acceleration charges.

On the domestic side, Ford Motor Co. and three Japanese transplants sold more cars in July than they did last year.

This year, the Big 3 U.S. automakers lost nearly a point of the U.S. car market.

With their captives, they took 67.15 percent of total car sales, down from 67.97 percent last July.

Ford boosted its combined car share by a point while General Motors' share dipped 0.42 percent and Chrysler Motors' share dropped 1.41 percent.

The Japanese manufacturers' share rose 1.73 percent, while European and Korean companies' combined shares dropped 0.91 percent from a year ago.

Although domestic-car sales improved in early July and mid-July this year, the final period fell 6.44 percent below last year's.

For the full month, Ford had an increase of 2.89 percent. Each of its divisions sold more cars in July than they did last year.

GM's U.S.-built car sales fell 3.61 percent although Buick and Pontiac reported gains. Chrysler's domestic-car sales slumped 14.07 percent from the total for July 1988.

Nissan was the only transplant to report a loss; it was down 1.42 percent in July.

Honda strengthened its deliveries by 15.93 percent and Mazda sold 24.78 percent more U.S.-built MX-6s in July. Toyota's domestic sales doubled last year's. Mitsubishi, which was not selling U.S.-built Eclipse models here in 1988, delivered 2,883 cars in July.

U.S. output edging back to normal

By Kathy Beyer
AUTOMOTIVE NEWS STAFF REPORTER

Weekly auto output continues to climb back to normal levels as summer model changeovers and vacation closures wind down.

Automakers scheduled assembly of 86,988 cars last week, 3.17 percent more than the prior week's 84,312 and 4.99 percent above the year-ago week's 82,853.

The year-ago week's output also was affected by downtime for model changeovers and vacations.

Companies split last week's targeted production as follows: General Motors, 22.43 percent; Ford Motor Co., 36.97 percent; Chrysler Motors, 14.71 percent; Honda of America Manufacturing, 8.75 percent; New United Motor Manufacturing Inc., 4.60 percent; Toyota Motor Manufacturing U.S.A., 4.22 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.01 percent; Diamond-Star Motors, 2.99 percent; and Nissan Motor Manufacturing Corp. U.S.A., 2.32 percent.

Truck output also is edging back to normal. The makers scheduled 73,784 units last week, 11.69 percent more than the previous week's 66,060 and 14.67 more than the year-ago week's 64,346.

Year-to-date, 2,582,353 trucks have been produced, 4.34 percent more than the 2,475,007 assembled at this time last year.

GM's Doraville, Ga., and Fairfax, Kan., plants were expected to resume output today after being idled by a material shortage. GM's Lansing, Mich., plant is slated to reopen this week after being closed for model changeover.

GM's Detroit truck plant remains closed until Aug. 21 for changeover. The Wentzville, Mo., plant resumed production last week after changeover downtime.

Three Ford plants were expected to reopen today. They are: Edison, N.J.; Twin Cities, Minn.; and Louisville, Ky. All three were idled because of slow sales.

GM closings cut Canadian totals

Five General Motors plants and two others were shut down for vacations and model changeovers in Canada last week causing production to drop significantly from the previous week's build.

Scheduled output of 11,909 cars last week dipped 24.35 percent from the prior week's 15,743 but nearly doubled last year's 6,162.

Truck production was targeted at 8,595 units last week, 31.68 percent below the prior week's 12,580 but 8.76 percent above the year-ago week's 7,903.

GM shut down all five of its Canadian plants last week for model changeover and vacation. Output is expected to resume Aug. 14 at Scarborough, Ontario, and the three plants in Oshawa, Ontario, and Aug. 28 at Ste. Therese, Quebec.

Toyota Motor Manufacturing Canada closed its Cambridge, Ontario, plant for vacation last week.

Volvo's plant in Halifax, Nova Scotia, also was idle for vacation last week.
